Introduction

This guide provides an overview of the features and functions of Akubela HyPanel Lite (**version 41.1.21.5**). Topics covered by this guide include but not limited to:

- Personalizing the system your way.
- Adding and controlling add-on Zigbee devices.
- Communicating with devices or family members using Hypanel Lite.

For more information about the products and operations, see appropriate guides at <https://knowledge.akuvox.com/>.

What's New

- Support for [changing date and time](#)
- Support for [configuring the function of physical buttons](#)
- Support for [controlling floor heat relays](#)
- Support for [controlling shade relays](#)
- Add [Home Automation](#) chapter
- Add [Security](#) chapter

- Optimize Home screen UI
- Optimize door unlock feature
- Change the function name from Emotional Bond to Contacts

Get Started

Your HyPanel Lite

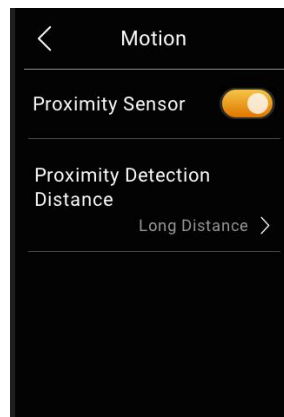

Wake and Unlock HyPanel Lite

You can quickly wake up your HyPanel Lite from the standby mode when you want to use it again.

Wake HyPanel Lite

To wake your HyPanel Lite, do one of the following:

- Tap anywhere of the screen.
- Approach HyPanel Lite to have it wake up automatically.
You can turn off this feature or adjust the approach-to-wake distance by swiping down from the top edge of the screen, then tap  > **Motion** > **Proximity Sensor** or **Proximity Detection Distance**.

Unlock the screen

If you've set up the screen lock, you need to unlock the screen by drawing a pattern before you can access the device.

1. Wake the HyPanel Lite.
2. Draw the preset pattern password.

If you did not set up the screen lock, see [Set up screen lock](#) section.

Interact with HyPanel Lite

Touch screen

To turn pages or move among options, slide on the touch screen.

To open the Control Center, swipe down from the top edge of any screens.

You can go to  > **User Guide** to see a detailed gesture instructions.

Physical buttons

To turn on/off the 2 connected relays, you can press the four physical buttons directly.

The upper 2 physical buttons are always to control relay 1 and the rest for relay 2.

Learn physical keypad settings

HyPanel Lite supports for directly wiring 2 devices, e.g., 2 lights, to its flush mounted module. These two devices are displayed as Relays on the All Devices screen.

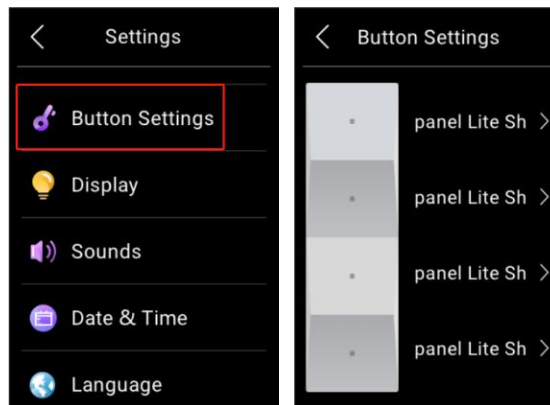

The relays can be controlled by the physical keypad. The upper two physical buttons of the keypad can turn the relay 1 on/off, and the rest two buttons control relay 2.

To see the function of each button, do any of the following:

- Swipe down from the top edge of any screen, and tap  > **Button Settings**.
- Press down and hold the fourth physical button.

You can configure the button function by going to  > **Button Settings**, selecting the desired button and tapping  to choose the relay or scene to be controlled.

Learn the server status

If some features of your HyPanel Lite do not work, you should firstly access the Connect Info to check if it disconnects with the cloud server.

1. Swipe down from the top edge of any screen, and tap  > **Connect Info**.
2. The status of your server connection displays.
 - Your device's connection status is normal if you see the screen below.

- Contact your service provider or Akubela technical team for help if you see Connection Error.

Personalize Your System

Connect to the Internet

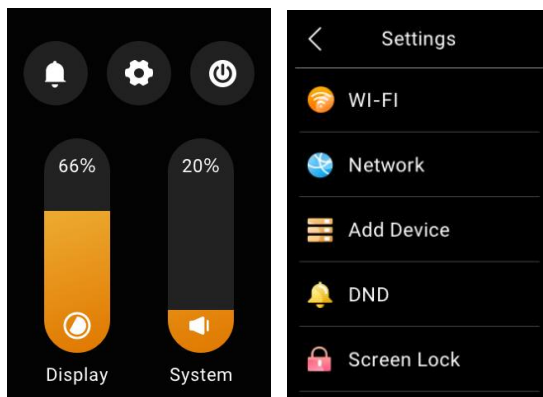

The network is usually configured by your service provider during the installation. You may be asked to connect to a network if you restore your HyPanel Lite to the installer settings. You can change the Wi-Fi network or connect the device to a local area network (LAN) anytime.

NOTE:

All panels within the family should be in the same local network to ensure the normal communication. If you need to use SIP call and BelaHome app's remote control function, panels must be connected to the Internet.

Change your Wi-Fi network

1. Swipe down from the top edge of any screen to open Control Center, and tap  > **Wi-Fi**.

2. Choose the network you want to join.
3. Enter the password if required, and tap **return > Join**.

Configure LAN network

You can configure a LAN network if needed.

