About This Manual

WWW.AKUVOX.COM

AKUVOX S565 INDOOR MONITOR

Administrator Guide

Thank you for choosing the Akuvox S565 series indoor monitor. This manual is intended for administrators who need to configure the indoor monitor. This manual is written based on firmware version 565.30.10.416, and it provides all the configurations for the functions and features of the S565 series indoor monitor. Please visit the Akuvox forum or consult technical support for any new information or the latest firmware.

Product Overview

- 10"touch screen with 1280x800 resolution
- Stylish industrial design
- Two-way audio communication
- Built-in Wi-Fi(Optional)
- Comply with SIP standard for easy integration with SIP-capable PBXes
- Eight-channel inputs and one built-in relay
- Powered by PoE or external source
- Support US or European electrical wall box mounting
- Desk mount available

Changelog

What's new in version 565.30.10.416:

- [Support synchronizing arming and alarms to other indoor monitors in the same room.](#)
- Support displaying the door-opening source(indoor monitor) on the SmartPlus App when users open doors on the device.

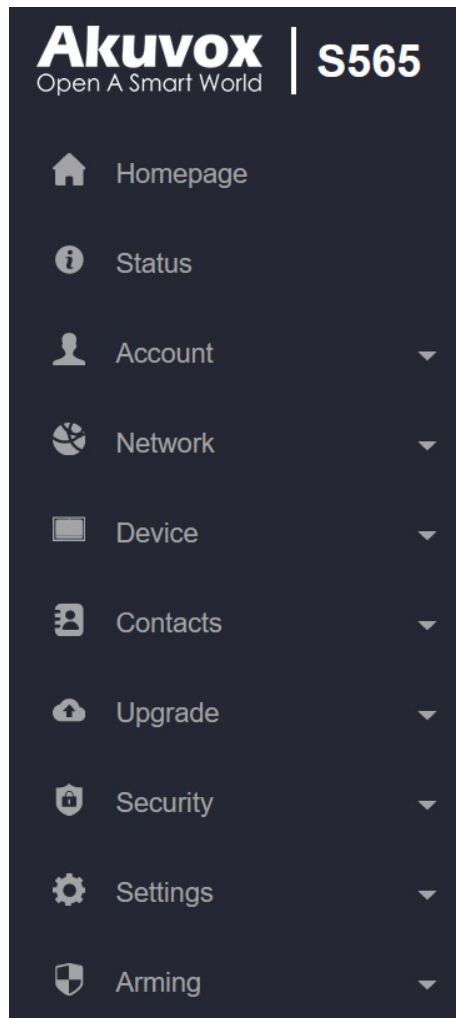

Click [here](#) to view the changelog of the device's previous versions.

Model Specification

Resolution	1280 x 800
Indicator	x1
MIC	x2
Speaker	x1
Wi-Fi(S565W)	802.11b/g/n/ac
Bluetooth	4.0 and above
Ethernet	2 x RJ45
Power Supply	PoE 802.3af or 12VDC/1A
Alarm Input	x8
Door Bell Input	x1
Relay	x1, 30V 2A
RS485	✓
Wiegand Input	X
NFC	X
Reset Button	X
Alarm Zone	8

Introduction to Configuration Menu

- **Status:** This section gives you basic information such as product information, network information, account information, etc.
- **Account:** This section concerns the SIP account, SIP server, proxy server, transport protocol type, audio & video codec, DTMF, session timer, etc.
- **Network:** This section mainly deals with DHCP & Static IP settings, RTP port settings, device deployment, etc.
- **Device:** This section includes time & language, call feature, screen display, multicast, audio intercom feature, monitor, relay, lift import & export, door log, and web relay.
- **Contacts:** This section allows the user to configure the local contact list stored in the device.
- **Upgrade:** This section covers firmware upgrade, device reset and reboot, configuration file auto-provisioning, and PCAP.
- **Security:** This section is for password modification, account status & session time-out configuration, as well as service location switching.
- **Settings:** This section includes the RTSP and power output.
- **Arming:** This section covers the configuration including arming zone setting, arming mode, disarm code, and alarm action.

Breathing Light Status

The indicator light is on the right side of the device, showing the different status of the device.

See the indicator light status below:

Status	Color	Light	Description
System status	Blue	ON	The system is working
Power up	White	ON	The system is powered
System booting	Blue	ON	The device is booting
Network	Red	Flashing	Failed to obtain the IP address
Incoming Call	Blue	Flashing	Receiving an incoming call
End a call	Blue	ON	End a call
Screen/System	N/A	OFF	The screen is turned off The device is turned off
Alarm	Red	Flashing	An alarm is triggered
Doorbell	Blue	Flashing	Doorbell is ringing
Upgrade/Reset	Red	Flashing	Upgrading the device Reset the device to the factory setting

Note

The alarm status light has the highest priority.

Access the Device

Akuvox indoor monitor system settings can be either accessed on the device or its web interface.

Device Start-up Network Selection

After the device boots up initially, you are required to select the network connection for the device. You can either select Ethernet or wireless network connection according to your need.

Note

Please refer to [Network Setting & Other Connection](#) for the configuration of the Ethernet and wireless network connection.

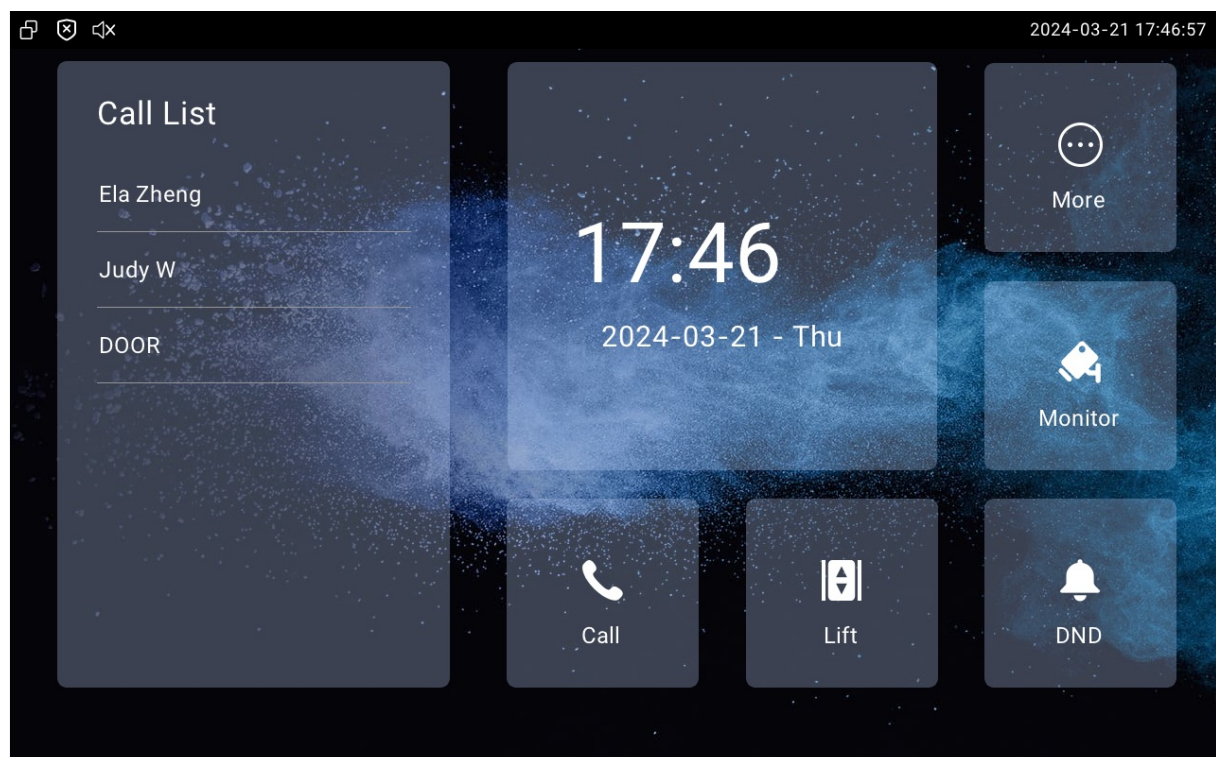

Device Home Screen Type Selection

Akuvox indoor monitor supports two different home screen display modes: **Call list simple** and **classic**.

Classic:

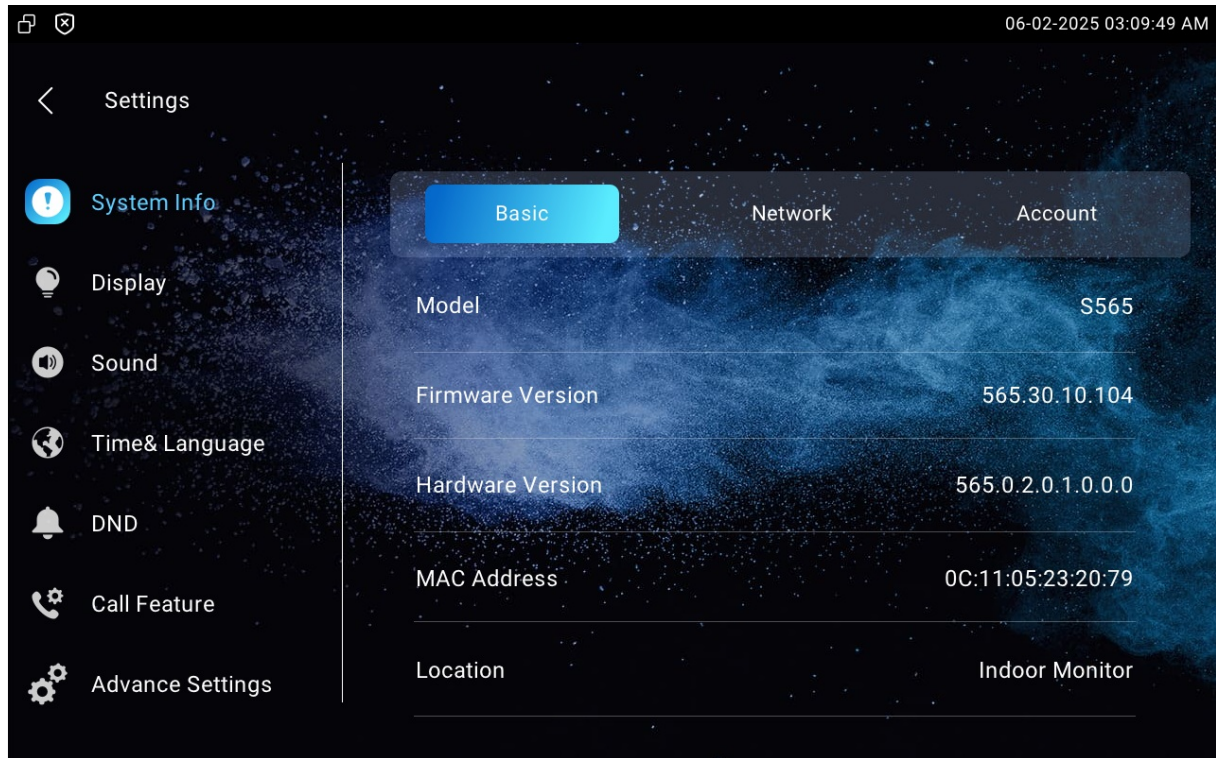

Call List Simple:

Access the Device Settings

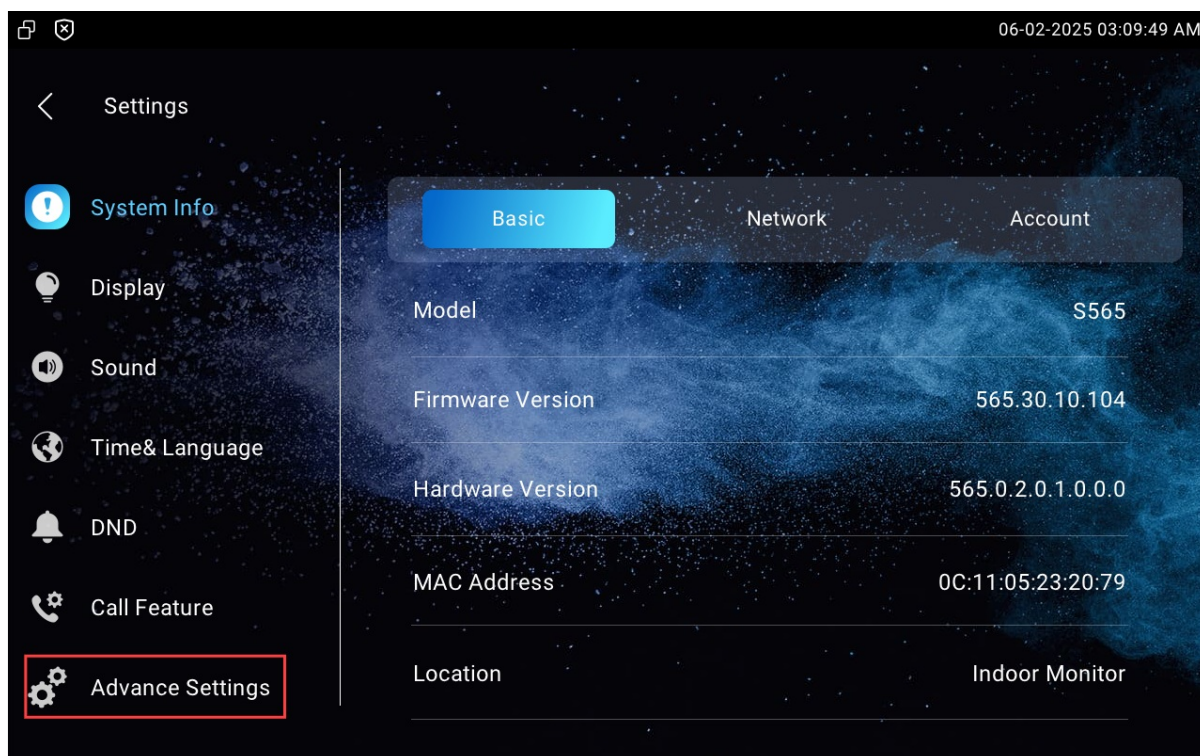

Access Device Basic Settings

You can access the device's basic and advanced settings to configure different types of functions as needed. To access the device's basic settings, tap **More > Settings**.

Access Device Advance Settings

To access the advanced settings, press  and then tap the **Advance Settings**. Press the default password **123456** to enter the advanced settings.

Access the Device's Web Settings

You can enter the device IP address in a browser and log into the device web interface where you can configure and adjust parameters.

To check the IP address, you can go to the device **Settings > System Info > Network** screen. You can also search the device by IP scanner, which can search all the devices on the same LAN.

IP Scanner

Online Device : 4

Model: All

Index	IP Address	MAC Address	Model	Room Number	Firmware Version
1	192.168.35.57	0C11052488F0	X915S	1.1.1.1.1	2915.30.10.224
2	192.168.35.90	0C11051696EB	E12SV823	1.1.1.1.1	312.30.10.212
3	192.168.35.163	0C11051F2BF0	A092	1.1.1.1.1	92.30.1.212
4	192.168.35.193	0C110523F497	S567	1.1.1.1.1	567.30.12.902

Note

- Download IP scanner:
<https://knowledge.akuvox.com/docs/akuvox-ip-scanner?highlight=IP>
- See detailed guide:
<https://knowledge.akuvox.com/v1/docs/en/how-to-obtain-ip-address-via-ip-scanner?highlight=IP%20Scanner>
- Google Chrome browser is strongly recommended.
- The initial username and password are **admin** and please be case-sensitive to the user names and passwords entered.

Language and Time

Language

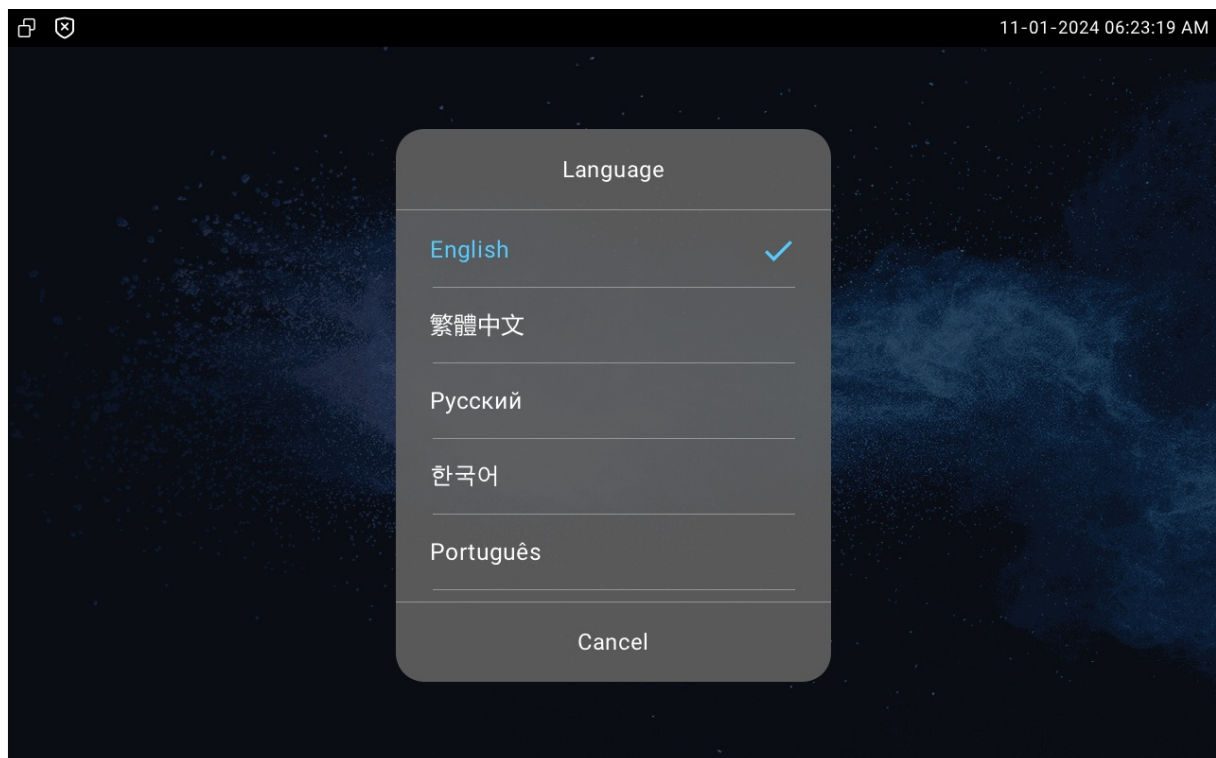

Set up the language during initial device setup or later through the device or web interface according to your preference.

Language Setting on the Device

To select the desired language, go to **Settings > Time & Language** screen.

The following languages are supported:

- English, Traditional Chinese, Russian, Korean, Portuguese, Spanish, Italian, Dutch, French, German, Hebrew, Turkish, Polish, Japanese, Slovak, Simplified Chinese, Norwegian, Vietnamese, Lithuanian, Czech, Ukrainian, and Arabic.

Language Setting on the Web Interface

You can switch the web language in the upper right corner.

The following languages are supported:

English, Simplified Chinese, Traditional Chinese, Russian, Portuguese, Spanish, Dutch, French, German, Polish, Japanese, and Korean.

Time Setting

Time settings, including time zone, date and time format, and more, can be configured either on the device or the web interface.

Time Setting on the Web Interface

The time settings on the web interface allow you to configure the NTP server address for automatic time and date synchronization. Once a time zone is selected, the device will notify the NTP server of the chosen time zone, enabling it to synchronize the time zone settings on your device.

To set it up, navigate to the web **Device > Time** interface.

Time Setting

Automatic Date&Time

Time Format

12-Hour-Format

Date Format

DD-MM-YYYY

Date

11-01-2024

Time

6:41 am

Time Zone

London

NTP

Preferred Server

0.pool.ntp.org

Alternate Server

1.pool.ntp.org

Update Interval

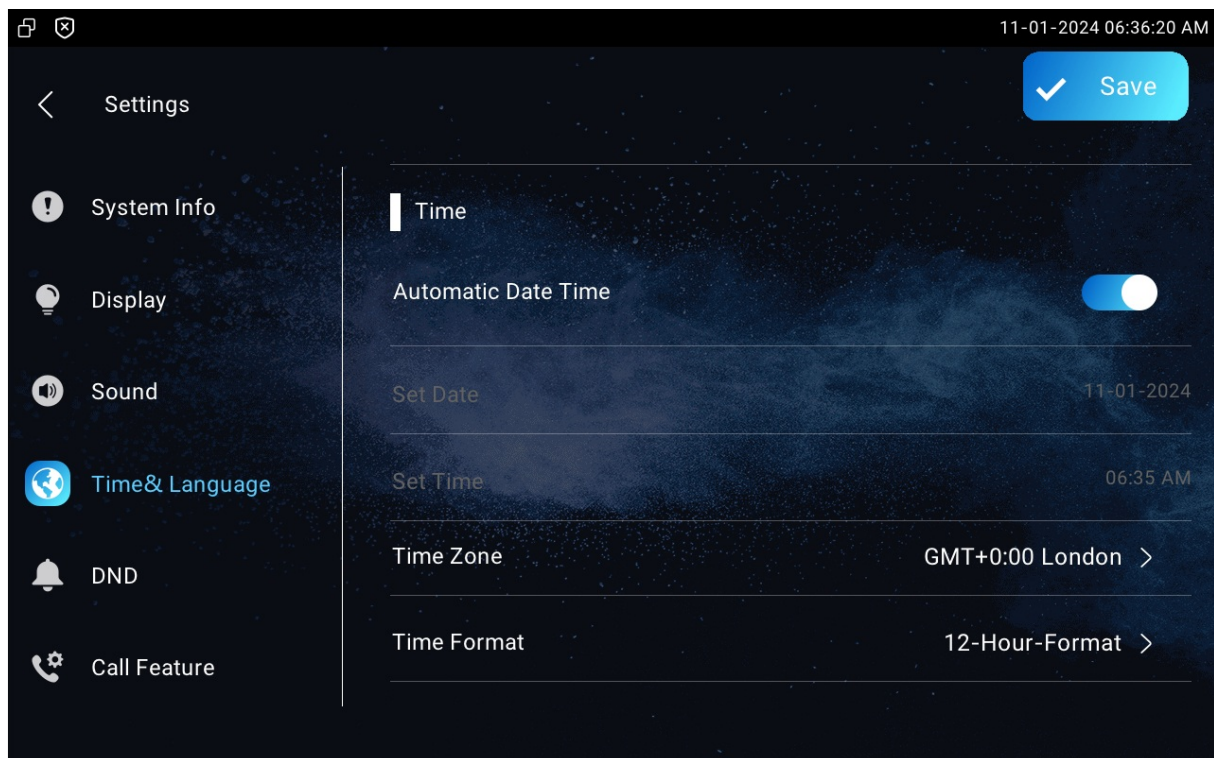

3600

(>=3600Sec)

- **Automatic Date&Time:** The automatic date is switched on by default, which allows the date & time to be automatically set up and synchronized with the default time zone and the Network Time Protocol(NTP) server. You can also set it up manually by switching off the automatic date and entering the time and date.
- **Time Format:** Select a 12-hour or 24-hour time format.
- **Date Format:** Select the date format from the available options.
- **Time Zone:** Select the specific time zone depending on where the device is used. The default time zone is GMT+0:00.
- **Preferred Server:** Enter the NTP server address.
- **Alternate Server:** Enter the backup server address. When the main NTP server fails, it will change to the backup server automatically.
- **Update Interval:** The time between sending the update request to the NTP server.

Time Setting on the Device

Set up time on the device **Settings > Time & Language** screen.

- **Automatic Date Time:** The automatic date is switched on by default, which allows the date & time to be automatically set up and synchronized with the default time zone and the Network Time Protocol(NTP) server. You can also set it up manually by switching off the automatic date and entering the time and date.
- **Time Zone:** Select the specific time zone depending on where the device is used. The default time zone is GMT+0:00.
- **Time Format:** Select a 12-hour or 24-hour time format.
- **Date Format:** Select the date format from the available options.
- **NTP Server 1/2:** Enter the NTP server address. NTP server 2 is the backup.