1. Swipe down from the top edge of any screen to open Control Center, and tap  > **Network**.
2. On the Network view, do any of the following:
 - Toggle on DHCP feature, and the device will be assigned IP address automatically.

- Toggle off DHCP feature, and enter IP Address, Subnet Mask, Gateway, Preferred DNS Server, and Alternate DNS Server manually.

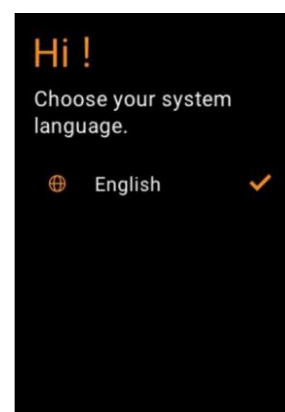

Change system language

The system language is set up by your service provider during the installation. You may be asked to select a language if you restore your HyPanel Lite to the installer settings. You can change the language to your preferred one at any time.

Swipe down from the top edge of any screen, tap  > **Language**.

NOTE:

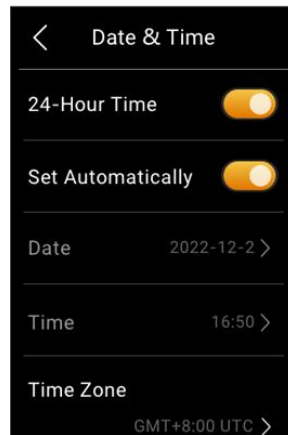

HyPanel Lite devices supports only English now.

Change the date and time

You are able to change the time zone, the date, and the time. The changes would be synced across all Akubela panels within the family.

1. Swipe down from the top edge of any screen, tap  > **Date & Time**.
2. Do any of the following:
 - Toggle on Set Automatically. The device gets the time over the NTP server and update to the time zone you're in.
 - Toggle on 24-hour time. The device uses the numbers 00:00 to 23:59 to tell the time.
 - Select the time zone.

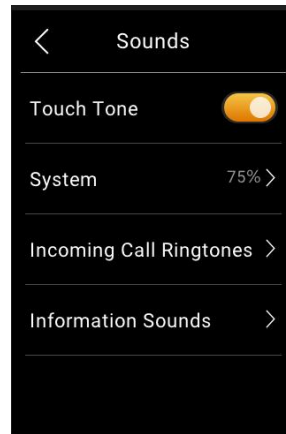

To change the time and date, toggle off Set Automatically, then set the time and date.

Set sound and ringtone options

You can change incoming ringtones and information sounds, and adjust the volumes of calls, alerts, clock alarms, touch tone, and notifications.

Change sounds and ringtones

1. Swipe down from the top edge of any screen, then tap  > **Sounds**.
2. On the Sounds screen, do any of the following:
 - Toggle the touch tone on or off .
 - Choose an incoming call ringtone.
 - Choose an information sound.

Adjust system volume

To adjust the volume, open Control Center, and do one of the following:

- Drag the system volume slider on the left side.

- Tap  > **Sounds** > **System**.

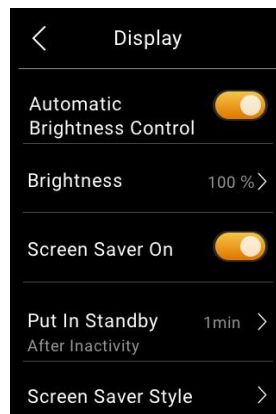

NOTE: If you want to mute all calls and notifications, see [Set up Do Not Disturb](#) section in this guide.

Put HyPanel Lite in standby mode

The Standby mode helps to keep your HyPanel Lite secure and save battery power. To put HyPanel Lite in the standby mode quickly, swipe down from the top edge of any screen to open Control Center, then tap .

You can customize how long the device takes to enter the standby mode by opening **Control Center**, and tap  > **Display** > **Put in Standby**. For example, if you choose 1 min, then HyPanel will enter standby mode in 1 minute of inactivity .

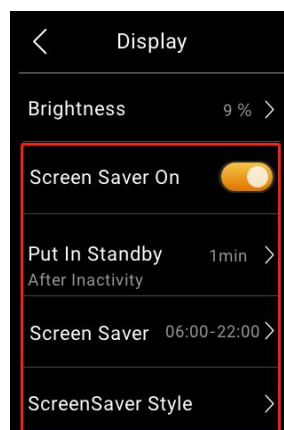

Change screen saver settings

In Display Settings, you can turn the screen saver on or off, and choose the screen saver style.

1. Swipe down from the top edge of any screen, then tap  > **Display**.
2. Do any of the following:
 - Turn on or off the screensaver feature by moving the toggle next to **Screen Saver On**.
If it is on, HyPanel Lite in the standby mode will display photos and images. You can upload your favorite photos from the BelaHome app.
 - Choose a **Screen Saver Style** from three options. Note that the preset images can only be played when you choose the style below.

- Schedule the screensaver to turn on automatically by selecting **Screen Saver**.

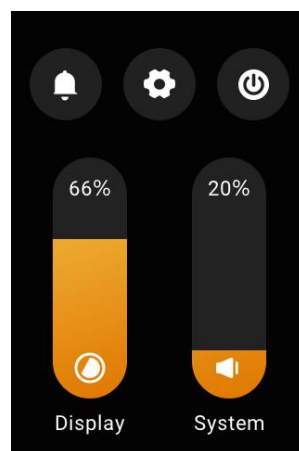

Adjust the screen brightness

You can manually adjust the screen brightness level, or turn on the Auto Brightness feature to let our HyPanel Lite automatically adjust brightness based on the current lighting conditions.