Daylight Saving Time

Daylight Saving Time is the practice of advancing clocks (typically by one hour) during warmer months so that darkness falls at a later clock time. You can modify the time parameters to achieve longer evenings or daytime, especially in summer.

Set it up on the **Device > Time** interface.

Daylight Saving Time

Daylight Saving Time Enabled	Auto	
Offset	60	(-300~300Minutes)
Update Interval	By Date	
Start Time	1	Mon (1~12)
	1	Day (1~31)
	0	Hour (0~23)
End Time	12	Mon (1~12)
	31	Day (1~31)
	23	Hour (0~23)

- **Daylight Saving Time Enabled:** Enable or disable the feature. **Auto** means that the device adjusts the daylight saving time automatically.
- **Offset:** 60 minutes as default, setting the clocks an hour ahead of the standard time.

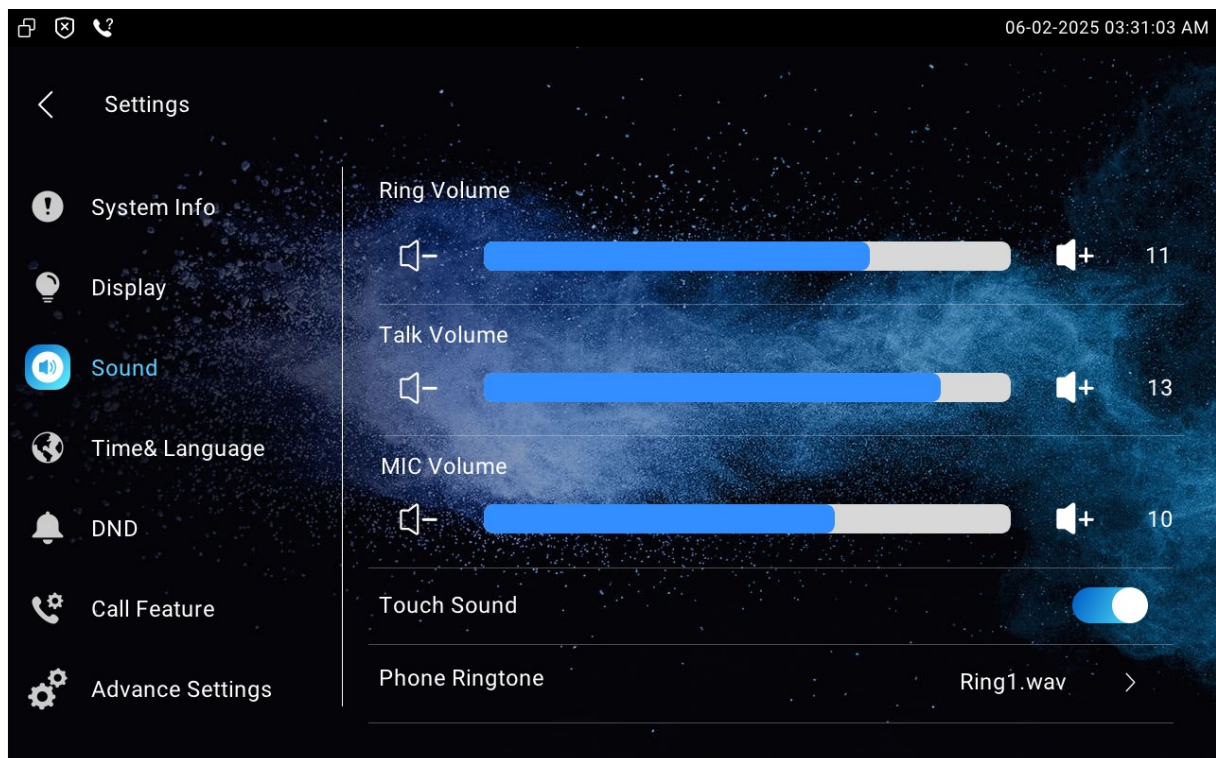

- **Update Interval:** There are two options: **By Date** and **By Week**. By Date sets the date schedule for daylight saving time. By Week sets the schedule for daylight saving time according to the week and month.

Sound and Volume

Akuvox indoor monitor provides you with various types of ringtones and volume configurations. You can configure them on the device directly or on the web interface.

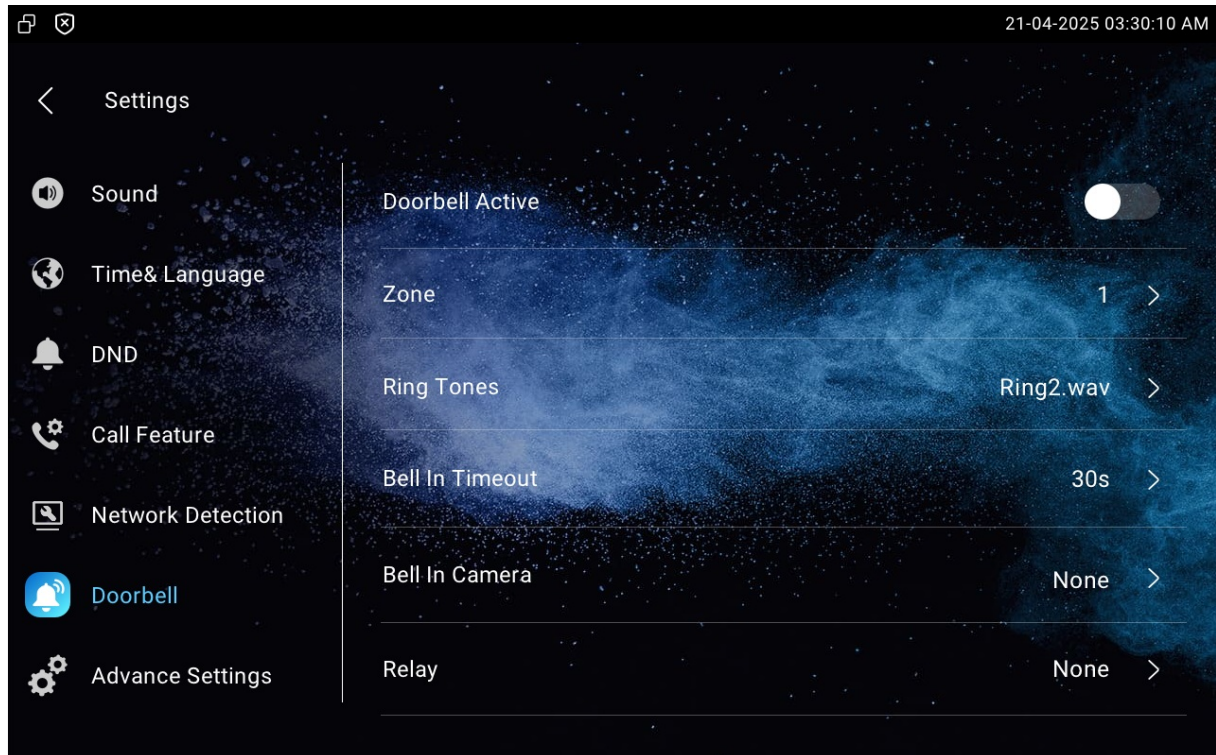

Configure Volume on the Device

Set up the volumes on the device **Settings > Sound** screen.

- **Ring Volume:** The incoming call ringtone volume.
- **Talk Volume:** The speaker volume during the call.
- **Mic Volume:** The mic volume.
- **Touch Sound:** The icon tapping sound.
- **Phone Ringtone:** The ringtone for incoming calls.
- **Notification Sound:** The ringtone for the incoming messages.
- **Door Unit Ring Tones:** The tone sounds when the indoor monitor receives calls from a door phone.

You can configure the doorbell sound on the **Settings > Doorbell** screen.

- **Zone:** Set which zone(IO port) is used for doorbell connection.
- **Ring Tones:** Select the doorbell sound.
- **Bell In Timeout:** Set the doorbell duration(from 10 seconds to 5 minutes).
- **Bell In Camera:** Select the camera to be triggered along with the doorbell.
- **Relay:** Select the local relay to be triggered along with the doorbell.

Configure Volume on the Web Interface

You can configure volumes on the **Device > Audio** interface.

Volume Control		
Mic Volume	<input type="text" value="10"/>	(1~15)
Ring Volume	<input type="text" value="11"/>	(0~15)
Talk Volume	<input type="text" value="13"/>	(1~15)
Touch Sound	<input checked="" type="checkbox"/>	

- **Mic Volume:** The mic volume.
- **Ring Volume:** The incoming call ringtone volume.

- **Talk Volume:** The speaker volume during the call.
- **Touch Sound:** The icon tapping sound.

Upload Ringtones

You can customize ringtones on the **Device > Audio** interface. Click **Import** to upload the ringtone and **Delete** to delete the existing one.

All Ringtones

Ringtones Upload	<input type="button" value="Import"/>	
Ringtones Sound	<input type="text" value="Ring1.wav"/>	<input type="button" value="Delete"/>
Door Unit Ring Tones	<input type="text" value="Ring1.wav"/>	

- **Ringtones Sound:** The ringtone for incoming calls.
- **Door Unit Ring Tones:** The ringtone for the door opening.

Note

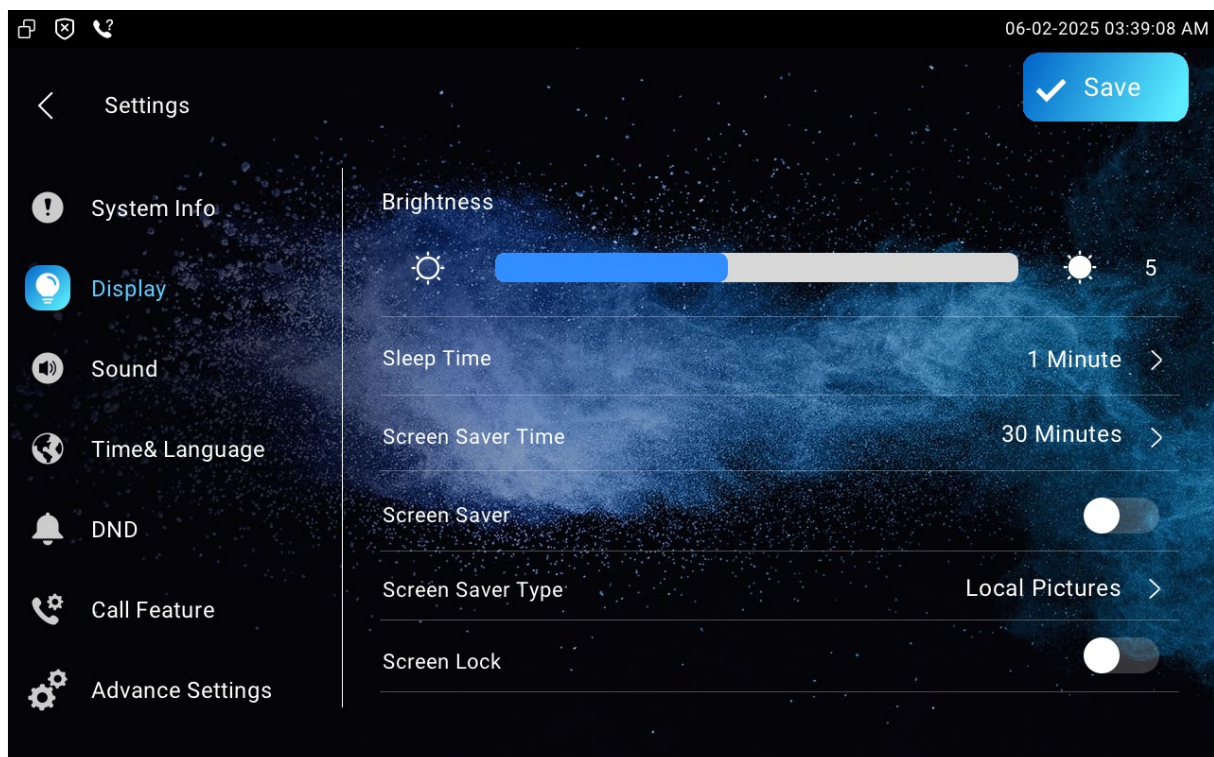

File Format: .wav; Max Size: 250K.

Screen Display

Screen Display Setting on the Device

You can configure a variety of features of the screen display in terms of brightness, screen saver and font size, etc.

Set up the screen display on the **Settings > Display** screen.

- **Brightness:** Move the blue bar to adjust the screen brightness.
- **Sleep Time:** Set the sleep timing based on the screen saver (15 seconds to 30 minutes).
 - If the screen saver is enabled, the sleep time here is the screen saver start time. For example, if you set it as 1 minute, the screen saver will start automatically when the device has no operation for 1 minute.
 - If the screen saver is disabled, the sleep time here is the screen turn-off time. For example, if you set it as 1 minute, the screen will be turned off automatically when the device has no operation for 1 minute.
- **Screen Saver Time:** The time for displaying the screensaver.

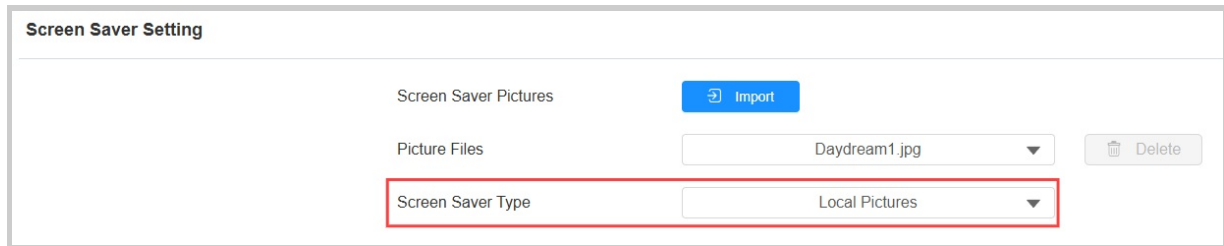

- **Screen Saver:** Determine whether to display the screensaver when the device goes into sleep mode.
- **Screen Saver Type:**
 - **SDMC Pictures:** Display pictures uploaded to the SDMC.
 - **Local Pictures:** Display pictures uploaded to the indoor monitor as the screen saver.
 - **SDMC + Local Pictures:** Display pictures uploaded to the SDMC or the indoor monitor as the screen saver.
- **Screen Lock:** Lock the screen after the screen is turned off(turn dark). You are required to enter the code to unlock the screen. The initial password is empty. Tap ✓ to unlock the screen.
- **Screen Clean:** Allow users to wipe the screen clean without triggering unwanted changes in the settings.
- **Wallpaper:** It is for local wallpaper selection.

You can also turn off the screen manually.

Screen Display Setting on the Web Interface

You can configure the screen display on the **Device > Display Setting > Screen Saver Setting** interface.

Screen Saver Setting

Screen Saver Pictures Import

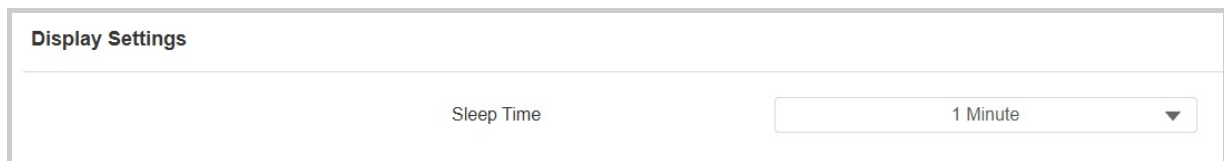

Picture Files Daydream1.jpg Delete

Screen Saver Type Local Pictures

- **Screen Saver Type:**

- **SDMC Pictures:** Display pictures uploaded to the SDMC.
- **Local Pictures:** Display pictures uploaded to the indoor monitor as the screen saver.
- **SDMC + Local Pictures:** Display pictures uploaded to the SDMC or the indoor monitor as the screen saver.
- **Clock:** Display the clock as the screen saver.

You can set the screen sleep time on the **Device > Display Setting > Display Settings** interface.

Display Settings

Sleep Time 1 Minute

- **Sleep Time:** If the screen saver is enabled, the sleep time is the screen saver's start time. For example, if you set it as 1 minute, the screen saver will start automatically when the device has no operation for 1 minute. If the screen saver is disabled, the screen will be turned off automatically when the device has no operation for 1 minute.

Upload Screen Saver

You can upload screen-saver images individually or in batches to the device via the web interface, enhancing visual experience or serving publicity purposes.

Set it up on the web **Device > Display Setting > Screen Saver Setting** interface.

You can click **Delete** to delete the existing files.

Screen Saver Setting

Screen Saver Pictures Import

Picture Files Daydream1.jpg Delete

Screen Saver Type Local Pictures

- **Screen Saver Pictures:** Max size: 256K; Format:1280×800 jpg; File name can only contain digits, letters, and “_”.

Note

The previous pictures with a specific ID order will be overwritten when the repetitive designation of pictures to the same ID order occurs.

Upload Wallpaper

You can customize your screen background picture on the device web to achieve the visual effect and experience for users.

Navigate to **Device > Display Setting > Wallpaper** interface.

Wallpaper

Wallpaper Import

Wallpaper Files Daydream1.jpg Delete

- **Wallpaper:** Max size: 256K; Format:1024x600 jpg; File name can only contain digits, letters, and “_”.

Upload Device Booting Image

You can upload the booting image to be displayed during the device’s booting process.

To set it up, navigate to the web **Device > Display Setting> Boot Logo** interface.

Boot Logo

Boot Logo Import Reset

Note

Max size:100K; Format:1280*800 jpg; File name can only contain digits, letters and_.

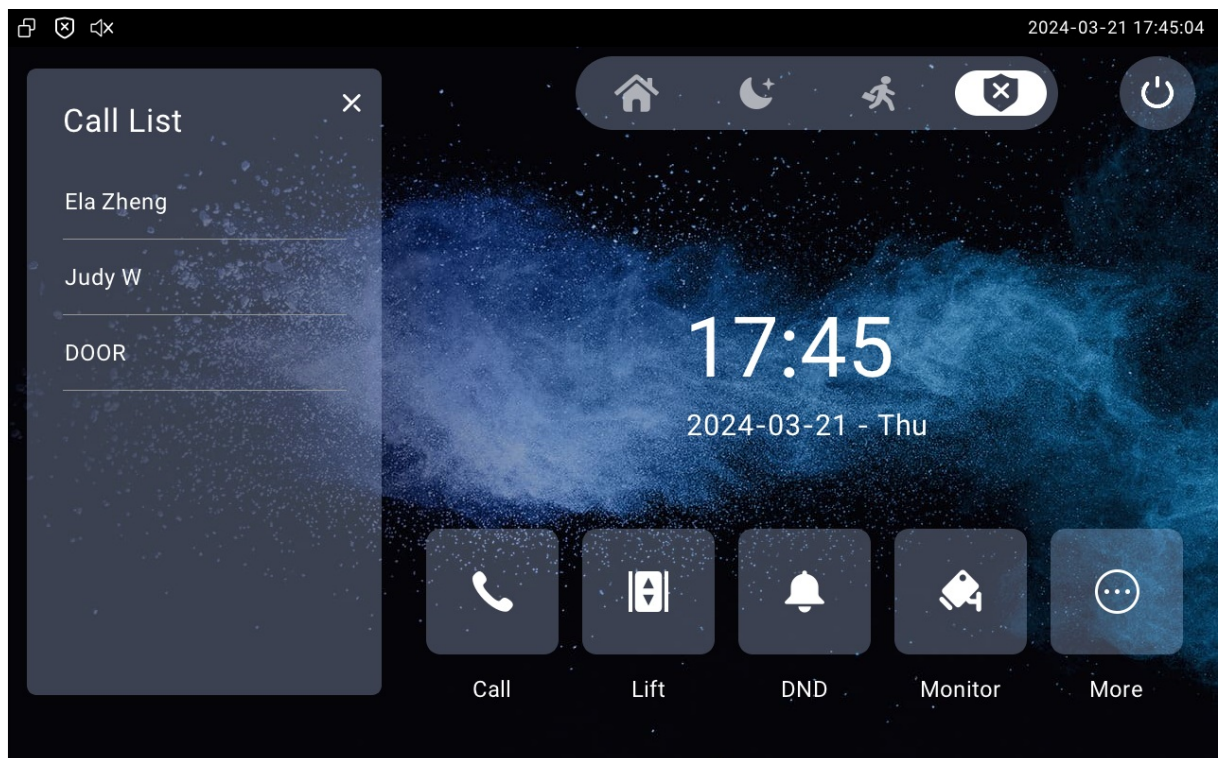

Home Screen Display

You can select the **Default** or **Call List** home screen display.

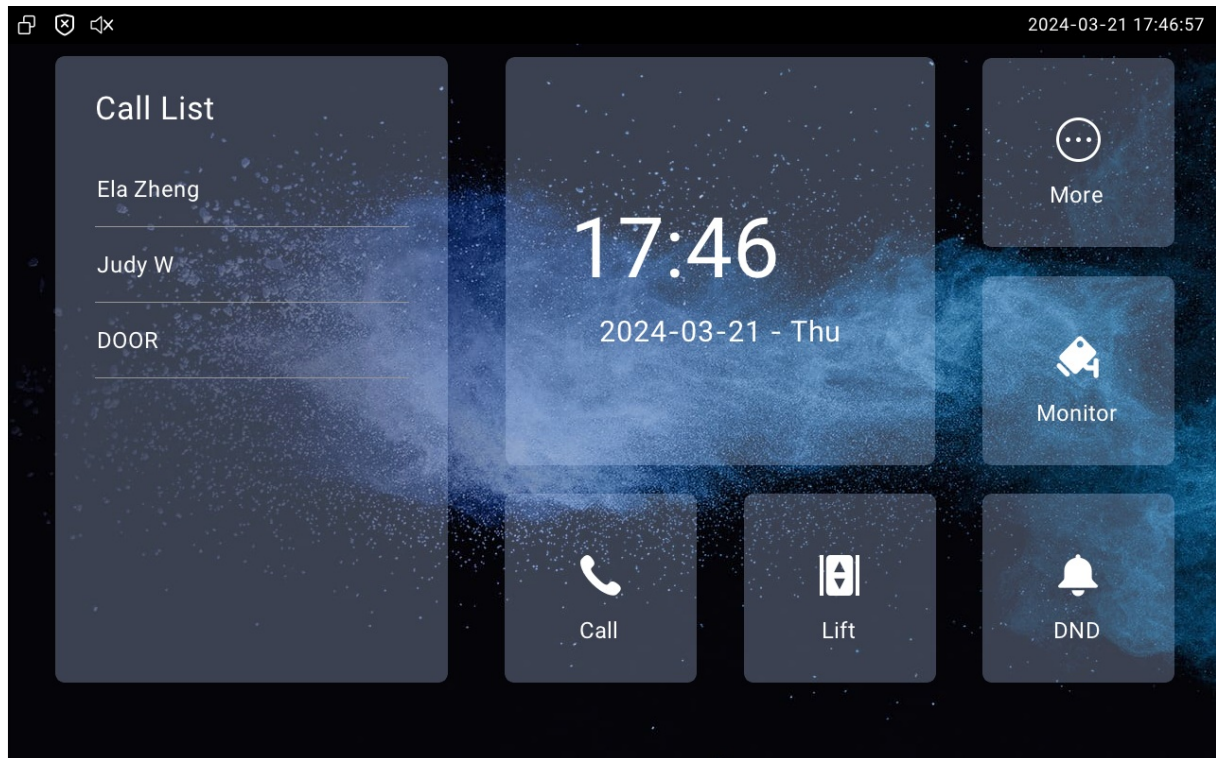

To set it up, go to the web **Device > Display Setting > Theme** interface.

Theme	
Theme	Classic

Classic:

Call list simple:

Home Screen Tab Display

Akuvox indoor monitor allows you to customize icon display on the **Home** screen and **More** screen for the convenience of users' operation.

To set it up, navigate to **Device > Display Setting** interface.

Home Page Display Example

Area	Type	Value	Label	Icon(max size:100*100)
Area1	Call		Call	Not selected any files Select File Delete
Area2	Message		Message	Not selected any files Select File Delete
Area3	DND		DND	
Area4	Monitor		Monitor	Not selected any files Select File Delete

- **Type:** Select the functional icon to be displayed on the home screen.
 - **All Calls/All Calls 1-3:** Tap to initiate [multicast calls](#). When **All Calls** is selected and more than one multicast group is configured, users can choose the desired group after tapping All Calls. All Calls 1-3 corresponds to the multicast groups 1 to 3.
- **Label:** Name the icon. The DND icon cannot be renamed.

- **Type:** Click to upload the icon picture. The maximum icon size is 100*100. The picture format can be JPG, JPEG, or PNG.

You can click **Example** to see the icon layout.

Configure the icons displayed on **More Page Display** on the same interface.

More Page Display Example

Area	Type	Value	Label	Icon(max size:100*100)
Area1	Contacts		Contacts	Not selected any files Select File Delete
Area2	Settings		Settings	Not selected any files Select File Delete
Area3	Arming		Arming	Not selected any files Select File Delete
Area4	N/A			Not selected any files Select File Delete
Area5	N/A			Not selected any files Select File Delete
Area6	N/A			Not selected any files Select File Delete

Unlock Tab Configuration

You can customize the unlock tab and select the relay type on the talking, monitor, and call preview screen for the door opening.

To set up the unlock tab on the talking screen, go to **Device > Relay > SoftKey In Talking Page** interface.

Softkey In Talking Page

Key	Status	Display Name	Type
Key1	Enabled	Unlock1	Auto
Key2	Disabled	Unlock2	Auto
Key3	Disabled	Unlock3	Auto

- **Status:** With it enabled, the unlock tab will be displayed on the talking screen.
- **Display Name:** Name the unlock tab.
- **Type:** Select the relay trigger type according to the actual setup.

Scroll down to set up the unlock tab on the **Call Preview** screen.

Softkey In Call-Preview Page

Key	Status	Display Name	Type
Key1	Enabled ▼	Unlock1	Auto ▼
Key2	Disabled ▼	Unlock2	Auto ▼
Key3	Disabled ▼	Unlock3	Auto ▼

- **Status:** With it enabled, the unlock tab will be displayed on the call-preview screen.
- **Display Name:** Name the unlock tab.
- **Type:** Select the relay trigger type according to the actual setup.

Scroll down to set up unlock tabs on the home screen and more screens.

Softkey In Homepage or More Page

Key	Status	Display Name	Type
Key	Enabled ▼	Unlock	Remote Relay HTTP1 ▼

- **Status:** It is enabled by default.
- **Display Name:** Name the unlock tab.
- **Type:** Select the relay trigger type according to the actual setup.

Scroll down to set up unlock tabs on the **Monitor** screen.

Softkey In Monitor Page

Key	Status	Display Name	Type
Key1	Enabled ▼	Unlock1	Auto ▼
Key2	Disabled ▼	Unlock2	Auto ▼
Key3	Disabled ▼	Unlock3	Auto ▼

- **Status:** With it enabled, the unlock tab will be displayed on the monitoring screen.
- **Display Name:** Name the unlock tab.
- **Type:** Select the relay trigger type according to the actual setup.

Note

Please refer to the [Access Control Configuration](#) chapter for different unlock types setup.

Network Setting & Other Connection

Device Network Configuration

To ensure normal functioning, make sure that the device has its IP address set correctly or obtained automatically from the DHCP server.

On the Web Interface

Check the network on the web **Status > Network information** interface.

Network Information	
LAN Port Type	DHCP Auto
LAN Link Status	Connected
LAN IP Address	192.168.35.103
LAN Subnet Mask	255.255.255.0
LAN Gateway	192.168.35.1
Preferred DNS	218.85.157.99
Alternate DNS	218.85.152.99

Check and configure the network connection on the web **Network > Basic > LAN Port** interface.

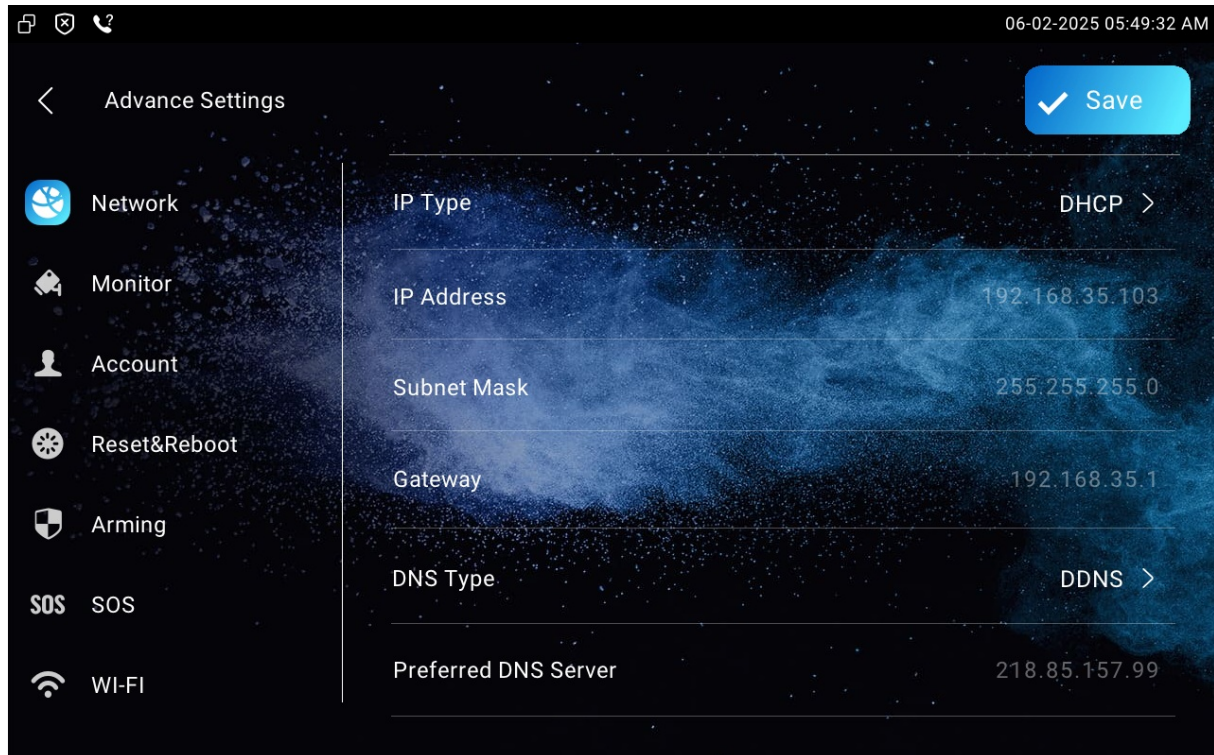

LAN Port	
IP Type	<input type="radio"/> DHCP <input checked="" type="radio"/> Static IP
IP Address	<input type="text" value="192.168.35.103"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
Default Gateway	<input type="text" value="192.168.35.1"/>
DNS Type	<input type="radio"/> DDNS <input checked="" type="radio"/> Static DNS
Preferred DNS Server	<input type="text" value="218.85.157.99"/>
Alternate DNS Server	<input type="text" value="218.85.152.99"/>

- IP Type:

- **DHCP** mode will enable the indoor monitor to be assigned by the DHCP server with IP address, subnet mask, default gateway, and DNS address automatically.
- **Static IP** allows you to enter the IP address, subnet mask, default gateway, and DNS address manually according to the actual network environment.
- **IP Address:** The IP address when the static IP mode is selected.
- **Subnet Mask:** The subnet mask should be set up according to the actual network environment.
- **Default Gateway:** The gateway should be set up according to the IP address.
- **DNS Type:** Domain Name Server(DNS) type.
 - **DDNS:** Dynamic DNS. It is obtained automatically through the DHCP server.
 - **Static DNS:** When selected, you need to enter the DNS manually.
- **Preferred/Alternate DNS Server:** The preferred and alternate Domain Name Server(DNS). The preferred DNS server is the primary DNS address while the alternate DNS server is the secondary one. The device will connect to the alternate server when the primary server is unavailable.

On the Device

Check and configure the network connection on the device **Settings > Advance Settings > Network** screen.

- **IP Type:** DHCP mode is the default network connection. The device will be assigned by the DHCP server with an IP address, subnet mask, default gateway, and DNS server address automatically. In static IP mode, the IP address, subnet mask, default gateway, and DNS server address have to be manually configured according to the actual network environment.
- **IP Address:** The IP address when the static IP mode is selected.
- **Subnet Mask:** The subnet mask should be set up according to the actual network environment.
- **Gateway:** The gateway should be set up according to the IP address.
- **DNS Type:** Domain Name Server(DNS) type.
 - **DDNS:** Dynamic DNS. It is obtained automatically through the DHCP server.
 - **Static DNS:** When selected, you need to enter the DNS manually.
- **Preferred & Alternate DNS Server:** The preferred and alternate Domain Name Server(DNS). The preferred DNS server is the primary DNS address while the alternate DNS server is the secondary one. The device will connect to the alternate server when the primary server is unavailable.

Note

- You can press System Info, and then press Network on the Settings screen to check device network status.
- The default code to enter advanced settings is 123456.

Device Deployment in Network

To facilitate device control and management, configure Akuvox intercom devices with details such as location, operation mode, address, and extension numbers.

Deploy the device in the network on the web **Network > Advanced > Connect Setting** interface.

The screenshot shows the 'Connect Setting' web interface. It contains the following fields and values:

- Connect Mode:** A dropdown menu set to 'None'.
- Discovery Mode:** A checkbox that is checked.
- Control4 Mode:** A checkbox that is unchecked.
- Device Node:** Five input boxes, each containing the number '1'.
- Device Extension:** An input box containing the number '1', with a '(1-9)' range indicator to its right.
- Device Location:** An input box containing the text 'Indoor Monitor'.

- **Connect Mode:** You can set up the connect mode according to the device connection with a specific server in the network such as **SDMC**, **Cloud**, or **None**. **None** is the default factory setting indicating the device is not in any server type.
- **Discovery Mode:** With discovery mode enabled, the device can be discovered by other devices in the network. Uncheck the box if you want to conceal the device.
- **Control4 Mode:** Enable this option for integration with the Control4 smart home.
- **Device Node:** Specify the device address by entering device location info from the left to the right: Community, Building, Unit, Floor, and Room in sequence.
- **Device Extension:** The device extension number for the device you installed.

- **Device Location:** The location in which the device is installed and used.

Device NAT Setting

Network Address Translation(NAT) lets devices on a private network use a single public IP address to access the internet or other public networks. NAT saves the limited public IP addresses and hides the internal IP addresses and ports from the outside world.

To register SIP accounts on third-party servers in a Wide Area Network(WAN), you need to enable the RPort feature on the intercom devices to establish a stable connection.

To set up NAT, go to **Account > Basic > NAT** interface.

NAT	
NAT	<input type="checkbox"/>
Stun Server Address	<input type="text"/>
Port	<input type="text" value="3478"/> (1024-65535)

- **Stun Server Address:** Set the SIP server address in the Wide Area Network(WAN).
- **Port:** Set the SIP server port.

Then go to **Account > Advanced > NAT** interface.

NAT	
RPort Enabled	<input type="checkbox"/>

- **RPort Enabled:** Enable the RPort when the SIP server is in WAN for the SIP account registration.

Device Web HTTP Setting

This function manages device website access. The device supports two remote access methods: HTTP and HTTPS (encryption).

Set it up on the **Network > Advanced > Web Server** interface.

Web Server		
HTTPS Port	<input type="text" value="443"/>	(443,1024~65535)

- **HTTPS Port:** Set the HTTPS port within the valid range.

VLAN Setting

A Virtual Local Area Network (VLAN) is a logical group of nodes from the same IP domain, regardless of their physical network segment. It separates the layer 2 broadcast domain via switches or routers, sending tagged packets only to ports with matching VLAN IDs. Utilizing VLANs enhances security by limiting ARP attacks to specific hosts and improves network performance by minimizing unnecessary broadcast frames, thereby conserving bandwidth for increased efficiency.

To set it up, navigate to the web **Network > Advanced > VLAN Setting** interface. You can also set it up on the device **More > Settings > Advance Settings > Network** screen.

VLAN Setting		
VLAN	<input type="checkbox"/>	
Priority	<input type="text" value="0"/>	▼
VLAN ID	<input type="text" value="1"/>	(1~4094)

- **Priority:** VLAN Priority lets you assign a priority to outbound packets containing the specified VLAN-ID (VID). Packets containing the specified VID are marked with the priority level configured for the VID classifier.
- **VLAN ID:** The same VLAN ID as the switch or router.

SNMP Setting

Simple Network Management Protocol(**SNMP**) is a protocol for managing IP network devices. It allows network administrators to monitor devices and receive alerts for attention-worthy conditions. SNMP provides variables describing system configuration, organized in hierarchies and described by Management Information Bases (MIBs).

Set it up on the **Network > Advanced** interface.

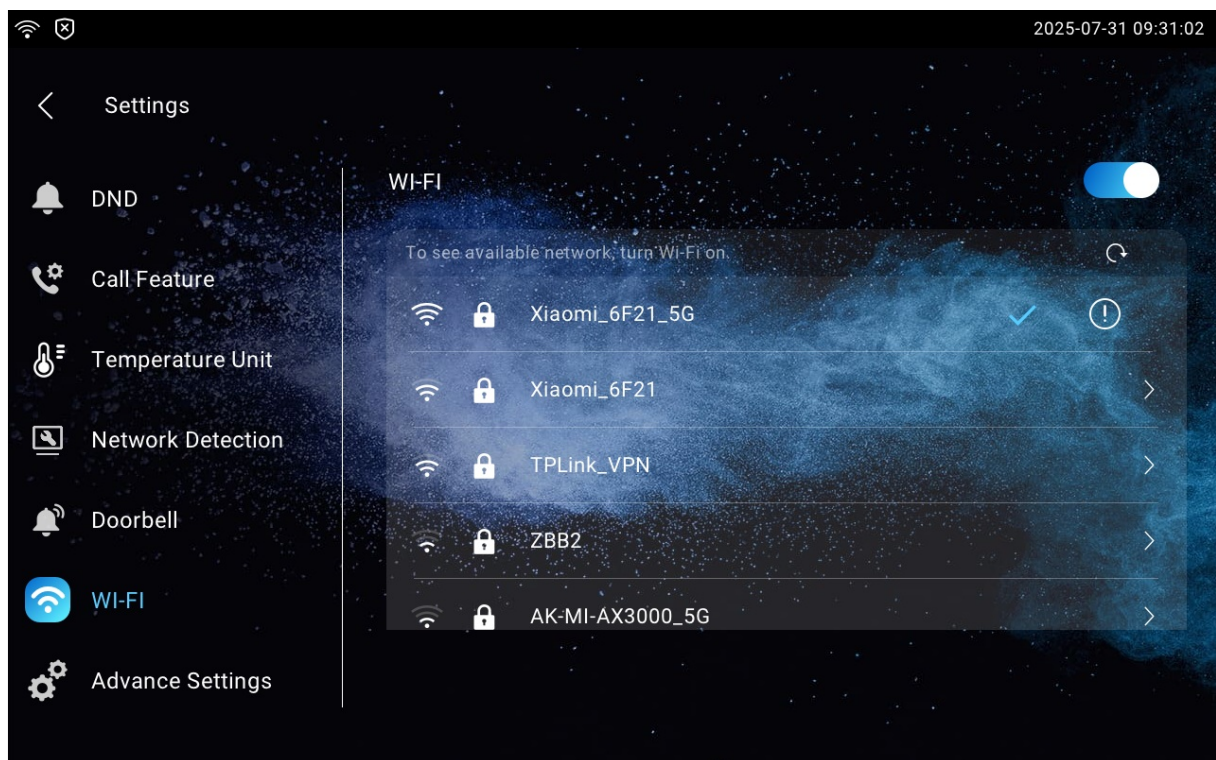

SNMP	
Enabled	<input type="checkbox"/>
Port	<input type="text"/> (1024~65535)
Trusted IP	<input type="text"/>

- **Port:** Set a specific port for the data transmission from 1024-65535.
- **Trusted IP:** Enter the third-party IP address.

Device Wi-Fi Setting

Set the Wi-Fi on the device **Settings > Wi-Fi** screen.

Tap the desired Wi-Fi and enter the password for connection.

Contacts Configuration

Contacts Configuration on the Web Interface

Add Local Contacts

You can add, edit, and search local contacts on the device's web interface. To add contacts, go to **Contacts > Local Contacts > Local Contacts List** interface, then click **+Add**.

Local Contacts List

Contacts List: All Contacts

Search:

Search Reset

+ Add Import Export

Add Contact

Name:

Number:

Group: Default

Dial Account: Auto

Ringtone: Auto Ringtone

Cancel Submit

- **Contacts List: All Contacts** displays all the contacts in the contact list. **Blocklist** displays the contacts in the blocklist.
- **Search:** Search a contact by its name or number.
- **Name:** The contact's name to distinguish it from others.
- **Number:** The SIP or IP number of the contact.
- **Group:** Calls from contacts in **Blocklist** will be rejected.
- **Dial Account:** The account to make the call, Account 1 or Account 2.

- **Ringtone:** The ringtone for the incoming call from the contact.

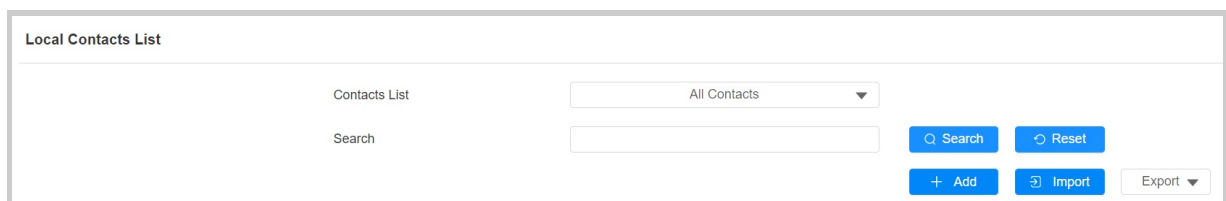

Note

If you want to remove the contact from the blocklist on the web interface, you can change the group to Default when editing the contact.

Import and Export Contacts

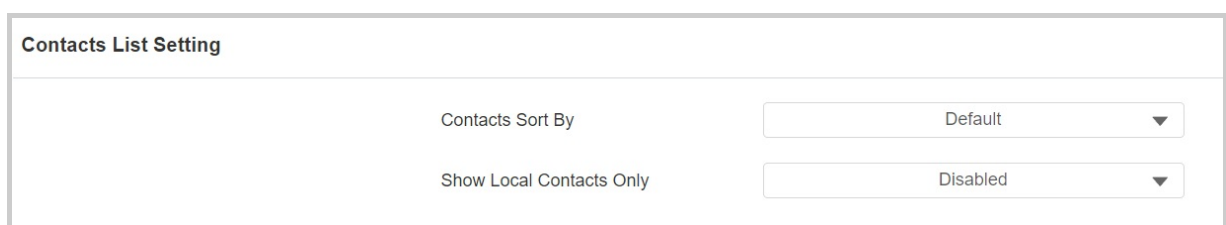

You can import and export contacts in batch. The file should be in .xml or .csv format.

To import or export contacts, go to **Contacts > Local Contacts > Local Contacts List** interface.

Contact List Display Configuration

Configure contact display on web **Contacts > Local Contacts > Contacts List Setting** interface.

- **Contacts Sort By:**
 - **Default:** The local contacts will be displayed before those from SmartPlus, SDMC, etc.
 - **ASCII Code:** The contacts will be displayed in the order based on the first letter of the contact names.
 - **Created Time:** The contacts will be displayed by their created time.

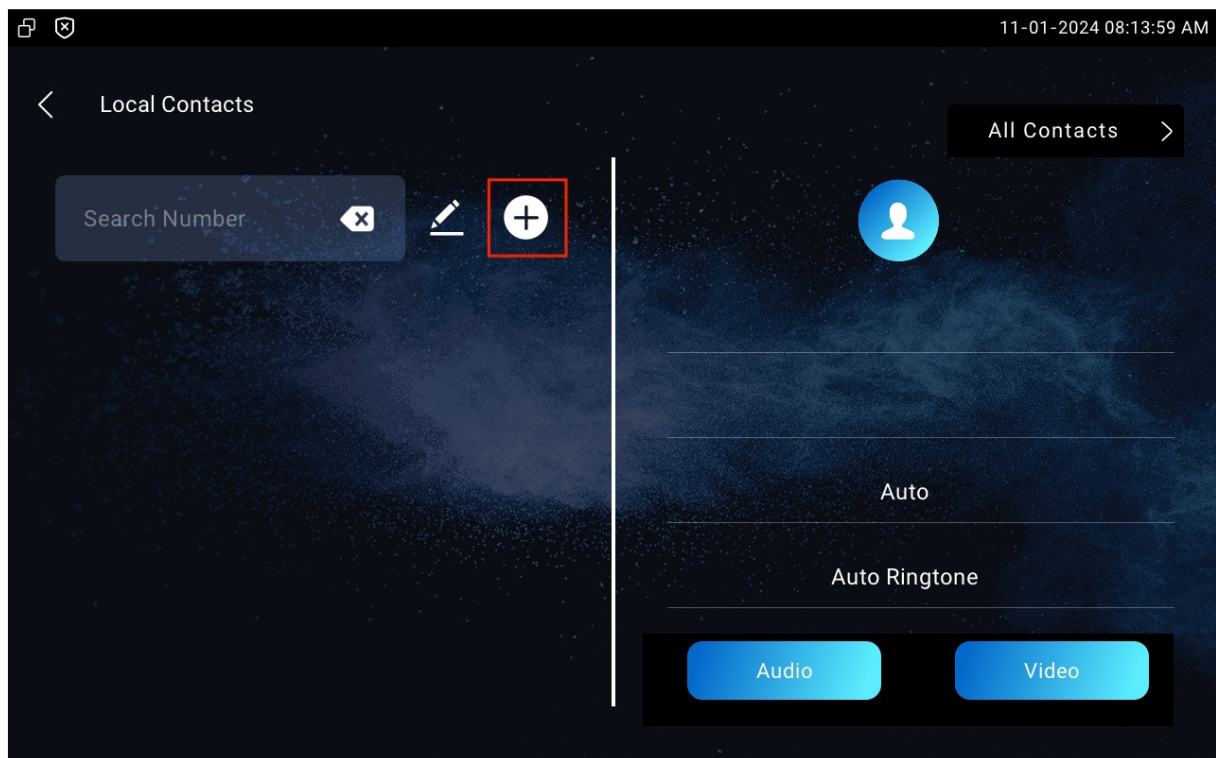

- **Show Local Contacts Only:** If enabled, only the local contacts will be displayed. If disabled, all the contacts from SmartPlus Cloud, SDMC, and so on will be displayed.

Contacts Configuration on the Device

You can add, edit, and delete contacts on the device **Contacts > Local Contacts** screen directly.