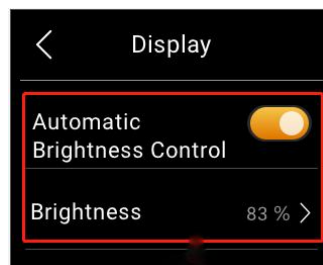

Quickly adjust brightness in Control Center

Swipe down from the top edge of any screen to open Control Center, and drag the Display slider up or down to adjust brightness.

Adjust brightness automatically when lighting changes

Swipe down from the top edge of any screen, tap  > **Display**, then toggle on **Automatic Brightness Control**.

Set up Do Not Disturb

If you do not want to be disturbed by calls or notifications, you can turn on the Do Not Disturb (DND) feature. In this case, except for the alarm clock, you will not hear any call or notification sound.

Quickly Turn DND on or off

You can manually turn the DND feature on by swiping down from the top edge of any screen, and tapping . The icon will turn to  when the DND is on. Tap the icon again to turn the DND off.

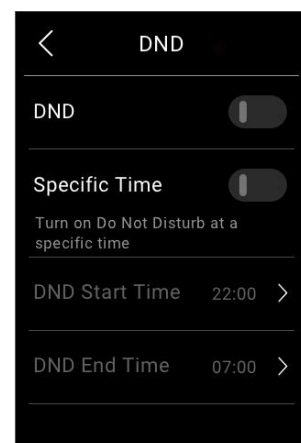

Schedule the DND to turn on automatically

To schedule a DND to turn on automatically at certain times, do as the following:

1. Swipe down from the top edge of any screen, and tap  > **DND**.
2. Move the toggle next to **DND** to On.
3. Toggle on **Specific Time**, then set the start time and end time.

Once you set the times, all the calls and notifications will be silenced during this period.

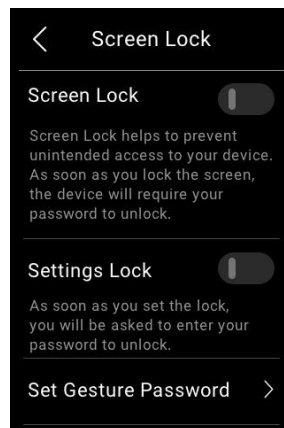

Protect your HyPanel Lite

For better security, use screen lock or settings lock to prevent unintended access to your device or the settings screen. The device will require your password to unlock.

Set up screen lock

Set a pattern that needed for unlocking the screen when you wake it.

1. Swipe down from the top edge of any screen to open Control Center, and tap  > **Screen Lock**.
2. Move the toggle next to **Screen Lock** to on, and follow the onscreen instructions to set up a pattern password.

Set up settings lock

Use settings lock to prevent unwanted access to the Settings screen .

1. Swipe down from the top edge of any screen to open Control Center, and tap  > **Screen Lock**.
2. Move the toggle next to **Settings Lock** to on, and follow the onscreen instructions to set up a pattern password.

NOTE:

The Screen Lock and the Settings Lock share a same pattern password. When both of the locks are enabled, you only need to draw the pattern

password once to access the device and the Settings screen.

If you forget the password, on the password required screen, tap **Forgot Password** at the bottom, or go to **Control Center** >  > **Screen Lock** > **Set Gesture Password** > **Forgot Password**, and follow the onscreen instructions.

Manage Devices

Add Zigbee devices

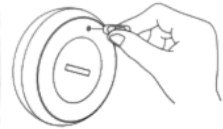

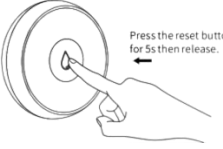

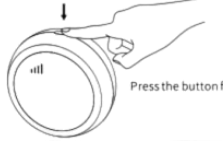

HyPanel Lite can connect to many Zigbee devices, such as sensors, emergency button, smart switch, and more. For example, you can add and fit a CO sensor in your kitchen to identify carbon monoxide leaks.

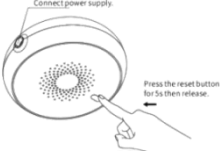

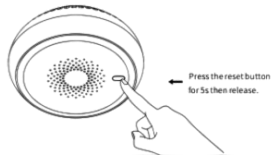

NOTE:

The transmission distances of Zigbee signal may vary by environmental characteristics and more. We recommend using Zigbee sensors, buttons, and switches, which send their commands to the panel, mainly in the same room HyPanel Lite is in.

Put devices in pairing mode

Before pairing the Zigbee devices with the HyPanel Lite, you should know how to put them in the pairing mode.

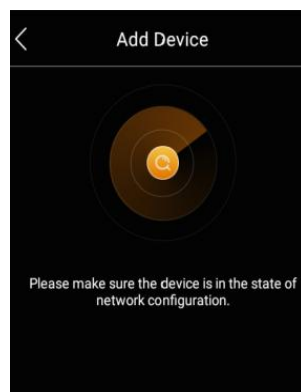

Zigbee device	How to put it to the pairing mode	
	Insert a pin into the reset hole at its back cover for 5 - 10s until the green light flashes quickly.	
	Press and hold the reset button on the front for 5 - 10s until the green light flashes quickly.	 <p>Press the reset button for 5s then release.</p>
	Press and hold the reset button on the side for 5 - 10s until the signal icon flashes quickly.	 <p>Press the button for 5s.</p>

<p>Smart Motion Sensor</p> 	<p>1. Rotate the battery cover anticlockwise to open. 2. Press and hold the reset button for at least 5s until the green light flashes quickly.</p>	
<p>Smart Gas Sensor</p> 	<p>Press and hold the reset button on the front for at least 5s until the green light flashes quickly.</p>	
<p>Smart Smoke Sensor</p> 	<p>Press and hold the reset button on the front for at least 5s until the green light flashes quickly.</p>	

To put devices not listed here in pairing mode, you can refer to their manuals.