Add Local Contacts

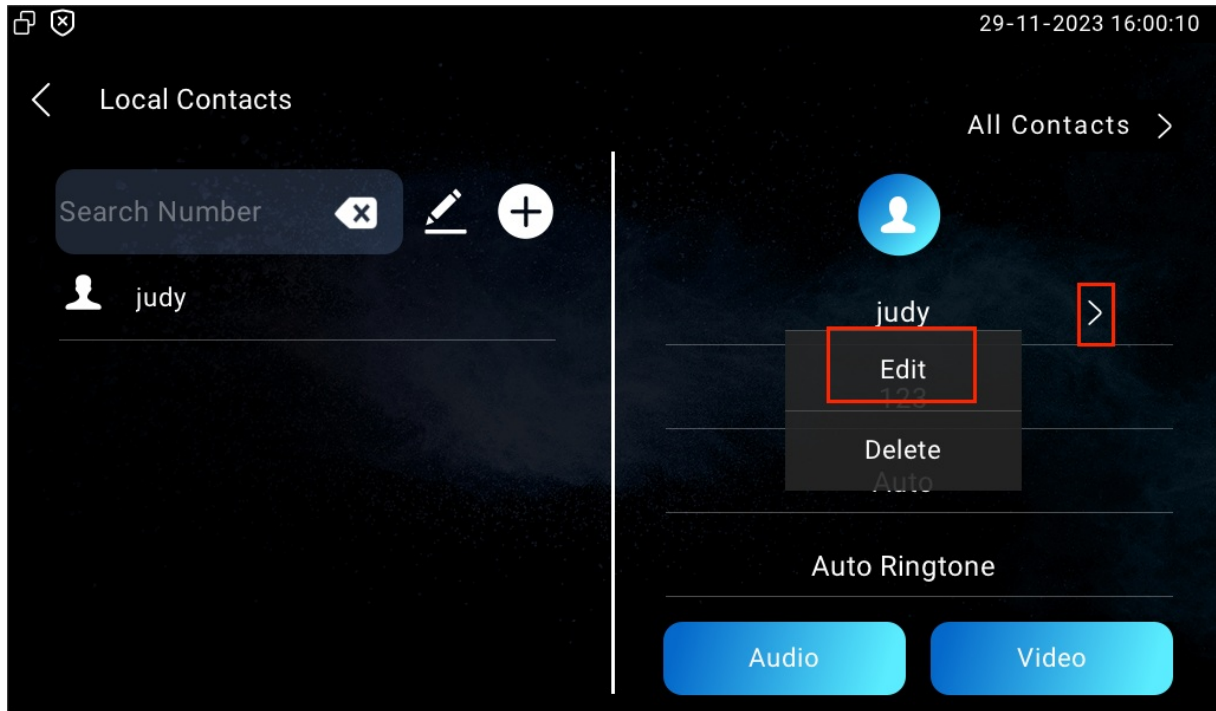

Tap the **Add** icon to add a contact.

- **Account:** The account to make the call, Account 1 or Account 2. **Auto** will adopt the registered account to make the call. If both accounts are registered, account 1 is the default option.
- **New Contact Name:** Name the contact to distinguish it from others.
- **Number:** The IP or SIP number.
- **Auto Ringtone:** The phone ringtone for incoming calls.

Edit Contacts

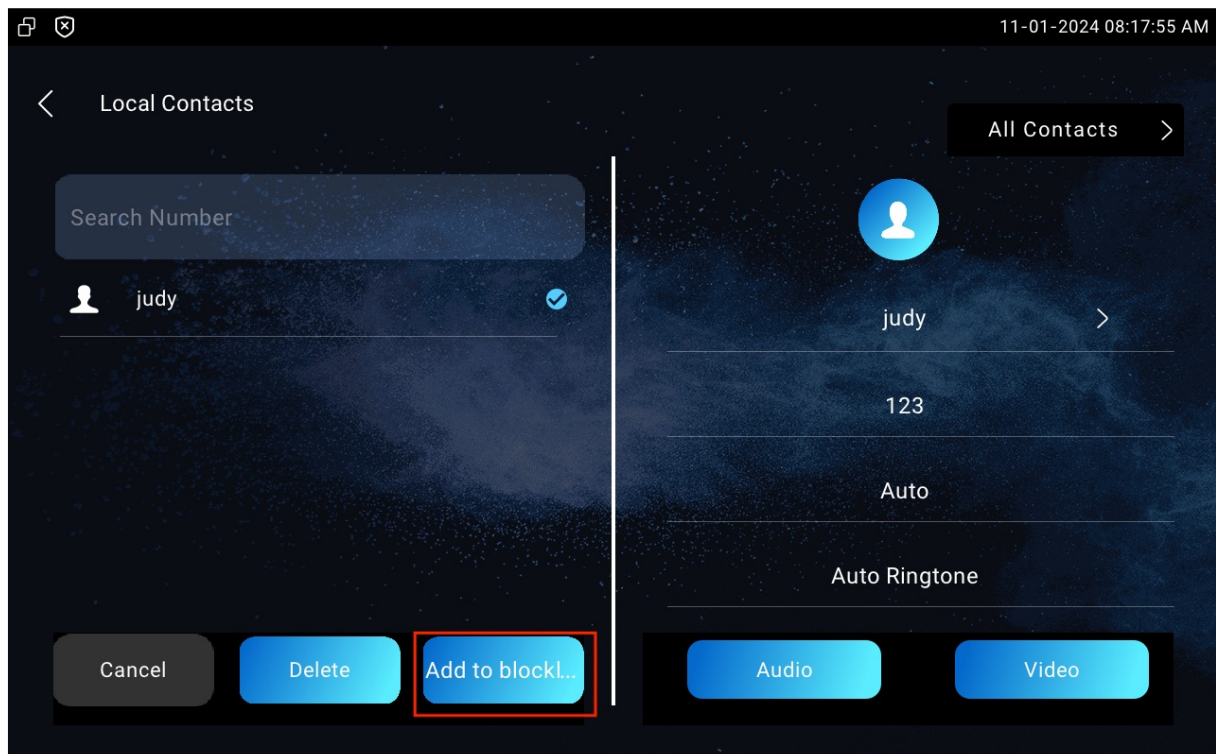

You can check and edit the existing contacts in the contact list. Choose one and click **Edit** to modify.

Blocklist Contacts

You can choose from the contact list the contact you want to add to the block list.

Incoming calls from the contacts in the blocklist will be rejected. Press the **Edit** icon, select the contact, and press **Add To Blocklist**.

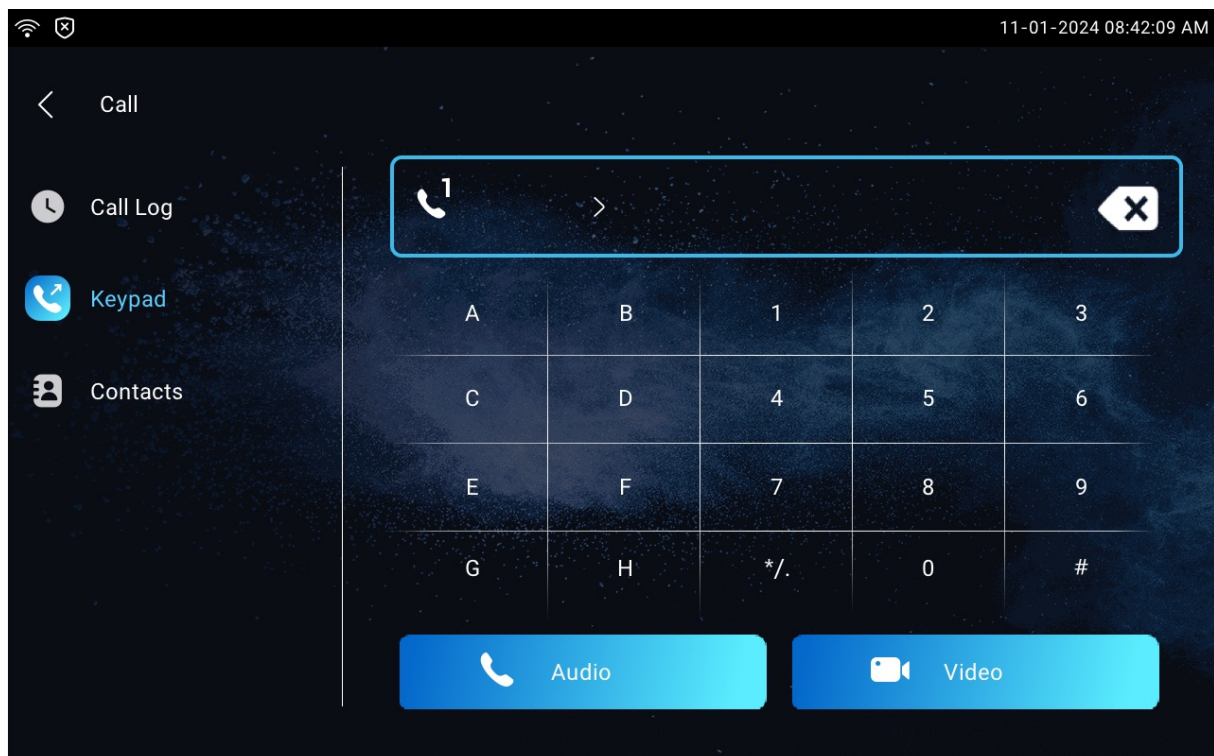

Intercom Call Configuration

IP Call & IP Call Configuration

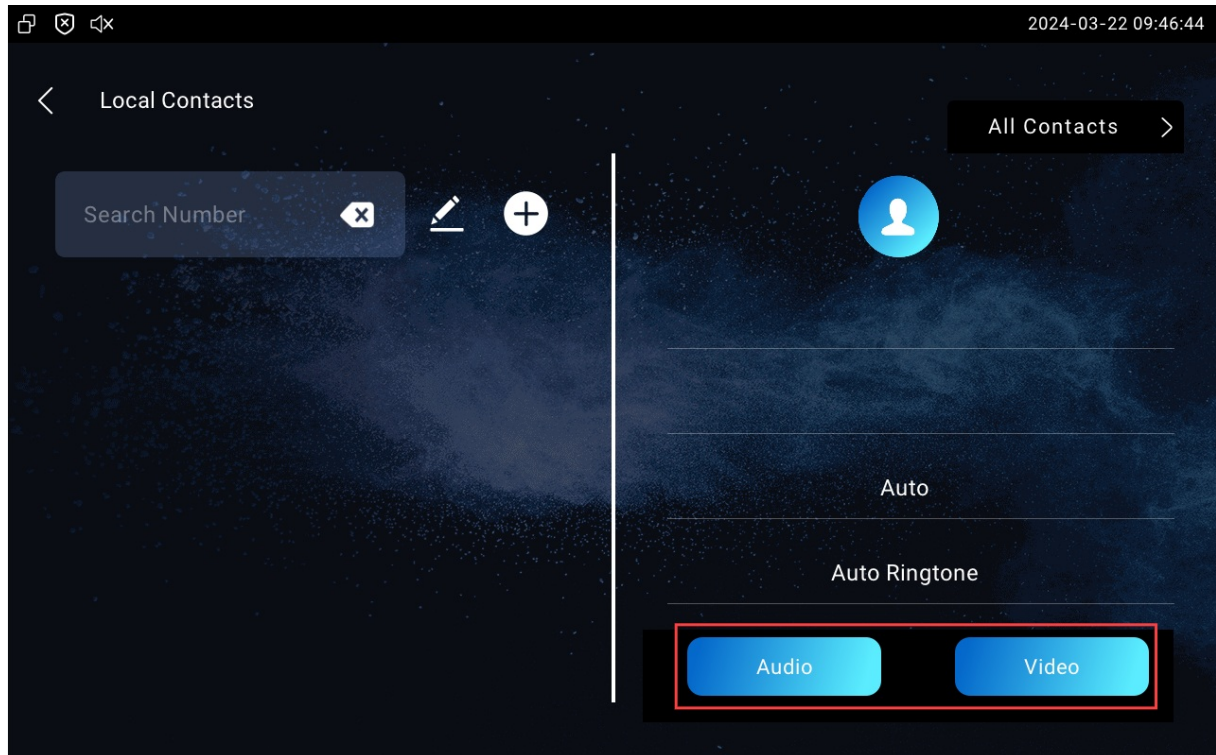

An IP call is a direct call between two intercom devices using their IP addresses, without a server or a PBX. IP calls work when the devices are on the same network.

Make IP Calls

Make a direct IP call on the device **Call > Keypad** screen. Enter the IP address on the soft keyboard, select the account to make the call, and press the **Audio** or **Video** tab to call out.

In addition, you can also make IP calls on the **Contacts > Local Contacts** screen.

IP Call Configuration

To configure the IP call feature and port, go to the web **Device > Call Feature > Others** interface.

Others	
Return Code When Refuse	486(Busy Here) ▼
Auto Answer Delay	0 (0~30Sec)
Answer Tone	Enabled ▼
Busy Tone	<input checked="" type="checkbox"/>
Indoor Auto Answer	<input type="checkbox"/>
Direct IP	<input checked="" type="checkbox"/>
Direct IP Port	5060 (1-65535)

- **Direct IP:** If you do not allow direct IP calls to be made on the device, you can untick the check box to terminate the function.
- **Direct IP Port:** Set the port for direct IP calls. The default is 5060, with a range from 1-65535. If you enter a value within this range other than 5060, ensure consistency with the corresponding device for data transmission.

SIP Call & SIP Call Configuration

Session Initiation Protocol(**SIP**) is a signaling transmission protocol used for initiating, maintaining, and terminating calls.

A SIP call uses SIP to send and receive data between SIP devices, and can use the internet or a local network to offer high-quality and secure communication. Initiating a SIP call requires a SIP account, a SIP address for each device, and configuring SIP settings on the devices.

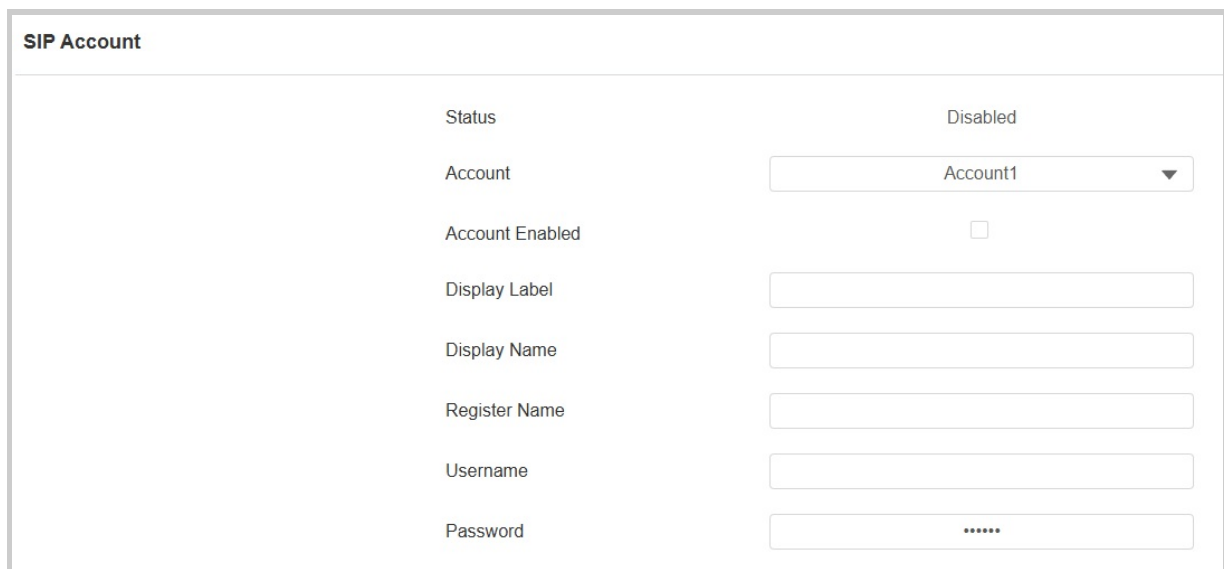

SIP Account Registration

Each device needs a SIP account to make and receive SIP calls.

Akuvox intercom devices support the configuration of two SIP accounts, which can be registered under two independent servers.

Click [here](#) to view the SIP account registration example.

To set it up, navigate to the web **Account > Basic > SIP Account** interface.

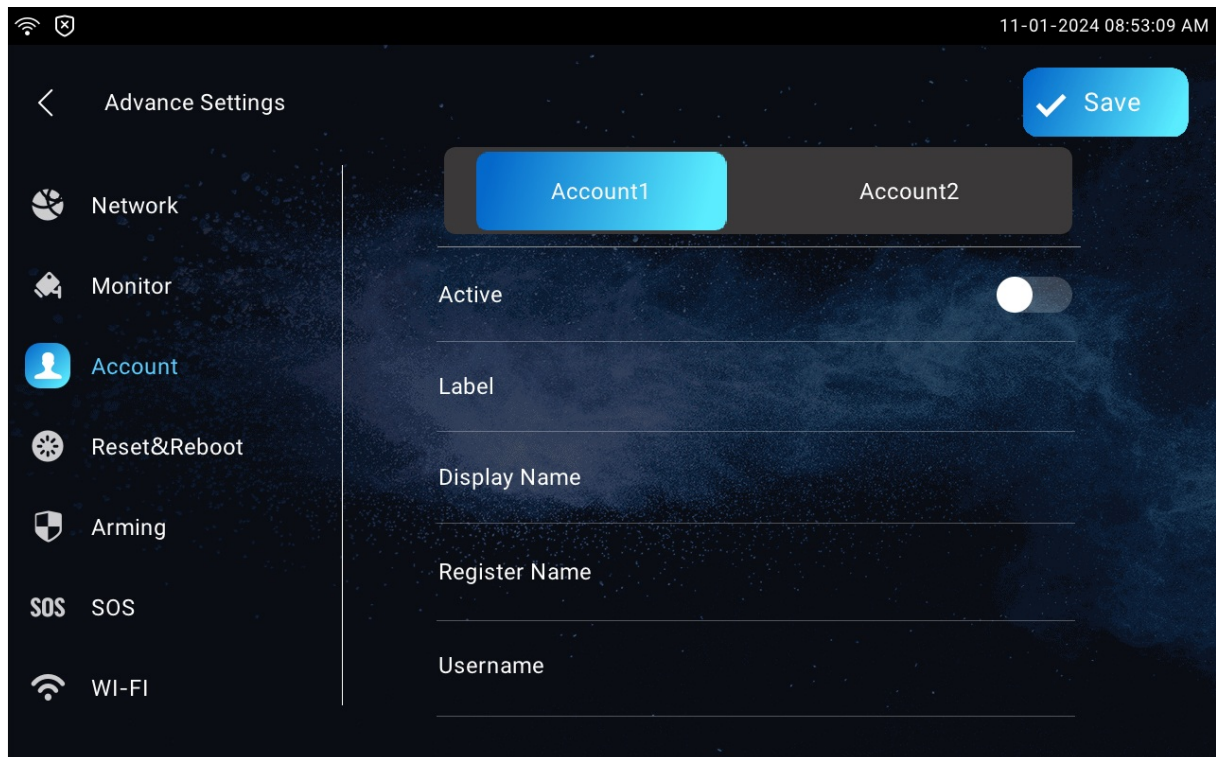

SIP Account	
Status	Disabled
Account	Account1 ▼
Account Enabled	<input type="checkbox"/>
Display Label	<input type="text"/>
Display Name	<input type="text"/>
Register Name	<input type="text"/>
Username	<input type="text"/>
Password	*****

- **Status:** Indicate whether the SIP account is registered or not.
- **Account:** Choose the account for configuration.
 - Account 1 is the default account for call processing. Also, it will be utilized when the Akuvox SmartPlus Cloud service is activated.
 - The system switches to Account 2 if Account 1 is not registered.
- **Display Label:** The label of the device.

- **Display Name:** The designation for Account 1 or 2 to be shown on the device itself on the calling screen.
- **Register Name:** Same as the username from the PBX server.
- **Username:** Same as the username from the PBX server for authentication.
- **Password:** Same as the password from the PBX server for authentication.

The SIP account can also be configured on the device **Settings > Advance Settings > Account** screen.

- **Account 1/Account 2:** The device supports 2 SIP accounts.
 - Account 1 is the default account for call processing. Also, it will be utilized when the Akuvox SmartPlus Cloud service is activated.
 - The system switches to Account 2 if Account 1 is not registered.
- **Active:** Check to activate the registered SIP account.
- **Label:** The label of the device.
- **Display Name:** The designation for Account 1 or 2 to be shown on the device itself on the calling screen.
- **Register Name:** Same as the username from the PBX server.
- **Username:** Same as the username from the PBX server for authentication.

- **Password:** Same as the password from the PBX server for authentication.

SIP Server Configuration

SIP servers enable devices to establish and manage call sessions with other intercom devices using the SIP protocol. They can be third-party servers or built-in PBX in Akuvox indoor monitor.

To set it up, go to **Settings > Advance Settings > Account** screen or navigate to the web **Account > Basic > SIP Account** interface.

SIP Server

SIP Port 5060

Preferred SIP Server		
Sip Server Address	<input type="text"/>	
Sip Server Port	<input type="text" value="5060"/>	(1024~65535)
Registration Period	<input type="text" value="1800"/>	(30~65535 Sec)

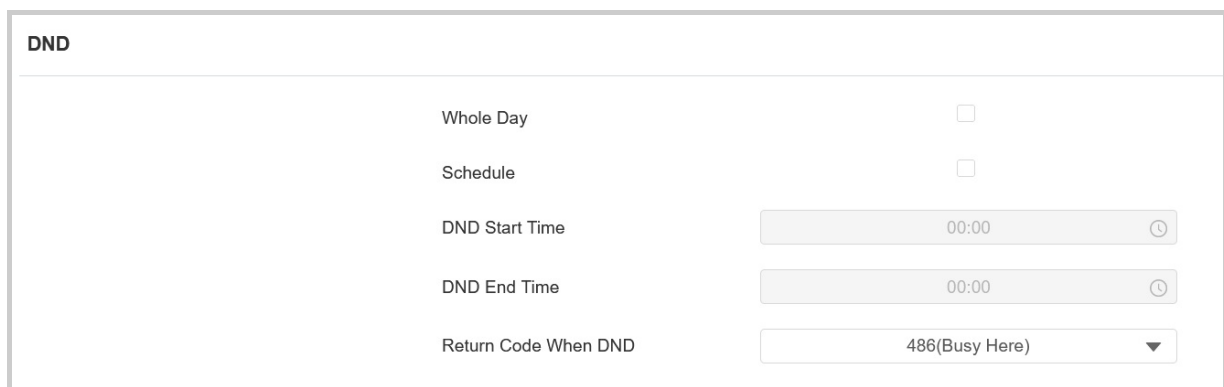

Alternate SIP Server		
Sip Server Address	<input type="text"/>	
Sip Server Port	<input type="text" value="5060"/>	(1024~65535)
Registration Period	<input type="text" value="1800"/>	(30~65535 Sec)

- **SIP Server Address:** Enter the server's IP address or its domain name.
- **SIP Server Port:** Specify the SIP server port for data transmission.
- **Registration Period:** Define the time limit for SIP account registration. Automatic re-registration will initiate if the account registration fails within this specified period.

SIP Call DND & Return Code Configuration

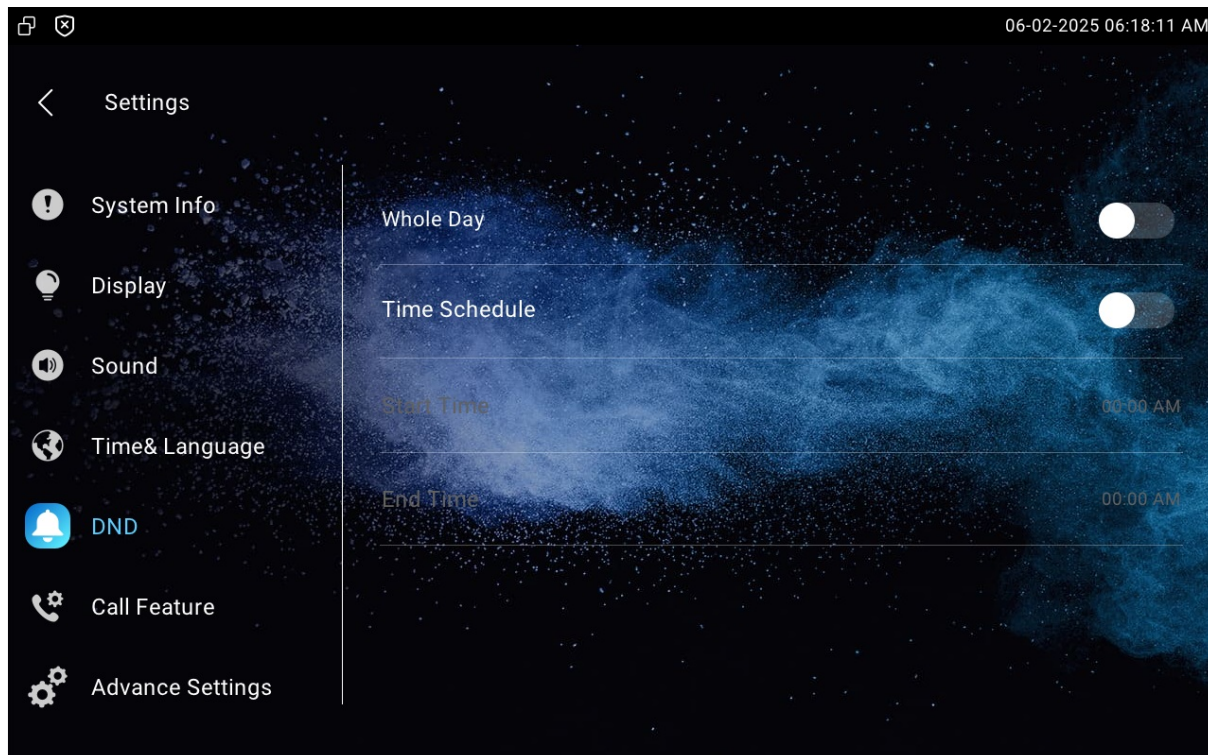

The Do Not Disturb(**DND**) feature prevents unwanted incoming SIP calls, ensuring uninterrupted focus. It also allows you to set a code to be sent to the SIP server when rejecting a call.

To set it up, navigate to **Device > Call Feature** interface.

DND	
Whole Day	<input type="checkbox"/>
Schedule	<input type="checkbox"/>
DND Start Time	00:00
DND End Time	00:00
Return Code When DND	486(Busy Here)

- **DND:** Check **Whole Day** or **Schedule** to enable the DND function. The DND function is disabled by default.
 - **Schedule:** Determine the DND period by selecting DND Start Time and DND End Time.
 - **Return Code When DND:** Specify the code sent to the caller via the SIP server when rejecting an incoming call in DND mode.
- DND can also be set up on the device **Settings > DND** screen.

Outbound Proxy Server

An outbound proxy server receives and forwards all requests the designated server. It is an optional configuration, but if set it up, all future SIP requests get sent there in the first instance.

To set it up, navigate to **Account > Basic** interface.

Outbound Proxy Server

Outbound Enabled

☐

Preferred Outbound Proxy Server

Preferred Outbound Proxy Server Port

5060

(1024~65535)

Alternate Outbound Proxy Server

Alternate Outbound Proxy Server Port

5060

(1024~65535)

- **Preferred Outbound Proxy Server:** Enter the SIP proxy IP address.
- **Preferred Outbound Proxy Server Port:** Set the port for establishing a call session via the outbound proxy server.
- **Alternate Outbound Proxy Server:** Enter the SIP proxy IP address to be used when the main proxy malfunctions.
- **Alternate Outbound Proxy Server Port:** Set the proxy port for establishing a call session via the backup outbound proxy server.

Device Local RTP

Real-time Transport Protocol(**RTP**) lets devices stream audio and video data over a network in real time.

To use RTP, devices need a range of ports. A port is like a channel for data on a network. By setting up RTP ports on your device and router, you can avoid network interference and improve audio and video quality.

To set it up, go to the web **Network > Advanced > Local RTP** interface.

Local RTP	
Starting RTP Port	<input type="text" value="11800"/> (1024~65535)
Max RTP Port	<input type="text" value="12000"/> (1024~65535)

- **Starting RTP Port:** The port value to establish the start point for the exclusive data transmission range.
- **Max RTP port:** The port value to establish the endpoint for the exclusive data transmission range.

Data Transmission Type

The device supports three data transmission protocols: User Datagram Protocol(UDP), Transmission Control Protocol(TCP), and Transport Layer Security(TLS).

To set it up, go to the web **Account > Basic > Transport Type** interface.

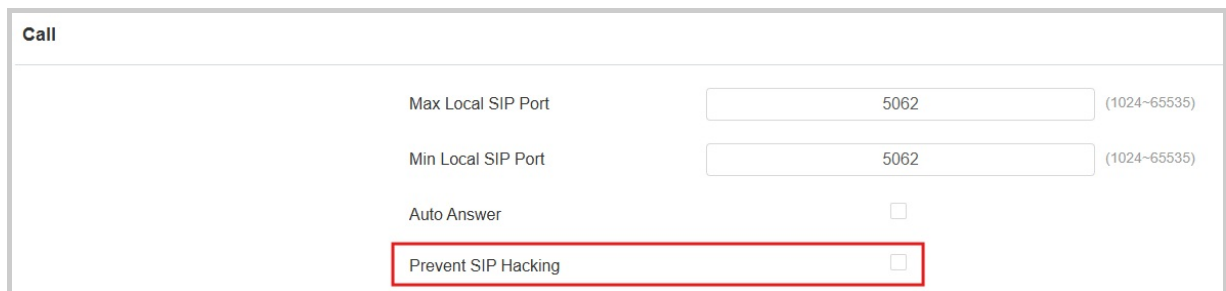

Transport Type	
Type	<input type="text" value="UDP"/> ▼

- **UDP:** An unreliable but very efficient transport layer protocol. It is the default transport protocol.
- **TCP:** A less efficient but reliable transport layer protocol.
- **TLS:** An encrypted and secured transport layer protocol. Select this option if you wish to encrypt the SIP messages for enhanced security or if the other party's server uses TLS. To use it, you need to upload certificates for authentication

SIP Hacking Protection

Internet phone eavesdropping is a network attack that allows unauthorized parties to intercept and access the content of the communication sessions between intercom users. This can expose sensitive and confidential information to the attackers. SIP hacking protection is a technique that secures SIP calls from being compromised on the Internet.

To set it up, go to the web **Account > Advanced > Call** interface.

Call	
Max Local SIP Port	5062 (1024~65535)
Min Local SIP Port	5062 (1024~65535)
Auto Answer	<input type="checkbox"/>
Prevent SIP Hacking	<input type="checkbox"/>

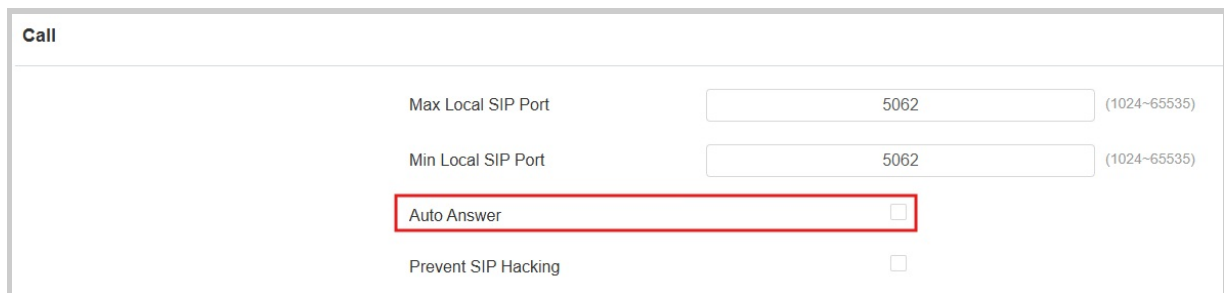

- **Prevent SIP Hacking:** Activate this feature to only receive calls from contacts in the whitelist. This protects user's private and secret information from potential hackers during SIP calls.

Call Settings

Auto-answer Configuration

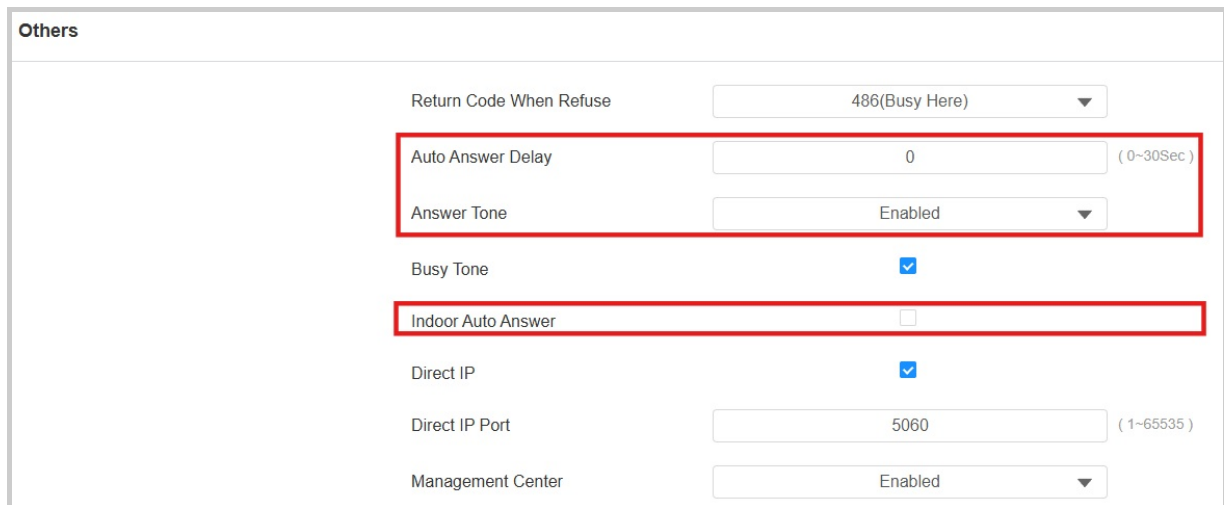

Auto-answer feature allows the device to automatically pick up incoming calls without any manual intervention. You can also customize this feature by setting the time duration for auto-answering.

To enable the auto-answer feature, go to the web **Account > Advanced > Call** interface.

The screenshot shows the 'Call' settings page. It includes fields for 'Max Local SIP Port' (5062) and 'Min Local SIP Port' (5062), both with a range of (1024~65535). The 'Auto Answer' checkbox is checked and highlighted with a red box. Below it, the 'Prevent SIP Hacking' checkbox is unchecked.

To set it up, go to the web **Device > Call Feature > Others** interface.

The screenshot shows the 'Others' settings page. It includes a 'Return Code When Refuse' dropdown set to '486(Busy Here)'. The 'Auto Answer Delay' is set to '0' (range 0~30Sec) and is highlighted with a red box. The 'Answer Tone' is set to 'Enabled' and is also highlighted with a red box. The 'Indoor Auto Answer' checkbox is unchecked and highlighted with a red box. Other settings include 'Busy Tone' (checked), 'Direct IP' (checked), 'Direct IP Port' (5060, range 1~65535), and 'Management Center' (Enabled).

- **Auto Answer Delay:** Set the time interval for the call to be automatically picked up after ringing. For example, if you set the delay time to 5 seconds, the device will answer the call automatically after 5 seconds.
- **Answer Tone:** Select the tone for answering calls automatically.
- **Indoor Auto Answer:** Allow calls from other indoor monitors to be answered by the device automatically.

Other Options:

- **Return Code When Refuse:** Decide the code sent to the caller side via the SIP server when rejecting the incoming call.
- **Busy Tone:** Decide whether to sound a busy tone when a call is hung up by the callee.
- **Management Center:** Decide whether to generate the contact labeled Management Center.
 - When the device is deployed on the SmartPlus Cloud, the cloud system will issue the SmartPlus Property Manager App and the guard phone R49 as a contact labeled Management Center. When this function is disabled, the PM App and guard phone will be displayed as contacts separately.
 - When the device is deployed on the SDMC, SDMC is shown as Management Center on the device screen. When the function is disabled, no contacts will be displayed as Management Center.

Auto-answer Allowlist Setting

Auto-answer can only be applicable to the SIP or IP numbers that are already added in the auto-answer allow list of your indoor monitor. Therefore, you are required to configure or edit the numbers in the allow list on the web interface.

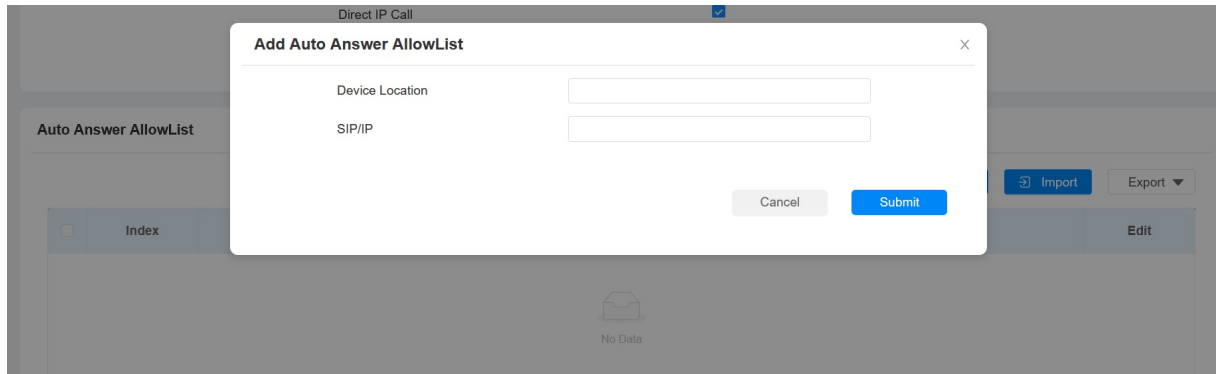

To set it up, go to the **Device > Call Feature > Auto Answer AllowList** interface. Click **+Add** to add the allowed device.

Auto Answer AllowList

+ Add Import Export

Index	Device Location	SIP/IP	Edit
No Data			

Delete Delete All Prev 1/1 Next Go To Page 1 Go

- **Device Location:** Specify the allowed device's name or location.
- **SIP/IP:** Enter the allowed device's SIP or IP number.

You can import and export the auto-answer allowlist for quick setup.

Note

- The supported imported/exported file format is XML or CSV.
- SIP/IP numbers must be set up in the contacts of the indoor monitor before they can be valid for the auto-answer function.

Intercom Preview

To see the image at the door station before answering the incoming call, you can enable the intercom preview function on web **Device > Intercom > Intercom** interface.

- **Intercom Preview:** When it is enabled, the group call is not available.

Emergency Call

The Emergency Call function is designed for urgent situations, particularly beneficial for the elderly and children. Users can display the SOS button on the indoor monitor's screen. When the button is pressed, the device automatically calls the designated emergency contacts, ensuring quick help when needed.

To display the emergency call softkey, navigate to the web **Device > Display Setting > Home Page Display/More Page Display** interface.

Home Page Display

Example

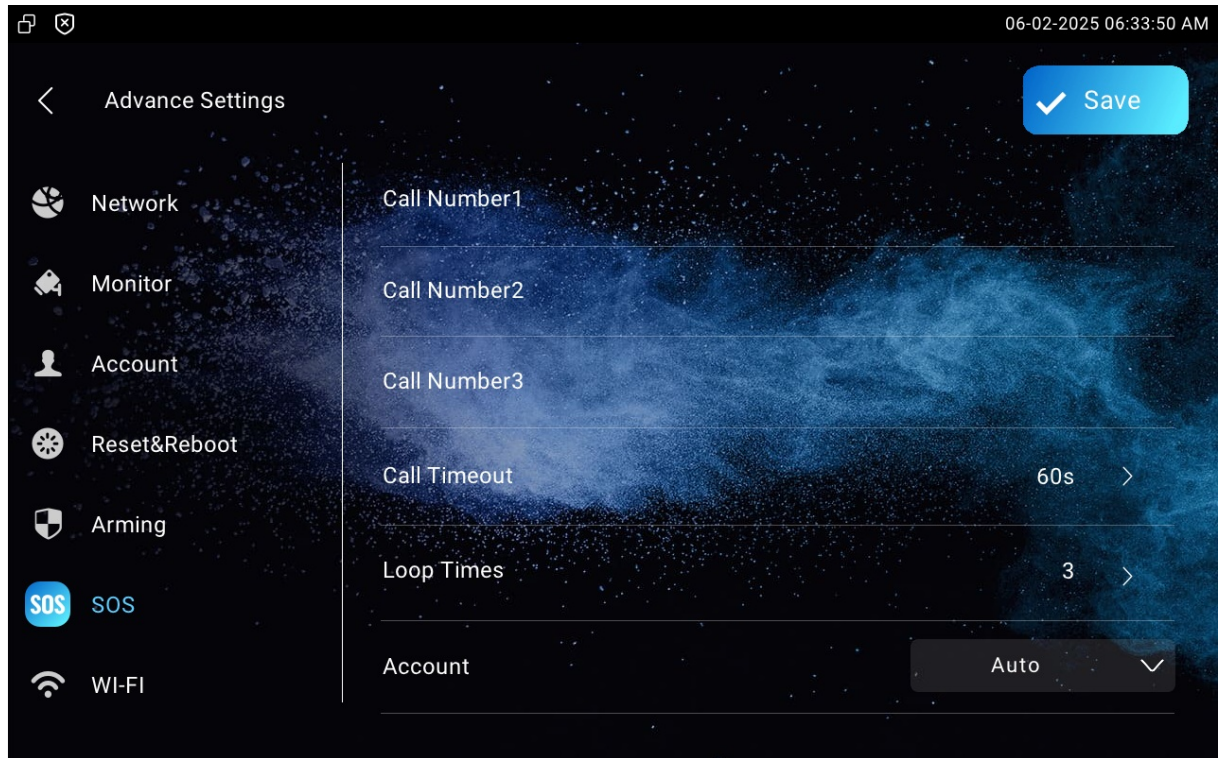

Area	Type	Value	Label	Icon(max size:100*100)
Area1	SOS		SOS	Not selected any files Select File Delete
Area2	Message		Message	Not selected any files Select File Delete
Area3	DND		DND	
Area4	Monitor		Monitor	Not selected any files Select File Delete

More Page Display

Example

Area	Type	Value	Label	Icon(max size:100*100)
Area1	Contacts		Contacts	Not selected any files Select File Delete
Area2	Settings		Settings	Not selected any files Select File Delete
Area3	Arming		Arming	Not selected any files Select File Delete
Area4	N/A			Not selected any files Select File Delete
Area5	N/A			Not selected any files Select File Delete
Area6	N/A			Not selected any files Select File Delete

You also need to set up specific parameters on the device or the device web interface. To set it up on the device, go to **Settings > Advance Settings > SOS** screen.

- **Call Number:** 3 SOS numbers can be set up. Once users press the SOS key on the home page, indoor monitors will call out the numbers in order.
- **Call Timeout:** The call duration for each number. When users call out and the other side does not answer within the timeout, indoor monitors will continue to call the next number.
- **Loop Times:** Set up the call loop times.
- **Account:** The account to make SOS calls.

To set it up on the web interface, go to **Device > Intercom > SOS** interface.

SOS	
Account	Auto ▼
Call Number 1	<input type="text"/>
Call Number 2	<input type="text"/>
Call Number 3	<input type="text"/>
Call Timeout(Sec)	60s ▼
Loop Times	3 ▼

Multicast

The Multicast function allows one-to-many broadcasting for different purposes. For example, it enables the indoor monitor to announce messages from the kitchen to other rooms or to broadcast notifications from the management office to multiple locations. In these scenarios, indoor monitors can listen to or send audio broadcasts.

Click [here](#) to watch the demonstration video.

To set it up, go to the web **Device > Multicast** interface.

Multicast List

Multicast Group	Multicast Address	Enabled
Multicast Group 1	<input type="text" value="224.1.6.11:51230"/>	<input type="checkbox"/>
Multicast Group 2	<input type="text" value="224.1.6.11:51231"/>	<input type="checkbox"/>
Multicast Group 3	<input type="text" value="224.1.6.11:51232"/>	<input type="checkbox"/>

Listen List

Listen Group	Listen Address	Label
Listen Group 1	<input type="text"/>	<input type="text"/>
Listen Group 2	<input type="text"/>	<input type="text"/>
Listen Group 3	<input type="text"/>	<input type="text"/>

- **Multicast Address:** The multicast IP address is the same as the listen address.
- **Listen Address:** The listen address is the same as the multicast address.
- **Label:** The label name will be shown on the calling screen.

Note

The multicast address entered should be within the specific range and not all multicast IP addresses are valid. Please consult Akuvox tech team for more information.

Call Forwarding

Call Forward is a feature that allows for transferring incoming calls to another number. Users can set up call forwarding according to different situations, such as always forwarding calls, forwarding calls when the indoor monitor is busy, or when it doesn't pick up the call.

To set it up, go to the web **Device > Call Feature > Call Forward** interface. This feature can also be set up on the device **Settings > Call Feature** screen.

Call Forward	
Account	Account1 ▼
Always Forward	Disabled ▼
Target Number	
Busy Forward	Disabled ▼
Target Number	
No Answer Forward	Disabled ▼
Target Number	
No Answer Ring Time (Sec)	30 ▼

- **Account:** The account or direct IP call to implement the call forwarding feature.
- **Always Forward:** All incoming calls will be automatically forwarded to a specific number.
- **Busy Forward:** Incoming calls will be forwarded to a specific number if the device is busy.
- **No Answer Forward:** Incoming calls will be forwarded to a specific number if the call is not picked up within no answer ring time.
- **Target Number:** The specific forward number when Always Forward, Busy Forward, or No Answer Forward is enabled.
- **No Answer Ring Time(Sec):** The time ranges from 0-120 seconds. This option appears when No Answer Forward is enabled.

Web Call

The web call feature allows for making calls via the device's web interface, commonly used for remote call testing purposes.

To set it up, navigate to the **Contacts > Local Contacts > Dial Number** interface. Enter the target number and select the account to dial out.

Audio & Video Codec Configuration for SIP Calls

Audio Codec Configuration

The device supports four types of codec (PCMU, PCMA, G729, and G722) for encoding and decoding the audio data during the call session. Each codec varies in terms of sound quality. You can select the specific codec with different bandwidths and sample rates flexibly according to the actual network environment.

To set it up, go to the web **Account > Advanced** interface.

The screenshot shows the 'Audio Codecs' configuration page. It features two main sections: 'Disabled Codescs' on the left, which is currently empty (0 items), and 'Enabled Codescs' on the right, which contains four items: G729, G722, PCMU, and PCMA. Each item in the 'Enabled Codescs' list has an unchecked checkbox next to it. Between the two sections are navigation arrows (greater than and less than signs). To the right of the 'Enabled Codescs' list are up and down arrow buttons for scrolling.

Please refer to the bandwidth consumption and sample rate for the codec types below:

Codec Type	Bandwidth Consumption	Sample Rate
PCMA	64 kbit/s	8kHz
PCMU	64 kbit/s	8kHz
G729	8 kbit/s	8kHz
G722	64 kbit/s	16kHz

Video Codec Configuration

The door phone supports the H264 codec that provides better video quality at a much lower bit rate with different video quality and payload.

To set it up, navigate to the web **Account > Advanced** interface.

Video Codec

Name	<input checked="" type="checkbox"/> H264
Resolution	720P ▼
Bitrate	2048 ▼
Payload	104 ▼

- **Resolution:** Specify the code resolution for the video quality.
- **Bitrate:** Select the video stream bitrate. It varies by the resolution.
- **Payload:** The payload ranges from 90-119 for the audio/video configuration file.

Intercom Message Setting

Manage Messages

You can check, create and clear messages as needed on the device **Messages** screen.

Tap **+Add** to create a message and tap **Clear** to delete messages.

- **Notification:** The message from the property manager. This feature is only available when using SDMC or Akuvox SmartPlus.
- **Text Message:** To send, receive, or manage the text message here.
- **Family Message:** Audio messages recorded for family members.

Access Control Configuration

Local Relay

A local relay is an external unit that is physically nearby and directly connected to the intercom device. It allows the intercom system to trigger actions, such as unlocking a door, based on user input or authorization.

To set it up, go to the web **Device > Relay > Relay Setting** interface.