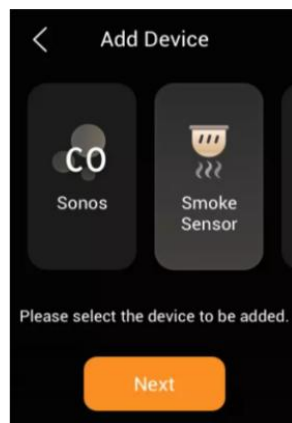

Pair devices with HyPanel Lite

1. Swipe down from the top edge of any screen to open Control Center, and tap  > **Add device**. HyPanel Lite will search for the nearby devices.

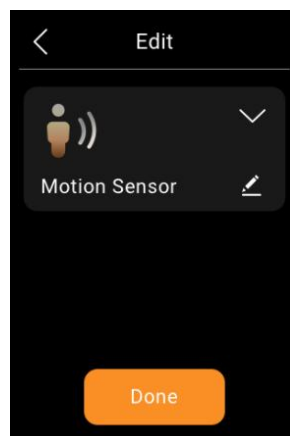

2. Put the Zigbee device you want to add in pairing mode.

3. The screen displays the searched device. Select it, and tap **Next**.

4. Name the device and choose its location, tap **Done > Next**.

5. The newly added device will be showed on All Devices screen.

See device information

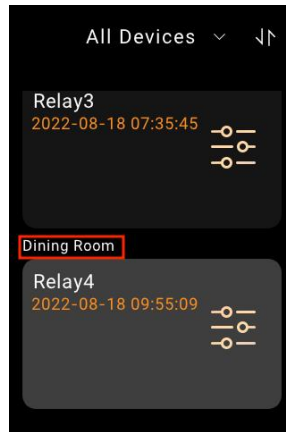

HyPanel Lite allows you to see all the added devices and check their information, including their connection status and locations.

Check if the device is connected

1. On the Home screen, and tap **Devices** .
2. Find the desired device. Check the status icon next to the device name. Offline devices have an orange icon  next to their names, which means the device is offline and can not function. Online devices have no such an icon.

See where the device is located

Wake up your HyPanel Lite, and tap **Devices** . The location where a device is installed is showed above the device name.

Filter devices by locations

You can see the list of devices in each room easily by using the filter.

1. Wake up your HyPanel Lite, and tap **Devices** .
2. Tap  next to All Devices at the top of the screen.

3. From the drop-down list, select the room you want to see the devices installed in it.

Customize the All Devices screen

Rearrange the devices

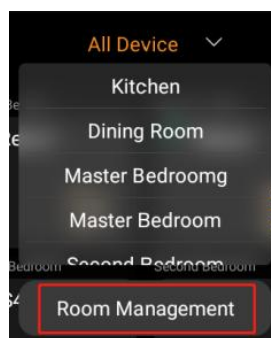

You can rearrange your devices to have them display in the order you want.

1. Wake up your HyPanel Lite, and tap **Devices** .
2. Tap  at the upper right corner.
3. Touch and hold the device, and drag it to the place you want.
4. When you're finished, tap  once again.

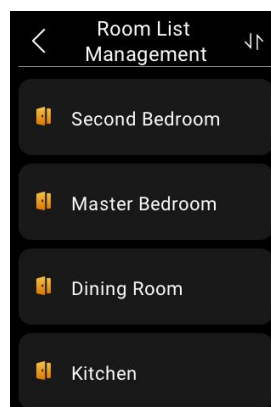

Reorder the room list

If you prefer your rooms in alphabetical order, or in the order you choose them as a routine, do as the following to rearrange them.

1. Wake up your HyPanel Lite, and tap **Devices** .
2. Tap  next to All Devices, and select **Room Management** from the drop-down list.

3. Tap  at the upper right corner.

4. Hold, drag, and drop the rooms in the order you want.
5. When you're finished, tap  once again.

Control devices

Control relays

HyPanel Lite supports for directly wiring 2 devices, e.g., 2 lights, to its flush mounted module. These two devices are displayed as relays on the All Devices screen.

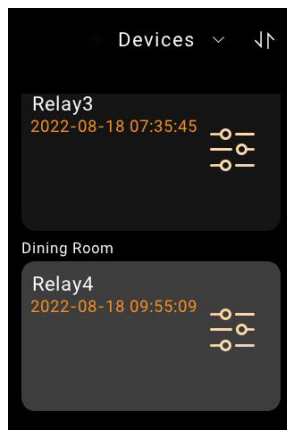

You can control the relays from the Devices screen or by the physical buttons.

NOTE:

The upper two buttons are to turn Relay 1 on/off, and the rest two for Relay 2. To change the function of each key, swipe down from the top edge of a screen, and select  > **Button Settings**.

Turn on/off switch, siren, door, and light relays

On the Devices  screen, tap the relay you want to open. Its background turns to be highlighted, indicating that the relay is turned on.