Relay Setting

Local Relay

Remote Control

Disabled

DTMF

#

Hold Delay

3

Relay Type

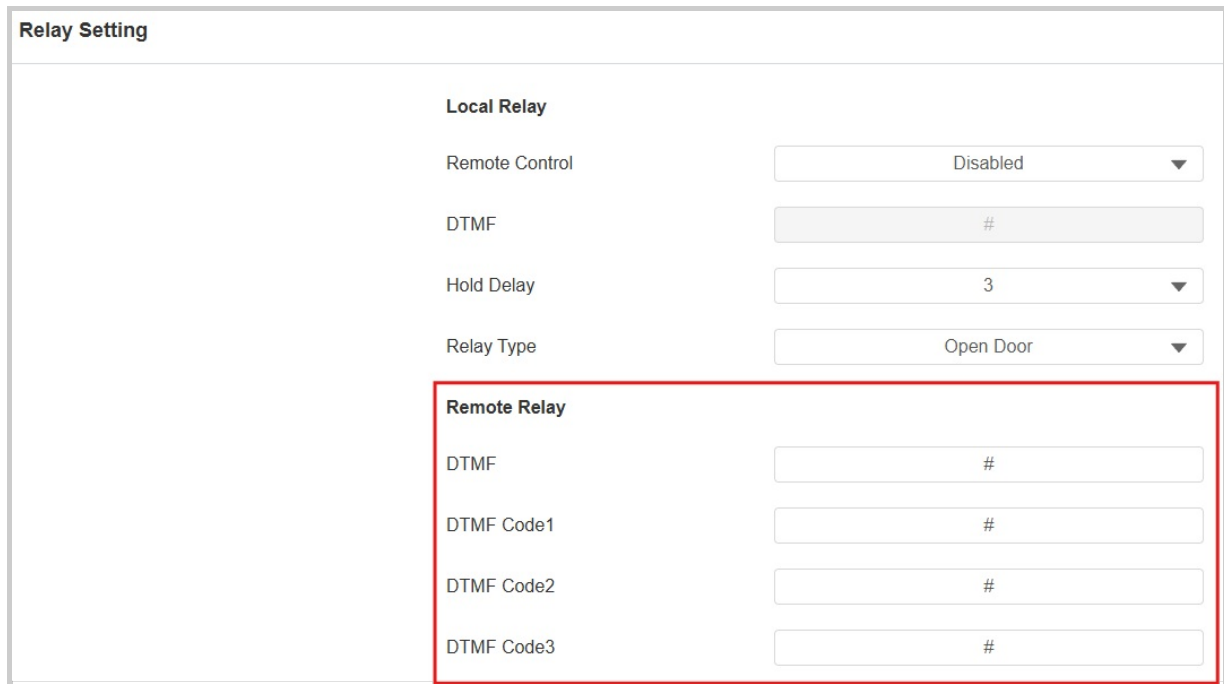

Open Door

- **Remote Control:** Decide whether to control the indoor monitor's relay remotely by another intercom device. It is disabled by default.
- **DTMF:** The DTMF code to trigger the local relay.
- **Hold Delay:** Determine how long the relay stays activated. For example, if set to 5 seconds, the relay remains to be opened for 5 seconds before closing.
- **Relay Type:**
 - **Chime Bell Setting:** When there is a call and the relay is triggered, the chime bell will ring.
 - **Open Door:** When the unlock icon is pressed and the relay is triggered, the door will be opened.

Remote Relay

The remote relay refers to the relay of another intercom, such as a door phone. During calls, users can enter a DTMF code or press the Unlock tab to unlock the door lock connected to the door phone.

Set it up on the web **Device > Relay > Relay Setting > Remote Relay** interface.

Relay Setting	
Local Relay	
Remote Control	Disabled
DTMF	#
Hold Delay	3
Relay Type	Open Door
Remote Relay	
DTMF	#
DTMF Code1	#
DTMF Code2	#
DTMF Code3	#

- **DTMF Code:** Define the DTMF code within the range(0-9 and *,#) for the remote relay.

Web Relay

A web relay has a built-in web server and can be controlled via the Internet or a local network. The device can use a web relay to either control a local relay, or a remote relay somewhere else on the network.

Click [here](#) to view how to set up web relay.

To set it up, go to the web **Device > Relay > Web Relay** interface.

Web Relay Setting

IP Address

Password

Web Relay Action Setting

Action ID	IP	SIP	Web Relay Action
1			
2			
3			
4			
5			

- **IP Address:** The web relay IP address provided by the web relay manufacturer.
- **Username:** The user name provided by the web relay manufacturer.

- **Password:** The manufacturer-provided authentication key for the web relay. Authentication occurs via HTTP. Leaving the Password field blank indicates non-use of HTTP authentication. You can define the password using HTTP GET in the Web Relay Action field.
- **IP/SIP:** The relay extension information, which can be an IP address or SIP account of an intercom device such as an indoor monitor, so that the specific action command will be sent when unlock is performed on the intercom device. This setting is optional.
- **Web Relay Action:** Configure the actions to be performed by the web relay upon triggering. Enter the manufacturer-provided URLs for various actions.

Note

If the URL includes full HTTP content(e.g., `http://admin:admin@192.168.1.2/state.xml?relayState=2`), it doesn't rely on the IP address that you entered above. However, if the URL is simpler (e.g., `"state.xml?relayState=2"`), the relay uses the entered IP address.

Door-opening Configuration

Unlock by DTMF Code

Dual-tone multi-frequency signaling(**DTMF**) is a way of sending signals over phone lines by using different voice-frequency bands. Users can use the DTMF function to unlock the door for visitors during a call by either typing the DTMF code on the soft keypad, or tapping the unlock tab with the DTMF code on the screen.

To set it up, go to **Device > Relay > Relay Setting** interface.

To configure the DTMF code transport format, navigate to the web **Account > Advanced > DTMF** interface.

DTMF

Mode

RFC2833

DTMF Code Transport Format

Disabled

DTMF Payload

101

(96~127)

- **Type:** Select from the provided options.
- **DTMF Code Transport Format:** There are four options, Disabled, DTMF, DTMF-Relay, and Telephone-Event. Configure it only when the third-party device that receives the DTMF code adopts the **Info** transport format. **Info** transfers the DTMF code via signaling while other transport format does it via RTP audio packet transmission. Select the DTMF transferring format according to the third-party device.
- **DTMF Payload:** It is for data transmission identification ranging from 96-127.

Note

To open the door with DTMF, the intercom devices that send and receive the unlock command must use the same mode and code. Otherwise, the DTMF unlock may fail. See [here](#) for the detailed DTMF configuration steps.

Unlock via HTTP Command

The device supports remote door unlocking via an HTTP command. Simply enable this feature and input the HTTP command (URL) for the device. This will trigger the relay and open the door, even if the users are away from the device.

To set it up, go to the web **Device > Relay > Open Relay via HTTP** interface.

The screenshot shows the 'Open Relay Via HTTP' configuration page. It contains the following fields:

- Enabled:** A checkbox that is currently unchecked.
- Username:** A text input field.
- Password:** A password input field with masked characters (*****).
- Remote Open Relay Via HTTP AllowList:** A checkbox that is currently unchecked.

- **Username:** Set a username for authentication in HTTP command URLs.
- **Password:** Set a password for authentication in HTTP command URLs.
- **Remote Open Relay Via HTTP AllowList:** Enable it and type in the IP address of the server that you allow to send the HTTP command to the indoor monitor and trigger the local relay.

Note

- If you do not set up the username and password, the remote door phone can trigger the indoor monitor's relay without authentication.
- The URL format is <http://{deviceIP}/fcgi/OpenDoor?action=OpenDoor&DoorNum=1>.

You can also set up HTTP commands to remotely control relays connected to door phones, go to the web **Device > Relay > Remote Relay By HTTP** interface.

Remote Relay By HTTP

3 x

4 x

Cancel

Submit

- **IP/SIP:** Specify the IP or SIP number of the door phone.
- **URL:** Enter the HTTP URL.
- **Username:** Enter the username the same as that is configured on the door phone's web interface.
- **Password:** Enter the password the same as that is configured on the door phone's web interface.
- **DoorNum:** Specify the door to be opened.

Tip

Here is an HTTP command URL example for relay triggering.

Door phone's IP **Preset credentials for authentication**

http://192.168.35.127/fcgi/do?action=OpenDoor&UserName=admin&Password=12345&DoorNum=1

ID of Relay to be triggered

Note

The HTTP format for relay triggering varies depending on whether the device's high secure mode is enabled. Please refer to this how-to guide [Opening the Door via HTTP Command](#) for more information.

Import/Export HTTP Commands

Navigate to the web **Device > Relay > Remote Relay By HTTP** interface. The exported file is in TGZ format. The imported file should be in XML format.

Security

Monitor and Image

Monitor Setting

You can add video streams using RTSP. If the Display in Call function is enabled, the video of the added monitor device will show up when it calls the indoor monitor.

To set it up, go to the **Device > Monitor** interface.

Monitor Setting

Auto Loop Play

☒

Loop Duration

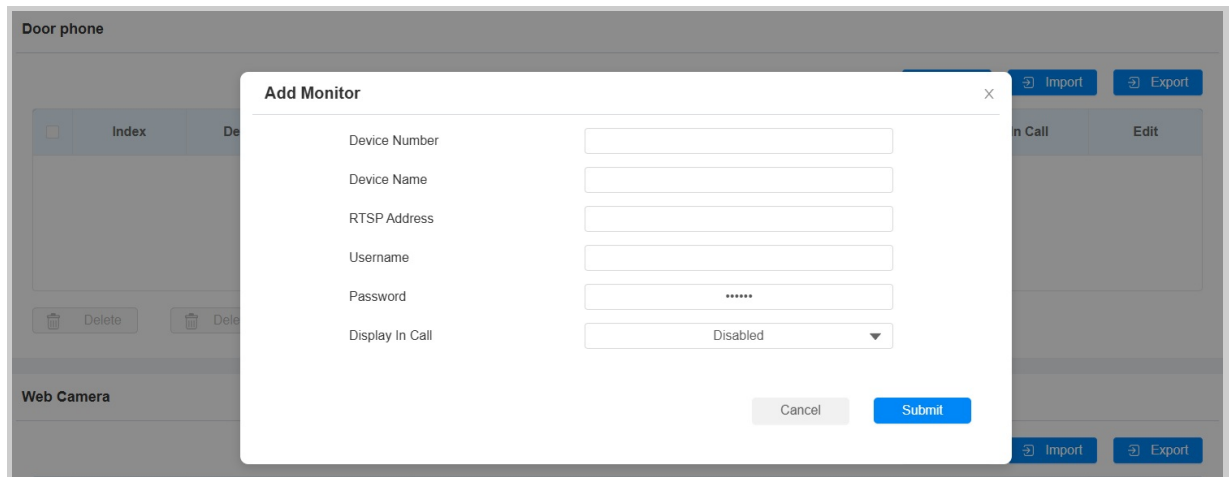

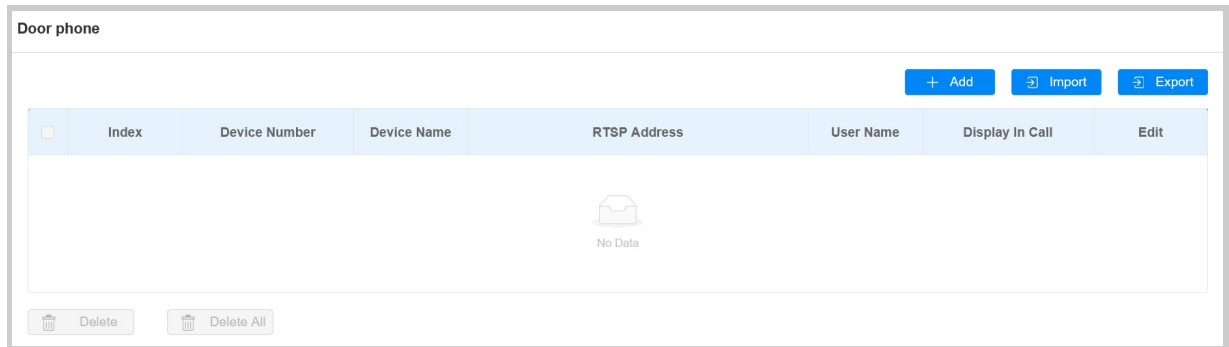

1 minute ▼

24/7 Monitor Mode

Disabled ▼

- **Auto Loop Play:** Set whether to play all monitoring streams in rotation.
- **Loop Duration:** The duration of playing each monitoring stream. The default is 1 minute.
- **24/7 Monitor Mode:** When enabled, the indoor monitor displays the monitoring screen for 6 hours, then plays a 10-second screensaver before resuming the monitoring stream. If users tap the screen while the monitoring time has been active for the last half hour, the device extends the monitoring display for an additional 30 minutes.

On the **Device > Monitor > Door phone** section, click **+Add** to add a monitor.

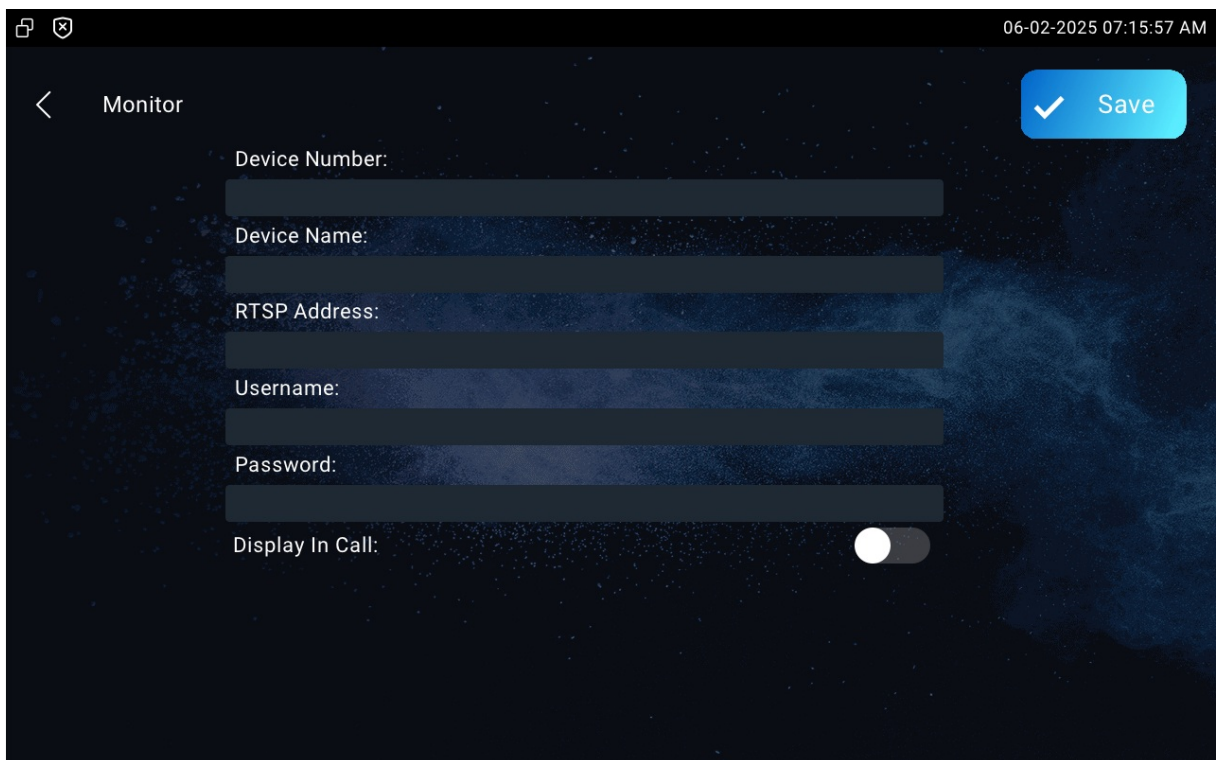

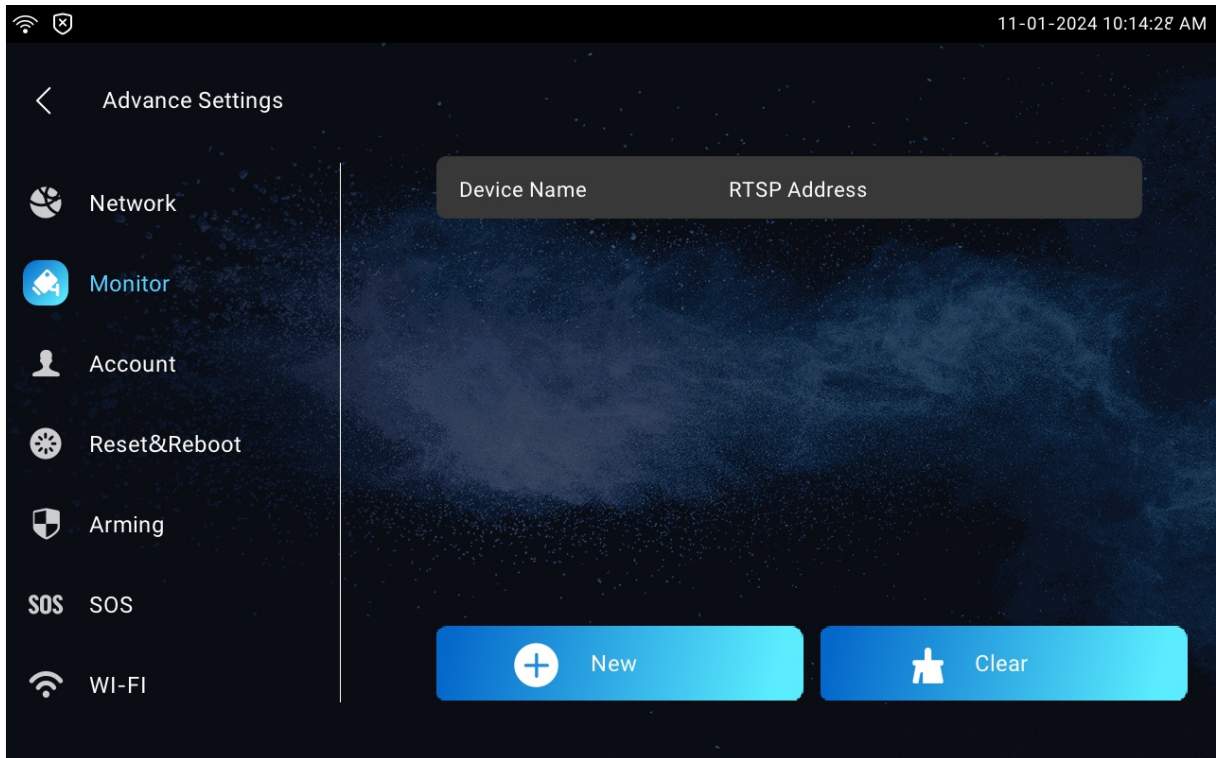

- **Device Number:** The device's SIP/IP number for identification.
- **Device Name:** The device name for identification.
- **RTSP Address:** The RTSP address of the monitoring device. RTSP format: rtsp://Device IP address/live/ch00_0.
- **Username:** The username of the monitoring device for authentication.
- **Password:** The password of the monitoring device for authentication.
- **Display In Call:** Enable it to display the monitoring video during a call.

You can export the monitoring device settings in a TGZ file and import a file in XML format.

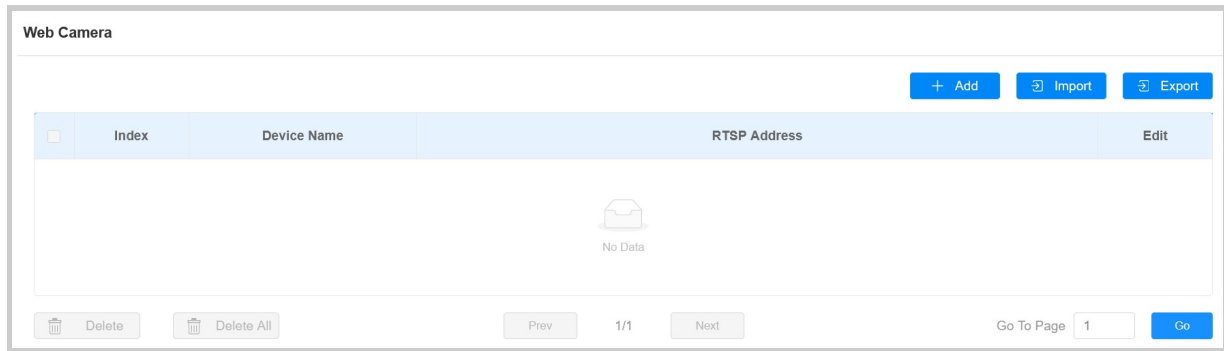

Monitor feature can also be set up on the device **Settings > Advance Settings > Monitor** screen.

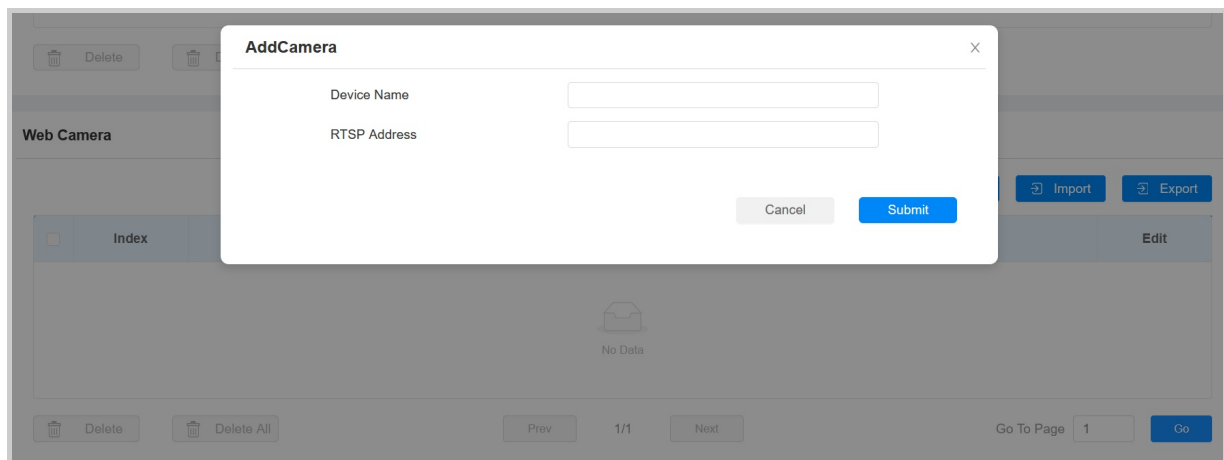

Web Camera Setting

You can configure the monitor feature for third-party cameras on the web **Device > Monitor > Web Camera** interface.

Click **Add** to add a camera.

- **Device Name:** The name of the third-party camera.
- **RTSP Address:** The RTSP URL for the third-party camera.

You can import or export the monitor list in batches on the same interface. The export file is in TGZ format. The imported file only supports the XML format.

Video Image Capturing

The device lets users take a screenshot during a video call or while using the monitor if they notice anything unusual. To take a screenshot, simply tap the Capture button.

RTSP Authentication

With RTSP authentication, users can monitor the indoor monitor via RTSP audio stream. This feature can be applied to, for example, listen to the baby in the baby's room for safety.

To set it up, go to the **Settings > Basic** interface.

RTSP Setting	
RTSP Audio Enable	Disabled ▼
Authorization Type	Digest
Username	admin
Password	*****

- **RTSP Audio Enable:** Enable it if you want to monitor the device via RTSP audio stream.
- **Authorization Type:** It is Digest by default.
- **User Name:** Set the username for the authentication.
- **Password:** Set the password for the authentication.

Alarm and Arming Configuration

The Arming function is designed to enhance home security by offering three modes with custom zone settings for connected sensors. When armed, the device will sound a siren and notify specific people if a sensor detects something unusual.