To close the relay, tap it again, and its background dims.

Control floor-heat relays

You are enabled to open/close the underfloor heating, and adjust its preset temperature easily.

To turn on the floor heat and enable it to auto-adjust to the preset optimal warmth, tap **Devices** , then tap the desired floor heat device. Its background turns to be highlighted, indicating that the relay is turned on and is auto-adjusting.

You can also adjust the preset temperature by tapping  or  button.

To close the floor heat and exit the auto-adjustment, tap the device again, and its background goes back to be dimmed.

Control shade relays

1. Go to Devices , and find the desired shade relay.
2. Do any of the following:

- Tap  to open the shade.
- Tap  to close the shade.

The whole opening and closing processes both last for 20 seconds by default.

- Tap  to stop the shade when it reaches the position desired.

NOTE:

The relay 1 is to open the shade, and relay 2 to close it by default. If you get the wiring in reverse, you can go to BelaHome app and tap **Devices > the shade relay >  > Swap function.**

Control plugs

To turn on your smart plug, on All Devices screen, tap the plug. Its background becomes highlighted, indicating that it has the power. To cut the plug's power, tap it again, and its background dims.

Home Automation

Scenes lets you control your smart devices based on an action, an event, a schedule, or with a simple tap. You can run a scene on the panel, BelaHome app, and the user web portal.

NOTE:

Before you can automate your home devices using Scenes feature, you need to create scenes on the user web portal. You can also edit and delete scenes, and see related logs on this online website. For detailed instruction, see [Features and Functions of User Web Portal](#).

Activate your scene

Automation scene types

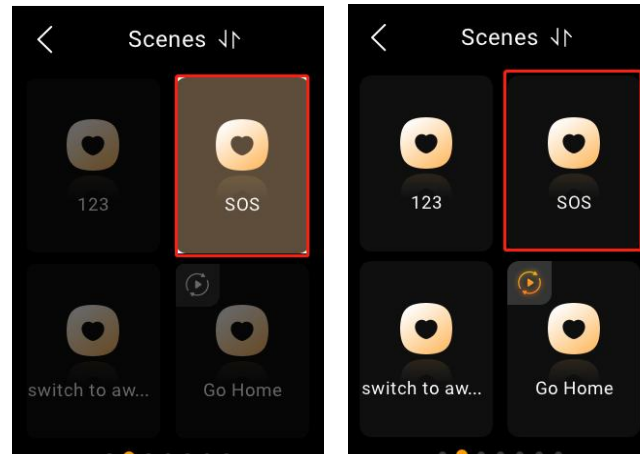

The Scenes screen displays all scenes within the family.

The following are three types of automation scene and their symbols:

- **A scene with auto condition(s)** : it can be activated based on a schedule or an event.
 - If the icon is orange , it means the scene will auto-run as long as its preset conditions are met.
 - If the icon is white , it means the scene cannot auto-run even if the conditions are met. To enable the auto-run feature, just tap the icon.
- **A scene with the manual condition:** is a scene set to be activated based on a tap or click on the scene image. This type of scene has no additional symbol.
- **A scene with both auto and manual conditions:** a scene based on a schedule, an event, and a tap or click. When any of the conditions is met, the scene will be activated. This type of scene also has an icon  at its top left corner.

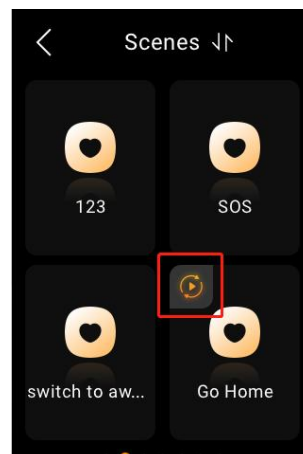

Run a scene with manual activation conditions

On the Scenes screen, to activate a scene with manual conditions, just tap it. Its background will be highlighted and then back to be dimmed to show that the scene is activated.

Run a scene with time or action conditions

You do not have to do anything to run an auto scene. Once the preset conditions are met, the scene is activated automatically.

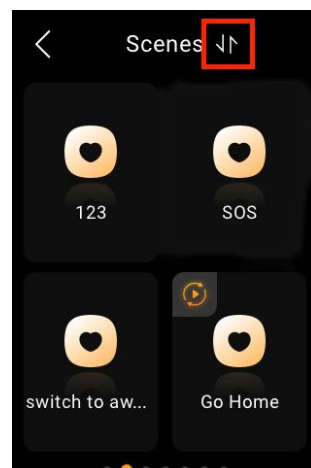

Customize the Scenes screen

You can rearrange your scenes to have them display in the order you want.

1. Tap **Scenes**  on the Home screen.

2. Tap  next to the Scenes title and it will become orange.

3. Touch and hold the desired scene, then drag and drop it to the place you want.
4. Tap the  again once you finish.

Security

Security modes are used to safeguard your home. For example, when you're away, you can put your system in Away mode to safeguard your home.

NOTE:

You need to configure three default security modes, or create custom modes on the user web portal before the feature can function properly. For detailed instruction, see [Features and Functions of User Web Portal](#).

Arm your home

You need to set up default security modes or create your own modes on the user web portal so that you can arm your system.