Set up Location-based Alarm Sensors

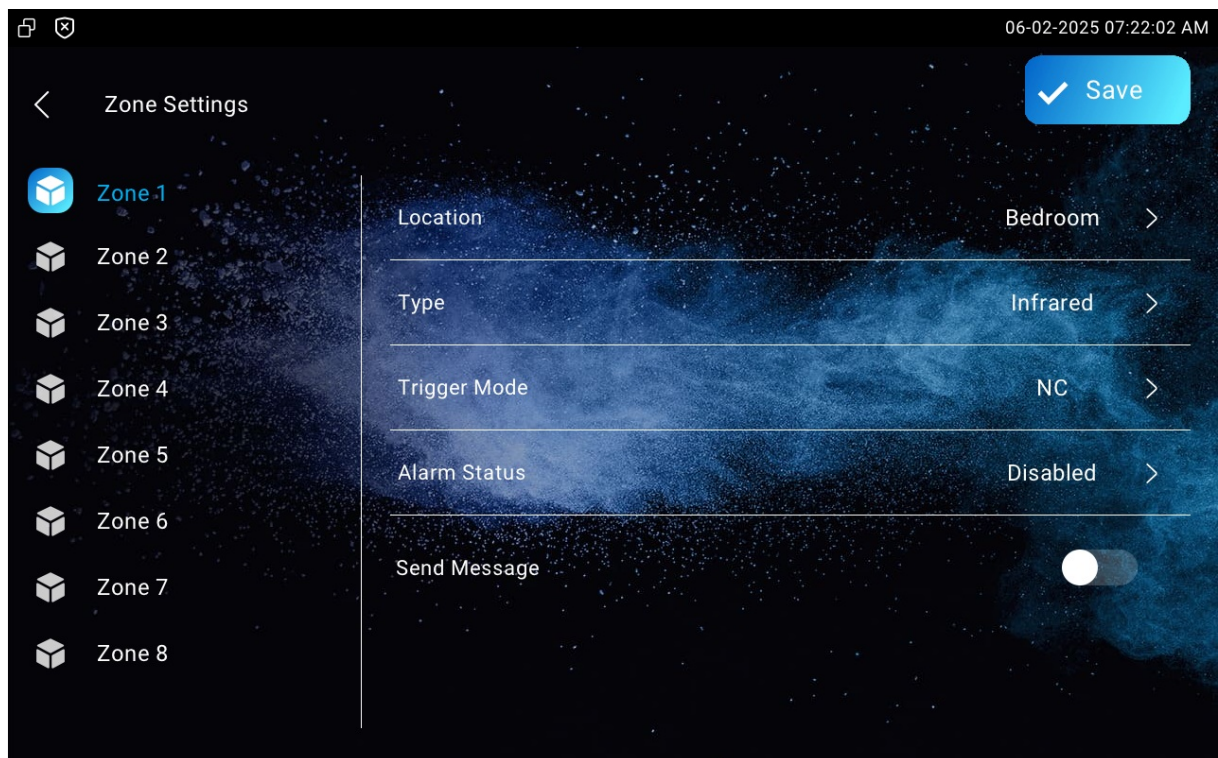

To set up a location-based alarm sensor, go to the web **Arming > Zone Setting > Zone Setting** interface.

Zone Setting				
Zone	Location	Zone Type	Trigger Mode	Status
Zone1	Bedroom	Infrared	NC	Disabled
Zone2	Bedroom	Infrared	NC	Disabled
Zone3	Bedroom	Infrared	NC	Disabled
Zone4	Bedroom	Infrared	NC	Disabled
Zone5	Bedroom	Infrared	NC	Disabled
Zone6	Bedroom	Infrared	NC	Disabled
Zone7	Bedroom	Infrared	NC	Disabled
Zone8	Bedroom	Infrared	NC	Disabled

- **Location:** Indicate where the alarm sensor is installed. There are ten location types: Bedroom, Gate, Door, Guest room, Hall, Window, Balcony, Kitchen, Study, and Bathroom.
- **Zone Type:** The alarm sensor types.
- **Trigger Mode:** Set sensor trigger mode between NC and NO.
- **Status:** Set the alarm sensor status among three options: Enabled, Disabled, and 24H.
 - **Enabled:** The alarm needs to be set again after disarming.
 - **Disabled:** Disarm the alarm.
 - **24H:** The alarm sensor will stay enabled for 24 hours without setting up the alarm manually again after the alarm is disarmed. If any of the zones is enabled or set to **24H**, the alarm-related icons will be displayed on the home screen for quick access.

You can also set up alarm sensors on the **Settings > Advance Settings > Arming** screen.

- **Send Message:** If enabled, when the alarm is triggered, the device can send messages.

Select an Arming Mode

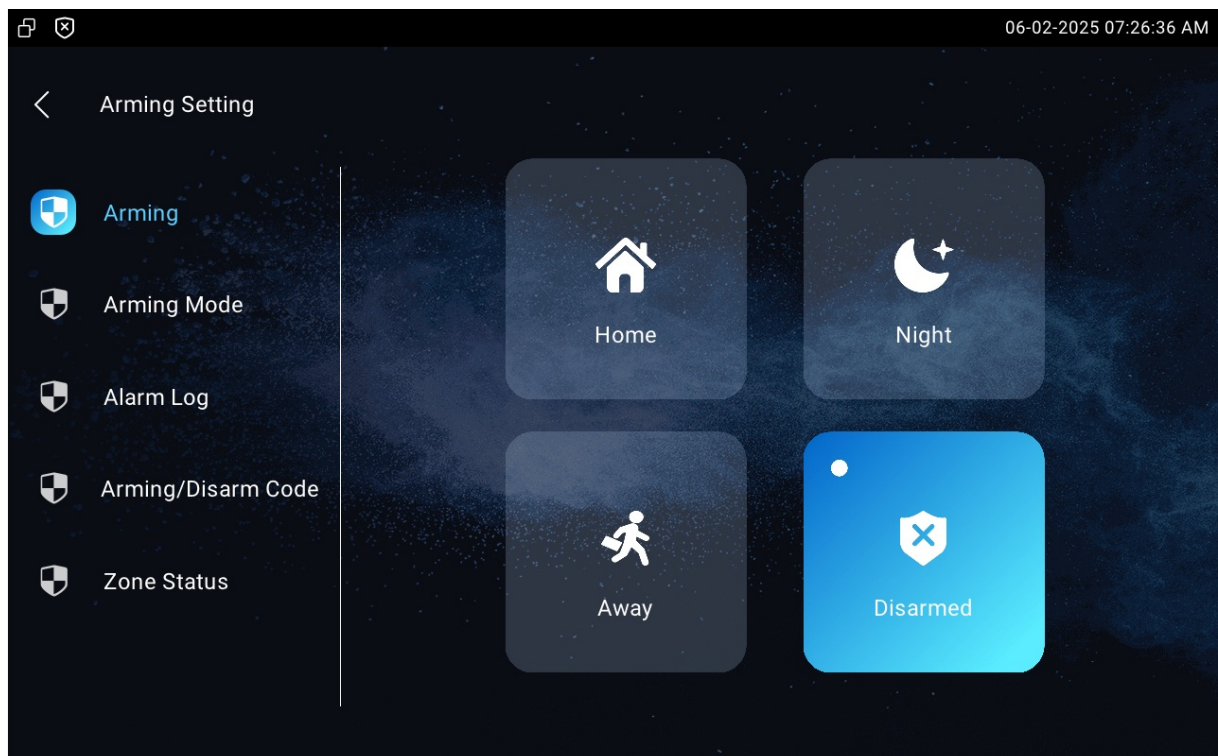

To select an arming mode, go to the **Arming > Arming Mode** interface.

- **Synchronize Arming & Alarm:** It is disabled by default. When enabled, the device synchronizes arming and alarms with other indoor monitors in the same room (if deployed on SmartPlus Cloud) or within the same node (if deployed on SDMC or on-premise).

After displaying the Arming tab on the device screen, users can switch arming mode on the Arming screen.

Set the arming tab display on the **Device > Display Setting** interface.

Set up Alarm Sensors in Different Arming Modes

To configure the alarm in different modes, go to the **Arming > Arming Mode** interface.

Home					
Zone	Location	Zone Type	Defence Delay	Alarm Delay	Status
Zone1	Bedroom	Infrared	30s	90s	<input type="checkbox"/>
Zone2	Bedroom	Infrared	30s	90s	<input type="checkbox"/>
Zone3	Bedroom	Infrared	30s	90s	<input type="checkbox"/>
Zone4	Bedroom	Infrared	30s	90s	<input type="checkbox"/>
Zone5	Bedroom	Infrared	30s	90s	<input type="checkbox"/>
Zone6	Bedroom	Infrared	30s	90s	<input type="checkbox"/>
Zone7	Bedroom	Infrared	30s	90s	<input type="checkbox"/>
Zone8	Bedroom	Infrared	30s	90s	<input type="checkbox"/>

- **Location:** Display which location the detection device is in, including Bedroom, Guest room, Hall, Window, Balcony, Kitchen, Study, and Bathroom.
- **Zone Type:** Display the alarm sensor type.
- **Defence Delay:** It means when users change the arming mode from other modes, there will be 30 seconds delay time to get activated.
- **Alarm Delay:** It means when the sensor is triggered, there will be 90 seconds delay time to announce the notification.
- **Status:** Enable or disable Arming Mode on the corresponding zone.

You can also set it up on the **Arming > Arming Mode** screen.

Configure Alarm Text

Once the alarm sensor is configured, you can access the device's web interface to personalize the alert content displayed on the screen when an alarm is triggered.

To set it up, navigate to the web **Arming > Zone Setting > Customized Alarm** interface.

Customized Alarm

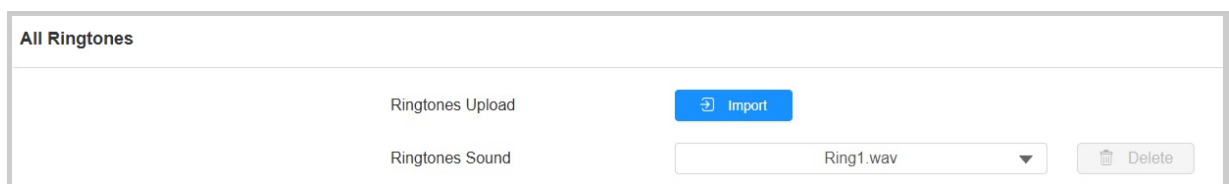

Customized Alarm Enabled ☐

Zone	Alarm Content
Zone1	Alarm was triggered
Zone2	Alarm was triggered
Zone3	Alarm was triggered
Zone4	Alarm was triggered
Zone5	Alarm was triggered
Zone6	Alarm was triggered
Zone7	Alarm was triggered
Zone8	Alarm was triggered

- **Alarm Content:** The alarm text will be displayed on the device screen when an arming is triggered.

Configure Alarm Ringtone

You can upload a customized alarm ringtone by choosing the local audio file on the web **Device > Audio** interface.

All Ringtones

Ringtones Upload

Ringtones Sound Ring1.wav

Alarm Action Configuration

When the alarm sensor is triggered, it can start different actions, such as HTTP commands, SIP messages, calls, and local relay activation after setup.

To select and set up actions, go to the web **Arming > Alarm Action** interface.

Alarm Action via HTTP Command

To set up the HTTP command action, you can select **Enabled** in the **Send HTTP** field to enable the actions for the alarm sensor installed in different locations. Then enter the HTTP command provided by the device manufacturer on which the action is to be carried.

HTTP Command Setting		
Zone	HTTP Command	Send HTTP Enabled
Zone1	http:// <input type="text"/>	Disabled ▼
Zone2	http:// <input type="text"/>	Disabled ▼
Zone3	http:// <input type="text"/>	Disabled ▼
Zone4	http:// <input type="text"/>	Disabled ▼
Zone5	http:// <input type="text"/>	Disabled ▼
Zone6	http:// <input type="text"/>	Disabled ▼
Zone7	http:// <input type="text"/>	Disabled ▼
Zone8	http:// <input type="text"/>	Disabled ▼

- **Send HTTP Enabled:** Enable it if you want the action to be implemented on a designated third-party device.
- **HTTP Command:** Enter the HTTP command provided by the third-party device manufacturer.

Alarm Action via SIP Message

The device can send messages to a designated device when the alarm is triggered. To set this up, enter a SIP number or IP address along with the message content.

SIP Message Setting		
Receiver <input type="text"/>		
Zone	SIP Message	Send Sip Message
Zone1	<input type="text"/>	Disabled ▼
Zone2	<input type="text"/>	Disabled ▼
Zone3	<input type="text"/>	Disabled ▼
Zone4	<input type="text"/>	Disabled ▼
Zone5	<input type="text"/>	Disabled ▼
Zone6	<input type="text"/>	Disabled ▼
Zone7	<input type="text"/>	Disabled ▼
Zone8	<input type="text"/>	Disabled ▼

- **Receiver:** The SIP number to receive the message.
- **SIP Message:** The message sent to the designated SIP number when the alarm is triggered.

Alarm Action via SIP Call

To enable the device to make a call when the alarm is triggered, enter the SIP or IP number of the called party. Additionally, you can allow the indoor monitor to sound a siren simultaneously.

Call Setting

Call Number

Zone	Make Call Enable	Alarm Siren
Zone1	Disabled	Enabled
Zone2	Disabled	Enabled
Zone3	Disabled	Enabled
Zone4	Disabled	Enabled
Zone5	Disabled	Enabled
Zone6	Disabled	Enabled
Zone7	Disabled	Enabled
Zone8	Disabled	Enabled

- **Call Number:** The SIP number or IP number to receive the calls when the alarm is triggered.
- **Make Call Enable:** Enable it so that a call will be made to the designated SIP or IP number when the alarm is triggered.
- **Alarm Siren:** Enable it to trigger an alarm siren on the indoor monitor when the alarm is triggered.

Alarm Action via Local Relay

You can select the local relay to be triggered by the alarm.

Local Relay

Zone	Local Relay
Zone1	Disabled
Zone2	Disabled
Zone3	Disabled
Zone4	Disabled
Zone5	Disabled
Zone6	Disabled
Zone7	Disabled
Zone8	Disabled

- **Local Relay:** Enable it if you want the local relay to be triggered with the sensor.

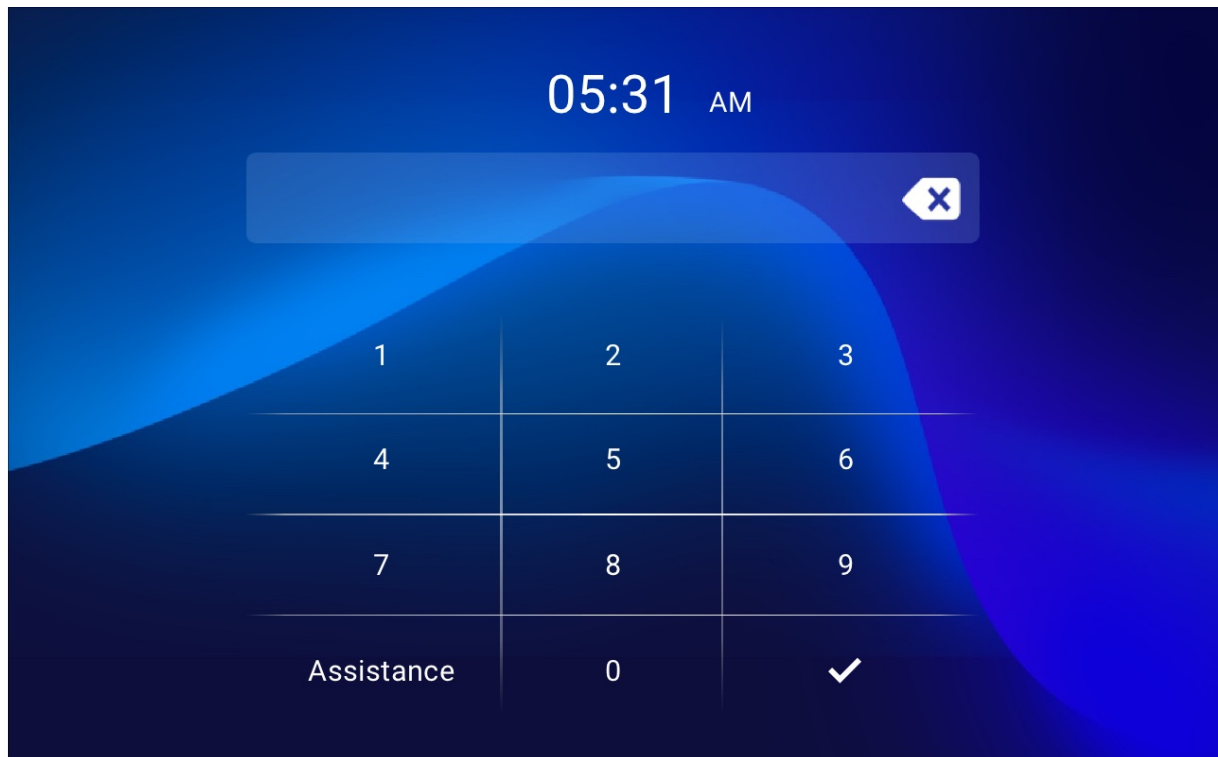

Screen Unlock Setting

To prevent unauthorized access to the device when it is not being used, enable the Screen Lock function. This feature automatically locks the device after a period of inactivity, requiring a password to unlock.

The screen unlock feature can be enabled directly on the device **Settings > Display** screen.

The default PIN code is empty. Tap the ✓ icon to unlock the screen.

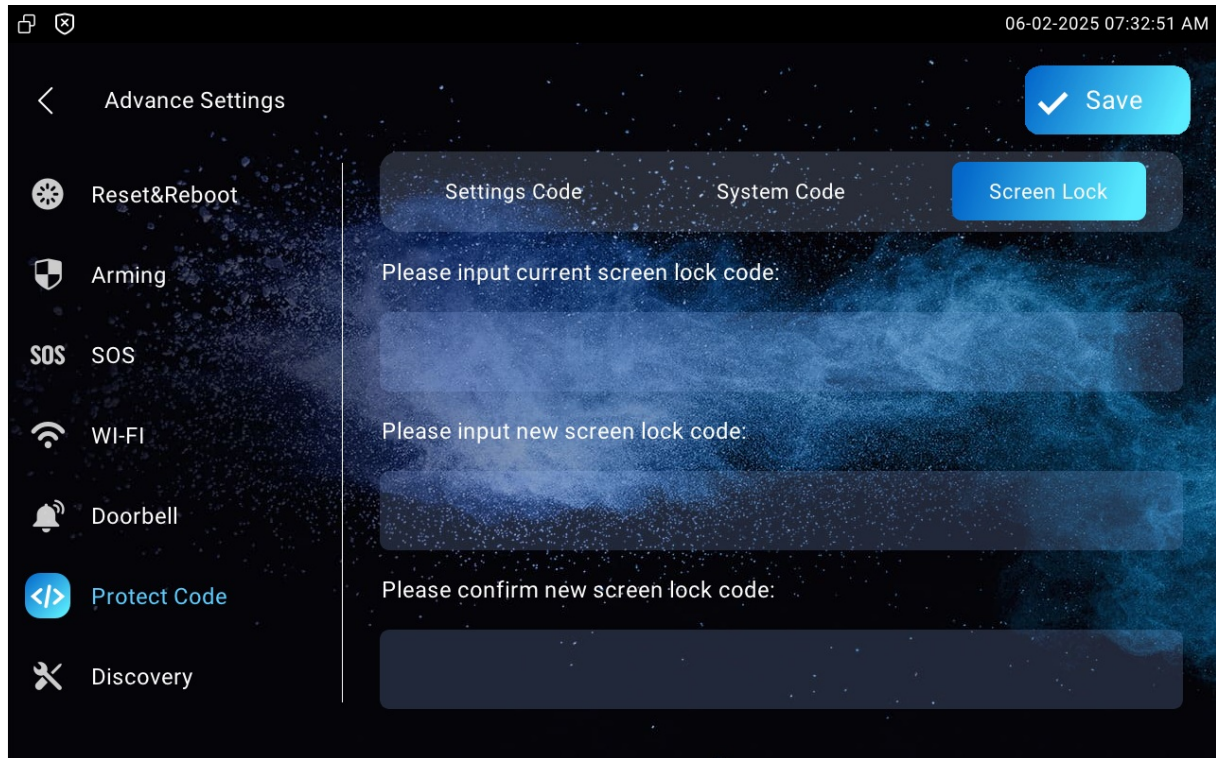

Screen Unlock by PIN Code

To unlock the screen, users need to enter the preset PIN code.

Navigate to the **Settings > Advance Settings > Protected Code** screen and select **Screen Lock** to change a new password.

To change the screen lock password, navigate to the device **Settings > Advance Settings > Protect Code > Screen Lock** screen.

Voice Encryption

Secure Real-time Transport Protocol (SRTP) is a protocol derived from the Real-time Transport Protocol (RTP). It enhances the security of data transmission by providing encryption, message authentication, integrity assurance, and replay protection.

To set it up, navigate to the web **Account > Advanced > Encryption** interface.

- **Voice Encryption:**
 - **Disabled:** The call will not be encrypted.
 - **SRTP(Compulsory):** All audio signals(technically speaking it is RTP streams) will be encrypted to improve security.
 - **SRTP(Optional):** Encrypt the voice from the caller. If the caller also enables SRTP, the voice signals will also be encrypted.
 - **ZRTP(Optional):** The protocol that the two parties use to negotiate the SRTP session key.

Web Interface Automatic Log-out

You can set up the web interface's automatic log-out timing, requiring re-login by entering the user name and the passwords for security purposes or for the convenience of operation.

To set it up, go to the web **Security > Basic > Session Time Out** interface.

Session Time Out	
Session Time Out Value	<input type="text" value="300"/> (60~14400Sec)

Power Output Setting

The indoor monitor can serve as a power supply to the Akuvox door phone with 12V power supply for example E10. You can enable the power output, then connect the door phone to the RJ45 port on the indoor monitor. Also, you can connect E10 to the 12_out port for the power supply.

To enable it, navigate to the web **Settings > Basic > Power Output Enable** interface.

Power Output Setting	
Power Output Enable	<input type="text" value="Disabled"/> ▼
<small>When the Power Output function is set to enabled, and the PON interface is connected with some particular exchanger, it may cause the device reboots repeatedly.</small>	

High Security Mode

High security mode is designed to enhance the security. It employs encryption across various facets, including the communication process, door opening commands, password storage methods, and more.

To set it up, navigate to the web **Security > Basic** interface.

High Security Mode	
Enabled	<input checked="" type="checkbox"/>

Important Notes

1. The High Security mode is off by default when you upgrade the device from a version without the mode to one with it. But if you reset the device to its factory settings, the mode is on by default.

2. This mode makes the old version tools incompatible. You need to upgrade them to the following versions or higher to use them.

- PC Manager: 1.2.0.0
- IP Scanner: 2.2.0.0
- Upgrade Tool: 4.1.0.0
- SDMC: 6.0.0.34

3. The supported HTTP format for relay triggering varies depending on whether high secure mode is enabled or disabled.

If the mode is on, the device only accepts the new HTTP formats below for door opening.

- `http://username:password@deviceIP/fcgi/OpenDoor?action=OpenDoor&DoorNum=1`
- `http://deviceIP/fcgi/OpenDoor?action=OpenDoor&DoorNum=1`

If the mode is off, the device can use both the new formats above and the old format below:

- `http://deviceIP/fcgi/do?action=OpenDoor&UserName=username&Password=password&DoorNum=1`

4. It is not allowed to import/export configuration files in tgz. format between a device with the high security mode and another one without it. For assistance with file transfer, please contact Akuvox technical support.

Lift Control

Users can summon a lift via the lift control feature.

Configure Lift Control

Before setting the Lift icon, you need to display it on the Home or More screen.

To display the icon, go to the **Device > Display Setting** interface.

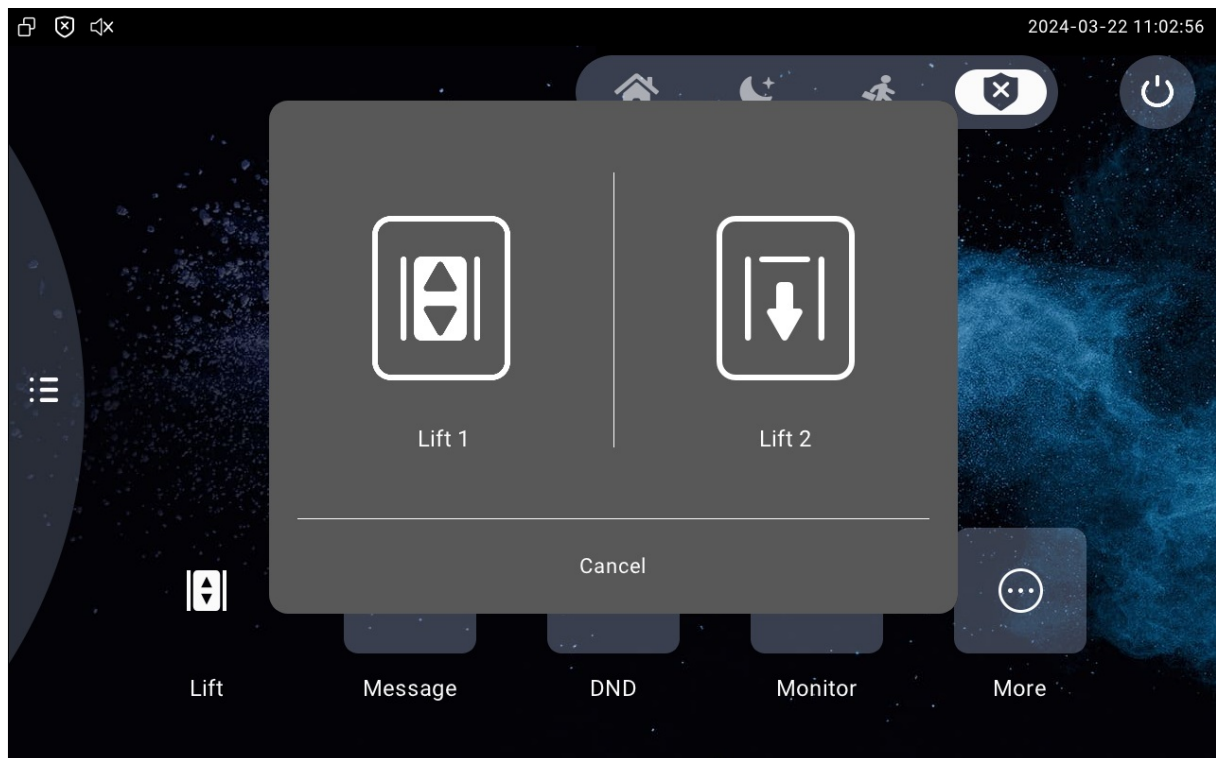

Area	Type	Value	Label	Icon(max size:100*100)
Area1	Lift		Lift	Not selected any files Select File Delete
Area2	Message		Message	Not selected any files Select File Delete
Area3	DND		DND	
Area4	Monitor		Monitor	Not selected any files Select File Delete

To set the Lift icon, go to the web **Device > Lift > Lift Control** interface.

Name	Status	Icon	Label	Http Command
Lift1	Disabled	Up	Lift 1	http://
Lift2	Disabled	Down	Lift 2	http://

- **Status:** Enable or disable the lift button.
- **Icon:** Decide the button icon.
- **Label:** Name the button.
- **HTTP Command:** Select http:// or https:// for the head of the HTTP command and enter the HTTP command.

Users can tap the icon to summon or send a lift.

Note

Click [here](#) to view the detailed configuration of lift control on indoor monitors.

Configure Lift Control Prompt

When the lift controller receives the HTTP command, it will give feedback on the current lift status with a prompt.

To set it up, navigate to the web **Device > Lift > Hints** interface. Click **+Add** to add a prompt and click the **Edit** icon to modify the desired prompt.

If there are huge amounts of prompts that need to be added, you can click the **Export** tab to export a template and import the file after editing. The export file is in TGZ file and the import file should be in XML file.

Hints

Auto-provisioning via Configuration File

Provisioning Principle

Auto-provisioning is a feature used to configure or upgrade devices in batch via third-party servers. **DHCP, PNP, TFTP, FTP, and HTTPS** are the protocols used by the Akuvox devices to access the URL of the address of the third-party server which stores configuration files and firmware, which will then be used to update the firmware and the corresponding parameters on the device.

Please see the flow chart below:

Introduction to the Configuration Files for Auto-Provisioning

Configuration files for auto-provisioning come in two formats: general configuration files and MAC-based configuration files.

Differences:

- **General Configuration Provisioning:**

A general configuration file is stored on a server, allowing all related devices to download the same file to update parameters.

- **MAC-Based Configuration Provisioning:**

MAC-based configuration files are specific to individual devices, identified by their unique MAC addresses. Files named with the device's MAC address will be matched automatically before downloading for provisioning.

Note

- Configuration files must be in CFG format.
- The name of the general configuration file for batch provisioning varies by model.
- The MAC-based configuration file is named after its MAC address.
- Devices will first access general configuration files before the MAC-based ones if both types are available.

You may click [here](#) to see the detailed format and steps.

Autop Schedule

Akuvox provides you with different AutoP methods that enable the device to perform provisioning for itself according to the schedule.

To set up the schedule, go to the web **Upgrade > Advanced > Automatic Autop** interface.

Automatic Autop

Mode	Power On ▼
Schedule	Sunday ▼
	22 (0~23Hour)
	0 (0~59Min)
Clear MD5	Clear
Export Autop Template	Export

- **Mode:**
 - **Power On:** The device will perform Autop every time it boots up.
 - **Repeatedly:** The device will perform Autop according to the schedule you set up.
 - **Power On + Repeatedly:** Combine **Power On** mode and **Repeatedly** mode that will enable the device to perform Autop every time it boots up or according to the schedule.
 - **Hourly Repeat:** The device will perform Autop every hour.

Static Provisioning Configuration

You can manually set up a specific server URL for downloading the firmware or configuration file. If an auto-provision schedule is set up, the device will perform the auto-provisioning at a specific time according to the auto provision schedule you set up. In addition, TFTP, FTP, HTTP, and HTTPS are the protocols that can be used for upgrading the device firmware and configuration.

To download the template, go to the **Upgrade > Advanced > Automatic Autop** interface.

Automatic Autop

Mode	Power On ▼
Schedule	Sunday ▼
	22 (0~23Hour)
	0 (0~59Min)
Clear MD5	Clear
Export Autop Template	Export

To set up the server, go to the **Upgrade > Advanced > Manual Autop** interface.

Manual Autop

URL	<input type="text"/>
Username	<input type="text"/>
Password	<input type="password" value="*****"/>
Common AES Key	<input type="password" value="*****"/>
AES Key(MAC)	<input type="password" value="*****"/>

 AutoP Immediately

- **URL:** Specify the TFTP, HTTP, HTTPS, or FTP server address for the provisioning.
- **Username:** Enter the username if the server needs a username to be accessed.
- **Password:** Enter the password if the server needs a password to be accessed.
- **Common AES Key:** It is used for the intercom to decipher general Autop configuration files.
- **AES Key (MAC):** It is used for the intercom to decipher the MAC-based Autop configuration file.

Note

- AES as one type of encryption should be configured only when the config file is encrypted with AES.
- Server Address Format:
 - TFTP: tftp://192.168.0.19/
 - FTP: ftp://192.168.0.19/(allows anonymous login)
ftp://username:password@192.168.0.19/(requires a user name and password)
 - HTTP: http://192.168.0.19/(use the default port 80)
http://192.168.0.19:8080/(use other ports, such as 8080)
 - HTTPS: https://192.168.0.19/(use the default port 443)

Tip

Akuvox does not provide user specified server. Please prepare TFTP/FTP/HTTP/HTTPS server by yourself.

PNP Configuration

Plug and Play (PNP) is a combination of hardware and software support that enables a computer system to recognize and adapt to hardware configuration changes with little or no intervention by a user.

Click [here](#) to watch the configuration video.

To enable the function, go to the **Upgrade > Advanced > PNP Option** interface.

PNP Option	
PNP Config Enabled	<input checked="" type="checkbox"/>

Call Logs

To check calls—including dial-out, received, and missed calls—within a specific period, you can view the call log on the device's web interface. If needed, you can also export the call log from the device.

To set it up, navigate to the web **Contacts > Call Log** interface.

Call Log

Capture Enable: Enabled

Capture Delay (Sec): 5

Call History: All

Export Hang Up

Index	Type	Date	Time	Local Identity	Name	Number

Network Detection

The network detection feature allows for troubleshooting network problems quickly.

Go to the **Settings > Network Detection** screen.

- **Diagnose:** Tap to start detection.
- **Status:** Display a loading icon when the detection starts; display ✓ for normal results and X for abnormal results.
- **Details:** Tap to view the detection details.

Integration with Third-party Devices

Smart Living Setting

You can control the home sensor through an HTTP command.

To set it up, go to the web **Device > Smart Living** interface.

Smart Living					
Name	Status	Icon	Label	Http Command	
Button1	Disabled ▼	Scene ▼	Button1	http:// ▼	
Button2	Disabled ▼	Scene ▼	Button2	http:// ▼	
Button3	Disabled ▼	Scene ▼	Button3	http:// ▼	
Button4	Disabled ▼	Scene ▼	Button4	http:// ▼	
Button5	Disabled ▼	Scene ▼	Button5	http:// ▼	
Button6	Disabled ▼	Scene ▼	Button6	http:// ▼	
Button7	Disabled ▼	Scene ▼	Button7	http:// ▼	
Button8	Disabled ▼	Scene ▼	Button8	http:// ▼	

- **Status:** Enable or disable this button. If disabled, the button won't appear on the home control screen.
- **Icon:** If **Scene** is selected, the icon is displayed as . If **Light** is selected, the icon will be .
- **Label:** Customize the button display name.
- **HTTP command:** Set the HTTP command to trigger the sensor.

Note

To configure Smart Living button, go to the **Device > Display Setting** web interface.

Integration with Control 4

You need to enable the Control 4 mode before you can integrate the device with the Control 4 home center. To enable it, go to **Network > Advanced > Connect Setting** mode.

Integration via External Relay

Users can control akubela or third-party smart home devices on the indoor monitor through an external relay controller.

To set it up, go to **Device > External Relay** interface.

External Relay

External Relay Type

Akuvox-MK485-G2R-8J8C V3.0

External Relay Mode

RS485

Key	Status	Relay Function	Hold Delay	Display Name
External Relay1	Disabled	Light	Never	Light
External Relay2	Disabled	Shutter Gate-Up	Never	Shutter Gate
External Relay3	Disabled	Shutter Gate-Down	Never	Shutter Gate
External Relay4	Disabled	Shutter Gate-Pausing	Never	Shutter Gate
External Relay5	Disabled	Light	Never	Light
External Relay6	Disabled	Light	Never	Light
External Relay7	Disabled	Door	3	Door
External Relay8	Disabled	Others	3	Others

- **External Relay Type:** Select the external relay type.
- **External Relay Mode:** Set the external relay mode based on its connection with the indoor monitor.
- **Status:** Enable/disable the relay.
- **Relay Function:** Set the relay function based on the smart home devices connected.

- **Hold Delay:** Specify the relay reset time from 1 to 60 seconds. **Never** means it keeps activated once it is triggered. By default, it is 3 seconds for Door and Others relay functions and Never for other functions.
- **Display Name:** Set the tab's name displayed on the indoor monitor's External Relay screen.

Note

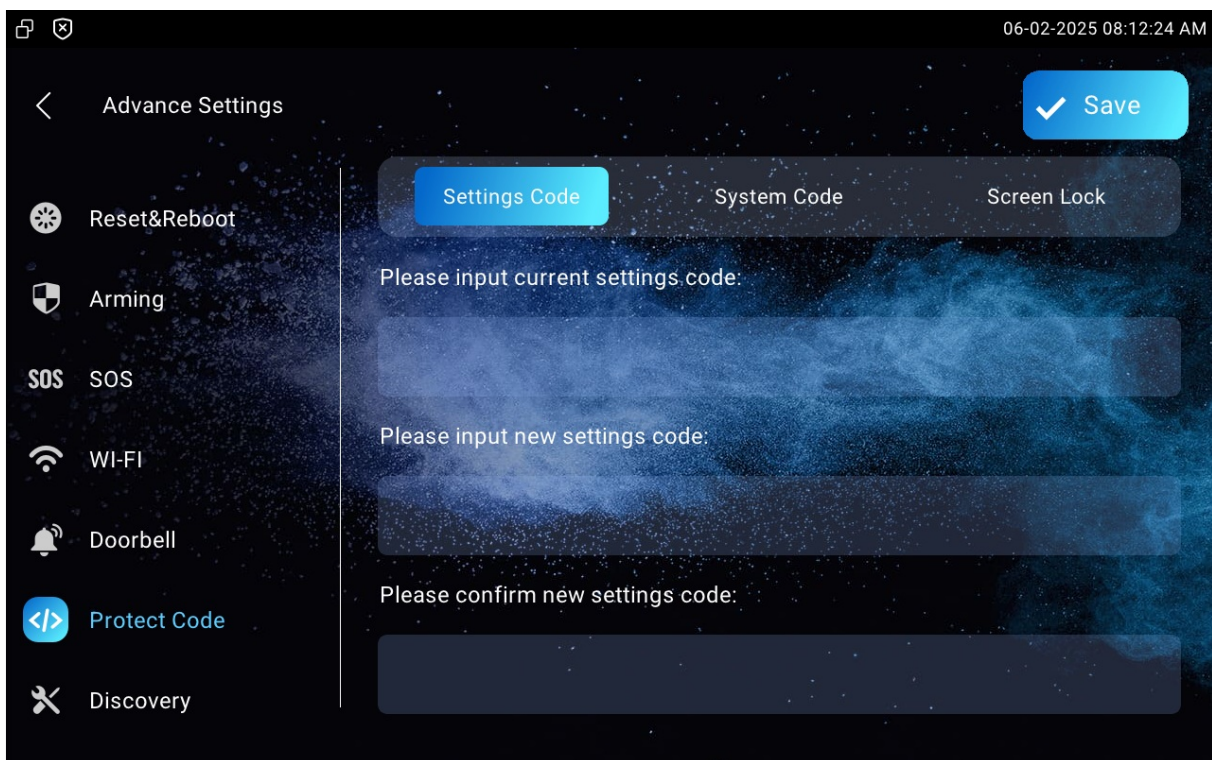

- To display the External Relay button on the home screen, set it up on the **Device > Display Setting** interface.
- Click [here](#) to view the detailed configuration of the external relay feature.

Password Modification

Modify Device Basic Setting Password

Settings Code is used to access the device's basic settings. The default is 123456.

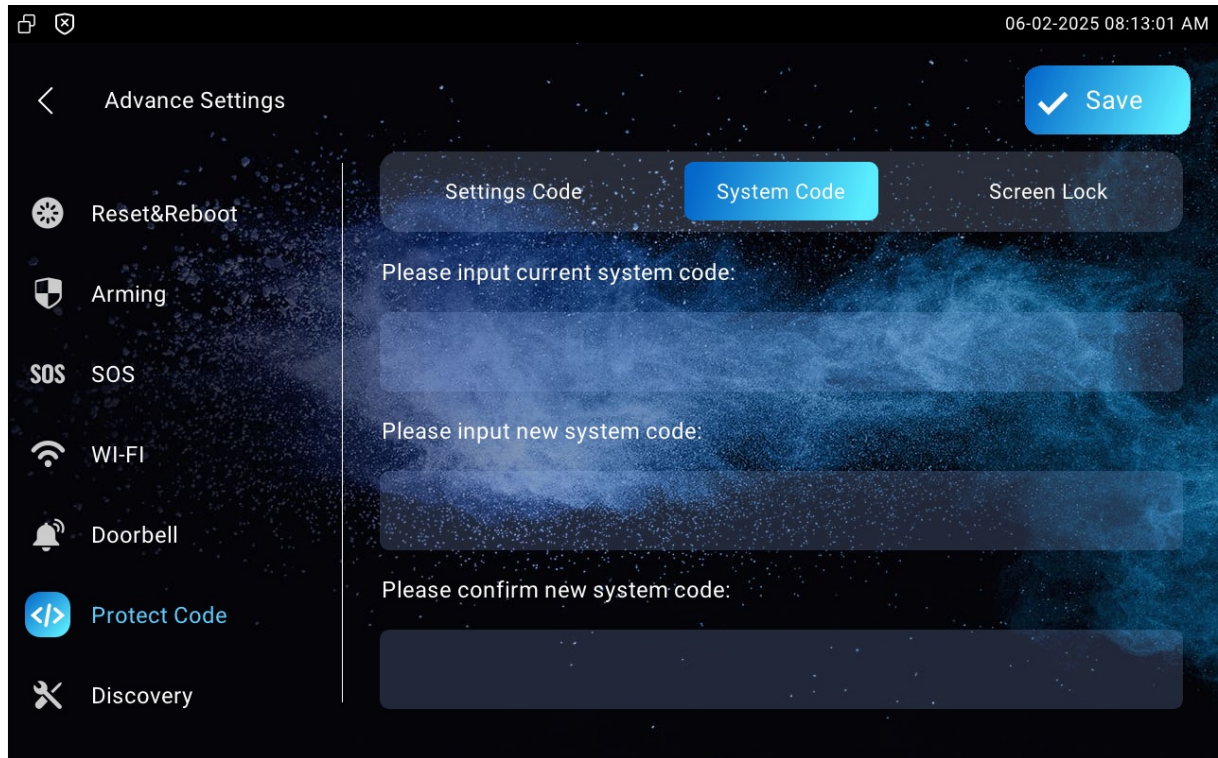

To modify it, go to the **Settings > Advance Settings > Protect Code** screen and select **Settings Code**.

Modify Device Advance Setting Password

This password is used to enter the advance settings of the device, including password settings, account numbers, SOS numbers, network settings, etc. The default password is 123456.

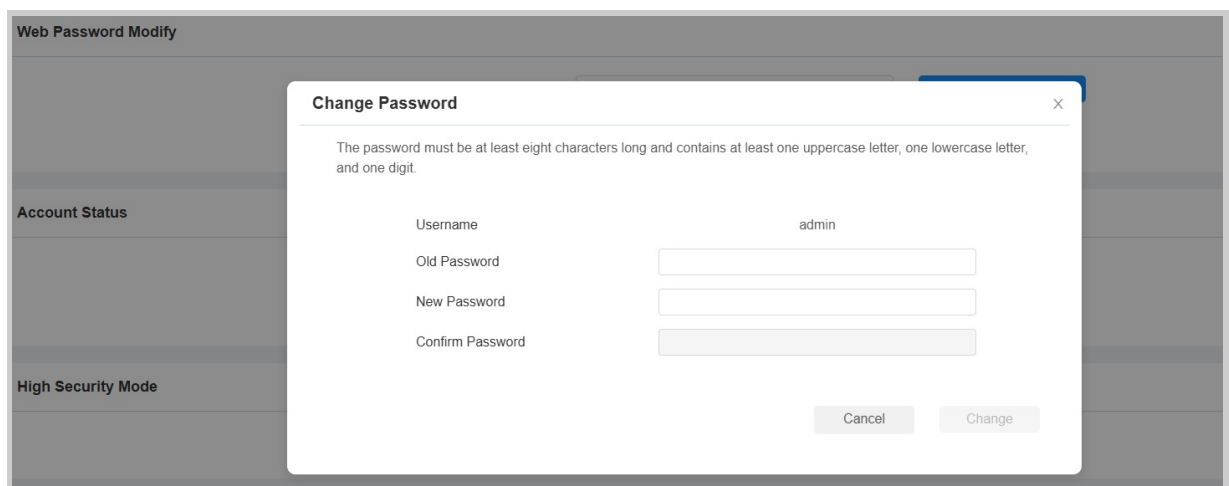

To modify it, navigate to the **Settings > Advance Settings > Protected Code** screen and select **System Code**.

Modify Device Web Interface Password

Select **Admin** for the administrator account and **User** for the user account. Click the **Change Password** tab to change the password.

To set it up, navigate to the **Security > Basic > Web Password Modify** interface.

You can enable or disable the user account on the **Security > Basic** interface.

Account Status		
	admin	Enabled
	user	<input type="checkbox"/>

Note

There are two accounts, one is admin, its password is admin, the other is user, and its password is user.

Modify Security Questions

Security questions allow you to reset the web password if you forget it. After setting up the security questions, you can click "Forget Password" on the login interface, enter the answers, and a password reset window will pop up.

If you do not set up the security questions, clicking "Answer security questions" will prompt you to "Please contact your service provider".

Set it up on the **Security > Basic > Web Password Modify** interface.

Web Password Modify		
Username	admin	<input type="button" value="Change Password"/>
	<input type="button" value="Modify Security Question"/>	

You are required to fill in the correct password before setting the new password.

System Reboot & Reset

Reboot

Reboot on the Device

If you want to reboot the system setting of the device, you can operate it directly on the device setting screen or on the device web interface.

To restart the system on the device, go to **Settings > Advance Settings > Reset&Reboot** screen.

Reboot on the Web Interface

You can reboot the device on its web interface and set a reboot schedule.

Reboot the device on the web **Upgrade > Basic** interface.

Basic

Firmware Version	565.30.10.104
Hardware Version	565.0.2.0.1.0.0.0
Upgrade	 Import
Reset To Factory Setting	 Reset
Except the start-up settings	<input type="checkbox"/>
Reset Config To Factory Setting	 Reset
Reboot	 Reboot

To set up the device restart schedule, go to the **Upgrade > Advanced > Reboot Schedule** interface.

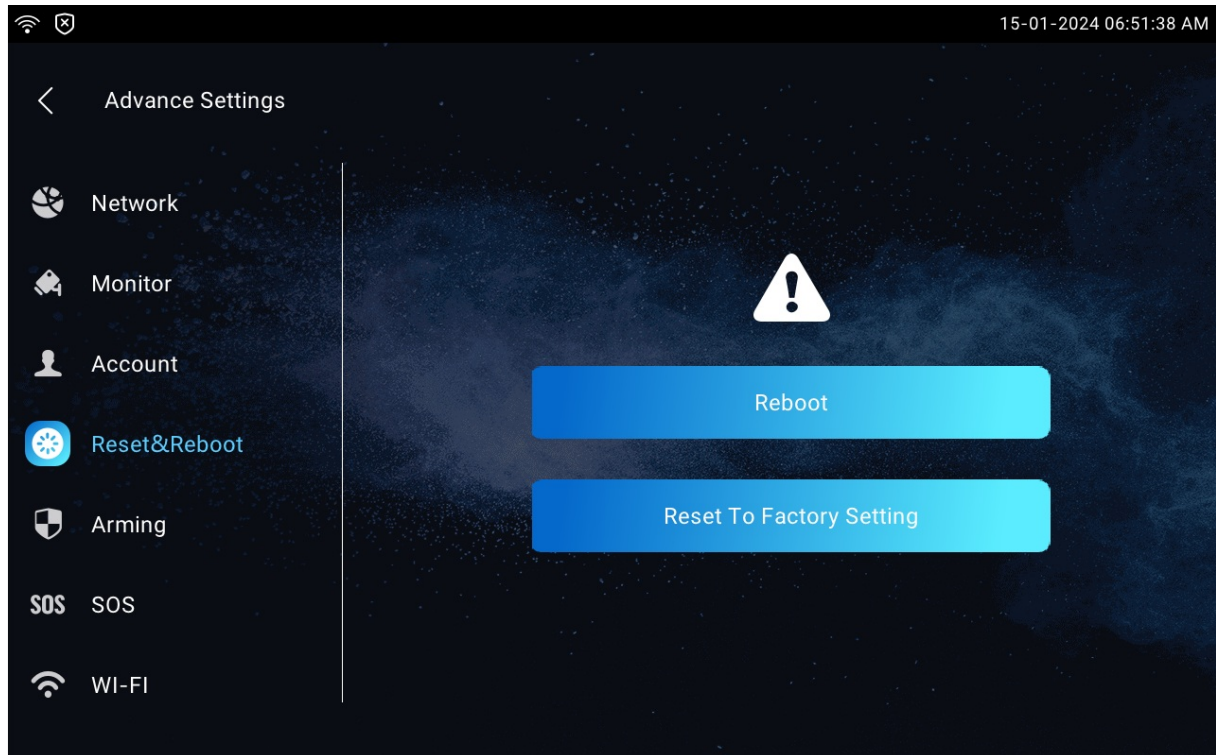

Reboot Schedule

Mode	<input type="checkbox"/>
Schedule	<div>Every Day</div> <div>0 (0~23Hour)</div>

Reset

Reset on the Device

Reset the device on the **Settings > Advance Settings > Reset&Reboot** screen.

Reset on the Web Interface

The device system can also be reset on device web interface without approaching the device. If you only want to reset the configuration file to the factory setting, you can click **Reset Config**.

Go to the web **Upgrade > Basic** interface. If you only want to reset the configuration file to the factory setting instead of the whole device system, click **Reset Config To Factory Setting**.