To arm your home, do as the following:

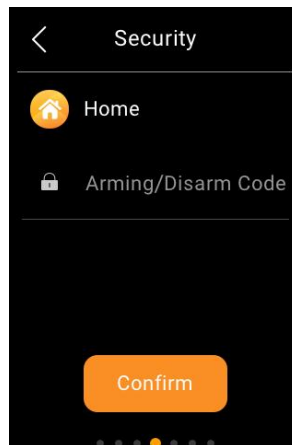

1. On the Home screen, swipe left to find **Security** .

2. Tap the desired mode.

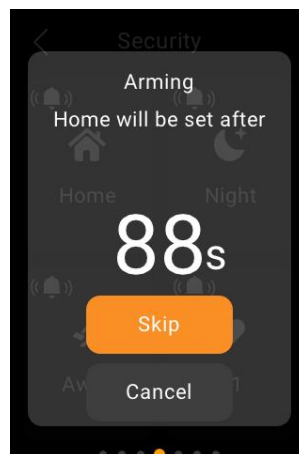

3. Enter the arming code (by default is 0000), and tap **Confirm**.

4. Wait for the arming count down to the end. Or tap **Skip** to arm your system right away.

NOTE:

The arming delay time can be modified on the user web portal.

5. Once the system is armed, the selected security mode is highlighted.

Disarm your system

To disarm your system, tap the highlighted mode again, and enter the disarm code which is 0000 by default. You'll know the system is disarmed when the mode turns back to be black.

Deal with an alarm push

When your system is armed in a security mode and any included sensor triggered, the system will push an alarm to the panel and BelaHome app.

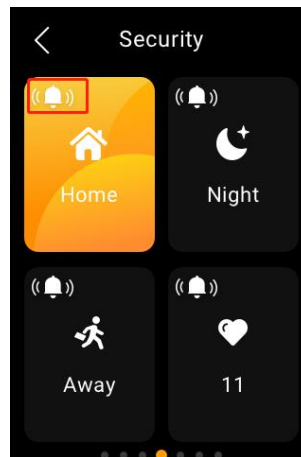

To stop the alarm once you make sure your home and family are safe, tap **Disarm** and then enter the preset code (By default is 0000). Your system is still armed in the security mode after the alarm is dealt with.

Disable alarm siren and alarm push

By default, your HyPanel Lite sounds the siren and push the alarm when a sensor in the mode is triggered. You can silence the siren and ban the alert push on the panel.

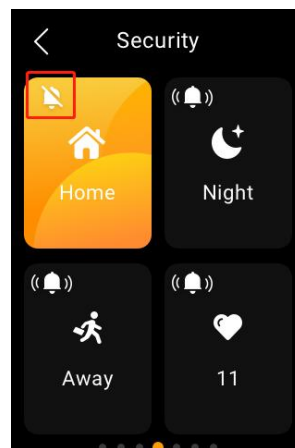

To make the alert silent, do as the following:

1. Find the desired security mode, and tap .

2. Enter the code which by default is 0000.

3. The siren feature is disabled when you see the icon turns to .

To enable the siren, tap , and enter the preset code.

Energy

Use the Energy feature to track the power consumption of your devices, rooms, and whole home.

NOTE:

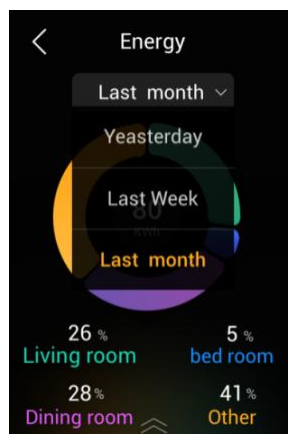

The Energy feature only applies to smart devices that support energy data collection.

1. On the Home screen, swipe left and tap **Energy** .
2. On the Energy screen, you can see yesterday:

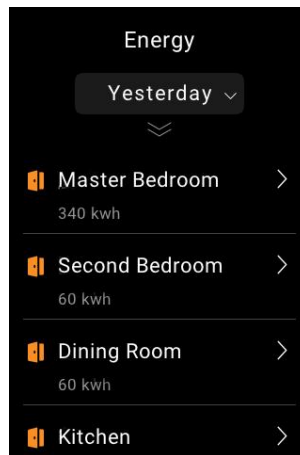

- The whole home power usage data showed in the center of the circle.
- Top 3 power consumers.
- The rest of rooms' total energy consumption (Other).

3. To see energy consumption of last week, or last month, tap  next to the time period.

4. To track each room's power usage, swipe up from the bottom of the screen. The details screen opens.

5. To track each device's power usage in a room, tap  next to the room name. The room's details screen opens.

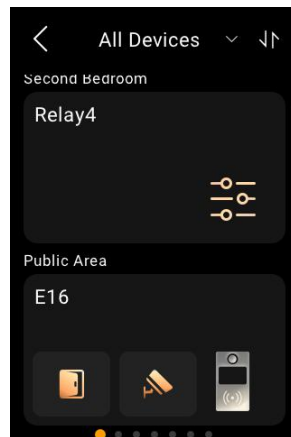

Intercom

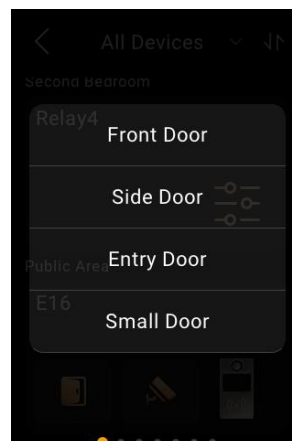

Unlock the door remotely

When you are upstairs and your visitor rings, you can unlock the door on HyPanel Lite without having to rush down to the intercom.

1. Select Devices  on the Home screen.
2. Find the desired door phone, and tap .

If there are multiple doors connected to the door phone, select the desired one from the pop-up list.

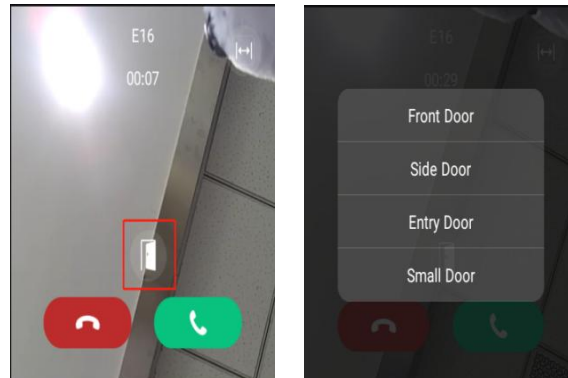

3. The screen displays Door opened.

Unlock the door before answering a call

When receiving a call from the door phone, you will see its monitoring stream if it has a camera.

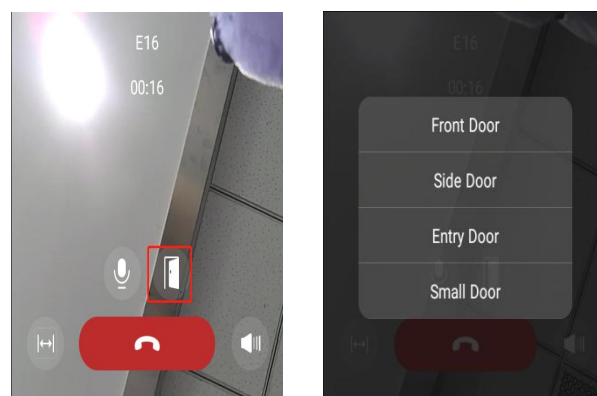

On the preview screen, tap  to open the door. If there are multiple doors connected to the door phone, select the one from the pop-up list.

Unlock the door during a call

You can answer the door phone call and unlock the door during the call.

On the talking screen, tap  to open the door. If there are multiple doors connected to the door phone, select the one from the pop-up list.

Communication in Family

You and your family members can make calls with each other, and send and receive messages at any time through HyPanel Lite.

Make one-to-one voice calls

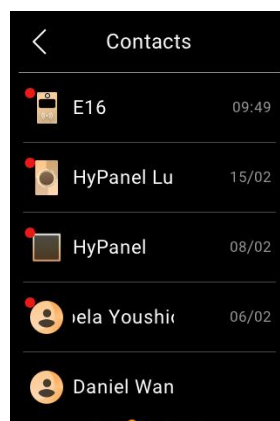

You can call any device, including the door phones, in your family, or family member's through HyPanel Lite. You can also receive their calls on HyPanel Lite.

To make calls, do as the following:

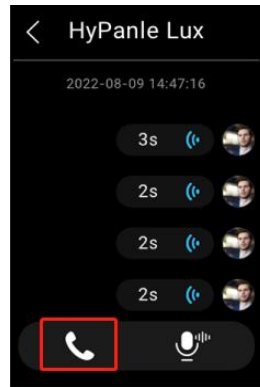

1. Select **Contacts**  on the Home screen.

2. Select the family member or device you want to call.

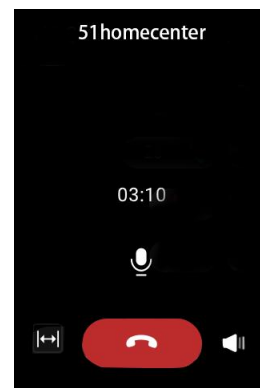

3. On the conversation screen, tap .

What else you can do on the voice call screen:

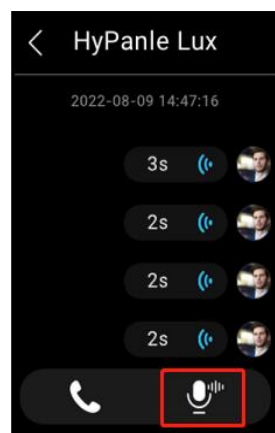

- Tap  to silence your microphone. Doing so, the called will not hear your voice.
- Tap  to adjust the volume.
- Tap  to hang up the call.

Send audio messages

HyPanel Lite allows you to send and receive voice messages.

1. Tap **Contacts**  on the Home screen.
2. Select the member or device you want to sent messages to.
3. In the conversation, tap and hold  at the bottom right to record an audio message. Each message should be within 30 seconds. To cancel before sending, slide your finger to the left while you are recording.

4. Lift your finger to send the message.

See text messages

HyPanel Lite allows you to see text messages sent from BelaHome App or SmartPanels. However, you cannot send messages through HyPanel Lite.

To see received text message, go to Contacts screen, and select the contact.

Timer and Alarm Clock

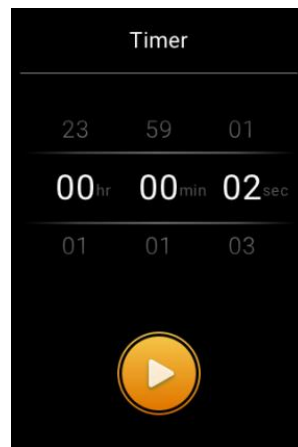

Set a timer

Use the timer to count down from a specified time.

1. On the Home screen, swipe left and select **Timer** .

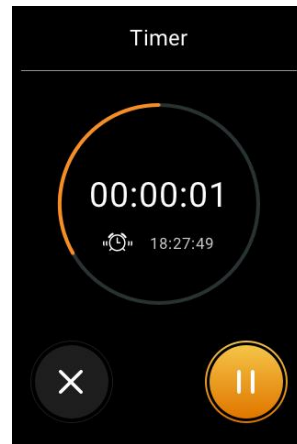

2. Set the duration of time, then tap .

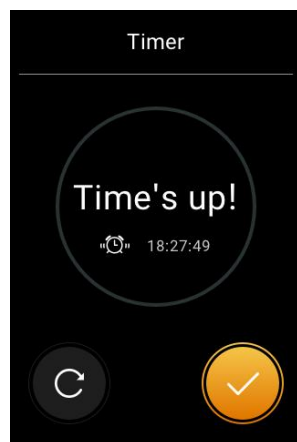

If you want to stop the running timer, on the countdown screen:

- To pause the timer, tap .
- To cancel the timer, tap .

When your timer finishes, tap  to go back to the previous screen. To restart this timer, tap .

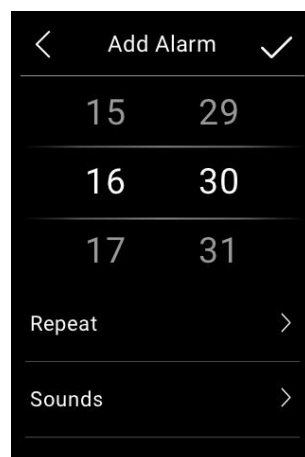

Set an alarm

Set an alarm clock

1. On the Home screen, swipe left, and select **Alarm Clock** .

2. Tap  at the top right.
3. Set the time, then choose any of the following options:
 - **Repeat**: Choose the days of the week.
 - **Sounds**: Choose a ringtone.
 - **Snooze**: To delay the alarm for a few minutes.

4. Tap  at the top right to save it.

To cancel an alarm, move the toggle next to the alarm time to .

Edit or remove an alarm clock

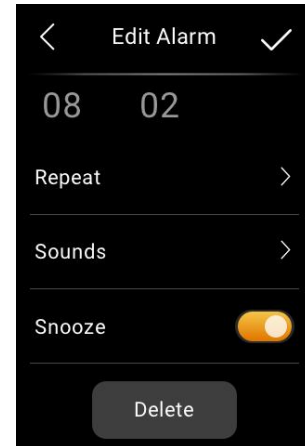

1. On the Home screen, swipe left, and select **Alarm**

Clock .

2. Tap the desired alarm.

3. On the Edit Alarm screen, do any of the following:

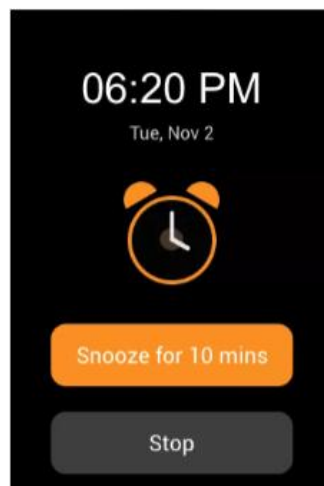

- Change the repeat time on the alarm clock.
- Change the ringtone.
- Turn the snooze on or off.
- Delete the alarm clock.

Snooze or stop an alarm

When your alarm rings, do one of the following:

- Tap **Snooze** to delay the alarm for 10 minutes.
- Tap **Stop** to turn off an alarm.

Update, Restart and Reset

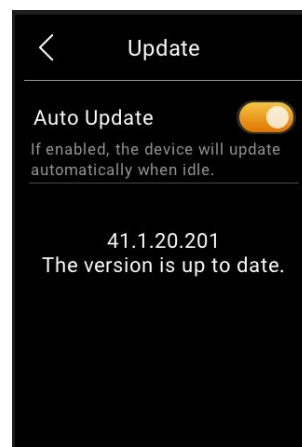

Update the system

To update HyPanel Lite to the latest version, swipe down from the top edge of any screen to open Control Center, and tap  > **Update**. On the Update screen, do any of the following:

- Toggle on **Auto Update** to update the firmware automatically. When an update is available, HyPanel Lite downloads and installs it automatically.
- Tap **Update** to manually download and install updates. When Auto Update is off, the system pushes the available update to the device, and it only installs the latest version with your consent.

NOTE:

If your system already installs the latest version, the screen shows no Update button.

Restart your HyPanel Lite

To restart the system, do any of the following:

- Poke the reset hole at the short side edge(as shown in the picture) with a paperclip or needle for about 3 seconds until the display turns off.

- Swipe down from the top edge of any screen to open Control Center, and tap  > **Reboot & Reset > Reboot.**

Restore HyPanel Lite to installer settings

You can restore HyPanel Lite to the settings that are configured by your installer.

1. Swipe down from the top edge of any screen to open Control Center.
2. Tap  > **Reboot&Reset > Reset to Installer Setting.**

Privacy Policy

As you use our services, you're trusting us with your information. We keep working hard to protect your data. The Privacy Policy is meant to help you be clear about what information we collect, why we collect it, and how you can protect your privacy.

To read the Privacy Policy, do as the following:

1. Swipe down from the top edge of any screen to open Control Center.
2. Tap  > **About** > **Privacy Agreement**.
